1 Responses to Comments on the Draft EIR

1.1 Purpose of the Response to Comments on the Draft FIR

This section contains responses to comments received on the Draft Environmental Impact Report (EIR) prepared for the Amare Apartment Homes Project (proposed project). The Draft EIR identifies the likely environmental consequences associated with implementation of the proposed project. This document, together with the Draft EIR, constitutes the Final EIR for the proposed project.

1.2 Environmental Review Process

Pursuant to the California Environmental Quality Act (CEQA), lead agencies are required to consult with public agencies having jurisdiction over a proposed project and to provide the general public with an opportunity to comment on the Draft EIR.

On January 21, 2022, the City of Martinez circulated a Notice of Preparation (NOP) for a 30-day comment period to request input on the types of impacts that could result from the proposed project. The Draft EIR was made available for public review for a 46-day comment period that began on July 15, 2022 and ended on August 29, 2022. The Notice of Availability of a Draft EIR was posted with the County Clerk, sent to the State Clearinghouse, published on the City website, published in the Martinez News-Gazette on July 15, 2022, and mailed to responsible agencies.

1.3 Comments and Responses

This section includes written comments received during the circulation of the Draft EIR prepared for the project, and responses to those comments.

The City of Martinez received 15 comment letters on the Draft EIR. The commenters and the page number on which each commenter's letter appear are listed below. Copies of written comments received during the comment period are included in Chapter 2 of this document.

Letter No. and Commenter		Page No.

8	Joseph Zumbo	15
9	Richard and Dianna Jensen	16

Response to Comments on the Draft EIR

Lette	Letter No. and Commenter	
10	Richard Johnson and Sharon Tom	18
11	Roni Sweek	19
12	William Cameron	21
13	Dianna Jenson	24
14	Gavin McCreary, Project Manager, Department of Toxic Substances Control	28
15	Todd A. Williams, Director, Fennemore Wendel	30

The comment letters and responses follow. The comment letters have been numbered sequentially and each separate issue raised by the commenter, if more than one, has been assigned a number. The responses to each comment identify first the number of the comment letter, and then the number assigned to each issue (Response 1.1, for example, indicates that the response is for the first issue raised in comment Letter 1).

In some cases, specific changes to the text of the Draft EIR have been made in response to comments received. In no case do these revisions involve new significant impacts or a substantial increase in the severity of impacts identified in the Draft EIR. Where revisions to the main text are called for, the page and paragraph are set forth, followed by the appropriate revision. Added text is indicated with <u>underlined</u> and deleted text is indicated with <u>strikeout</u>. Page numbers correspond to the page numbers of the Draft EIR.

COMMENTER: Kathryn Hart, Water Resource Control Engineer, San Francisco Bay Regional

Water Quality Control Board

DATE: July 17, 2022

Response 1.1

The commenter states that the Hydrology and Water Quality section of the EIR was not available. Thus, comments on whether all issues relative to stormwater management and drainage were adequately addressed were unable to be provided.

As discussed in Section 1.4, *Issues Not Studied in Detail in the EIR*, there was no substantial evidence that significant impacts would occur to Hydrology and Water Quality. Findings and determinations pertaining to Hydrology and Water Quality are discussed within Appendix IS, *Initial Study*, of the Draft EIR.

Response 1.2

The commenter states that the proposed mitigation for impacts to wetlands and water resources is not acceptable, as the preferred Water Board mitigation approach regarding State aquatic resources is on-site and in-kind. The commenter notes that if off-site or out-of-kind mitigation is needed, then the mitigation requirements increase to values greater than 2:1 and would require the creation of new riparian habitat to comply with the State's no-net-loss policy for wetlands and water resources.

Impact BIO-2 in Section 4.2, *Biological Resources*, of the Draft EIR evaluates whether the project would have a substantial impact on any riparian habitat or other sensitive natural community identified in any local, regional, state or federal plans or policies and impacts were found to be less than significant with mitigation. The existing riparian habitat located onsite includes 0.45 acre of seasonal drainage ditch, including 0.07 acre of willow riparian woodland which is considered a sensitive natural community by the California Department of Fish and Wildlife. However, this drainage ditch is relatively small, isolated from other natural habitats, and is adjacent to a heavily trafficked freeway.

Mitigation Measure BIO-2 would ensure that the project would be in compliance with the State's no-net-loss policy by requiring the project applicant to purchase credits at a Regional Water Quality Control Board- and California Department of Fish and Wildlife approved mitigation bank for creation or enhancement of sensitive natural communities at a 2:1 ratio. Impacts to the seasonal drainage ditch shall be offset through purchase of credits at a RWQCB- and CDFW-approved mitigation bank at a ratio of 1:1. If the project falls outside of RWQCB and CDFW-approved mitigation bank service areas, impacts to sensitive natural communities shall be offset through habitat restoration and/or enhancement at an off-site location at a ratio of 2:1 (habitat restored and/or enhanced to habitat impacted) for riparian woodlands and ratio of 1:1 for seasonal drainage ditch. Off-site mitigation was chosen as it may provide higher quality habitat than that of the existing drainage ditch.

The comment has been noted and passed onto decision makers for their consideration.

Response 1.3

The commenter suggests that the Draft EIR be revised to reflect the requirements of the Water Board, as any impact to aquatic resources would require a permit under the federal 401 quality

Amare Apartment Homes Project

certification program or under the Porter Cologne Water Quality Control Act under Waste Discharge Requirements.

Impact BIO-3 in Section 4.2, *Biological Resources*, of the Draft EIR evaluates whether there would be a substantial adverse effect on State or federally protected wetlands through direct removal, filling, hydrological interruption, or other means. As stated under Impact BIO-3, the seasonal drainage ditch may be considered waters of the State and thus may fall under the jurisdiction of the Regional Water Quality Control Board under the Porter-Cologne Act. The areas up to the top of the bank, as well as riparian vegetation to the outer dripline of the riparian community, would also be subject to jurisdiction of the California Department of Fish and Wildlife pursuant to California Fish and Game Code Section 1600 et seq.

Mitigation Measure BIO-3a would be required to complete an aquatic resources delineation to identify areas where the project will result in fill to wetlands, drainages, riparian habitats, or other areas that may fall under the jurisdiction of the USACE, CDFW, and/or RWQCB. The results of that delineation report will be submitted to the appropriate implementing agency. Additionally, Mitigation Measure BIO-3b requires that impacts to the seasonal drainage ditch be offset through purchase of wetland/waters mitigation credits at an agency-approved mitigation bank at a minimum 1:1 ratio. As stated, additional mitigation may be required under specific agency permits such as a permit under the 401 Water Quality Certification and Wetland Program or Porter-Cologne Act Water Quality Control Act Waste Discharge Requirements.

COMMENTER: Chris Elliot, P.E., District Engineer, Mountain View Sanitary District

DATE: August 10, 2022

Response 2.1

The commenter states that the topic of Utilities and Service Systems was not studied in detail in the Draft EIR and was addressed in the project's Initial Study. The commenter states that Mountain View Sanitary District does not have specific comments on the Draft EIR.

As discussed in Section 1.4, *Issues Not Studied in Detail in the EIR*, there was no substantial evidence that significant impacts would occur to Utilities and Service Systems. Findings and determinations pertaining to Utilities and Service Systems are discussed within Appendix IS, *Initial Study*, of the Draft EIR.

This comment is noted and does not require revisions to the Draft EIR.

COMMENTER: Elissa Hemauer

DATE: July 15, 2022

Response 3.1

The commenter states that the proposed project will not be within the district boundaries of the Martinez Unified School District (MUSD) but will be within the Mount Diablo Unified School District (MDUSD) boundaries. The commenter expresses concerns about the impacts of the increase in student population from the proposed project and other housing projects, such as the Pine Meadows Housing Project, that are within the MDUSD boundaries.

Please refer to Appendix IS, *Initial Study*, in the Draft EIR, which analyzes increased population induced by the project and access to public services such as schools. The commenter is correct in stating that the proposed project is located in Mount Diablo Unified School District. The correction has been made in the Initial Study and listed in Section 2 (Amendments to Draft EIR) below.

The project applicant would be required to pay school development fees, as dictated by state law, prior to the issuance of building permits. According to Government Code Section 65996 (3)(h), payment of such fees constitutes full mitigation of any school impacts under CEQA. Therefore, any impacts from the increase in school enrollment would be offset by the payment of development fees. The proposed project is anticipated to generate 86 school-aged residents. As of 2020, Mount Diablo Unified School District has a total capacity of 34,411 students and had an excess 3,687 seats available between elementary, middle and high schools within the district (Mount Diablo Unified School District 2020). It is not expected that the proposed project with other anticipated housing projects within the district would exceed school capacities.

Response 3.2

The commenter states that while the Draft EIR addresses impacts to pedestrians and traffic at the intersection of Arnold Drive and Starflower Drive, the document does not address these impacts at the intersection of Arnold Drive and Glacier Drive or other surrounding roads such as Pacheco Boulevard.

Please refer to Section 4.6, *Transportation*, for a full analysis of traffic impacts.

Under Impact TRA-3, it is stated that the primary source of additional traffic on or near Starflower Drive would be the addition of a driveway into the proposed project. There would be three lanes that would allow for the safe flow of traffic: one lane providing ingress, one left-turn lane providing egress to Arnold Drive, and one right-turn lane providing egress to Arnold Drive. The proposed driveway would not create a sharp curve or a dangerous intersection, and the driveway would not substantially increase hazards. It is also stated that the proposed project would likely result in pedestrians crossing Arnold Drive at its intersection with Starflower Drive. While pedestrian crossing may be minimal, there is currently no marked crosswalk, there are no traffic controls adjacent to the site, and speeding has been observed to occur in the area. For these reasons, Mitigation Measure TRA-2 has been included in the proposed project. Implementation of Mitigation Measure TRA-2 would involve narrowing the travel lanes on Arnold Drive, which would reduce motorist speeds and enhance pedestrian safety.

Amare Apartment Homes Project

Response to Comments on the Draft EIR

Impacts to other surrounding intersections were not detailed in the Draft EIR as it was found that the proposed project would not have a significant impact to the streets named by the commenter, besides Arnold Drive and Starflower Drive. Mitigation measures have been included to reduce the transportation impacts to both of these streets.

The comment has been noted and will be passed onto decisionmakers for their consideration.

COMMENTER: Elizabeth Wahl-Polivka

DATE: July 15, 2022

Response 4.1

The commenter expresses concern over impacts pertaining to increased class sizes, quality of learning, and school investment.

This comment is similar to Comment 3.1. Please refer to Appendix IS, *Initial Study*, in the Draft EIR, and Response 3.1 which analyzes increased population induced by the project and access to public services such as schools. As discussed in Section 15, *Public Services*, of the Initial Study, the project site is located in the Mount Diablo Unified School District and would generate approximately 86 students. The project applicant would be required to pay school development fees, as dictated by state law, prior to the issuance of building permits. According to Government Code Section 65996 (3)(h), payment of such fees constitutes full mitigation of any school impacts under CEQA. Therefore, any impacts from the increase in school enrollment would be offset by the payment of development fees.

As of 2020, Mount Diablo Unified School District has a total capacity of 34,411 students and had an excess 3,687 seats available between elementary, middle and high schools within the district (Mount Diablo Unified School District 2020). The proposed project would not exceed school capacities within the district.

Response 4.2

The commenter notes that the proposed project may increase automotive and pedestrian traffic, and that there is not an adequate distribution of stop signs for pedestrian and automotive safety in the project area.

As noted in Section 4.6, *Transportation*, Mitigation Measure TRA-2 would be required to increase pedestrian and automotive safety. Mitigation Measure TRA-2 would involve narrowing the travel lanes on Arnold Drive, which would reduce motorist speeds and enhance pedestrian safety.

Response 4.3

The commenter states concern over maintaining affordability and a high-quality of life for existing residents.

Affordability and quality of life are not CEQA issues and thus, are not discussed in the Draft EIR. No changes to the Draft EIR are required. The comment is noted and will be passed onto decision makers.

COMMENTER: Richard Jensen

DATE: August 15, 2022

Response 5.1

The commenter states that the Cumulative Projects List, Table 3-1 on page 3-2 of the Draft EIR, does not include the DeNova Pine Meadows project. The commenter states that the Telfer property would be a better alternative site than the proposed project.

The Cumulative Projects List includes the DeNova Pine Meadows project, which was renamed Traditions at the Meadows and is shown as Project 4 in Table 3-1.

As discussed in Section 6, *Alternatives*, Alternative 4 would involve construction of the proposed six apartment buildings on a 6.1-acre site near the intersection of Foster Street and Berrellesa Street on APN 372-400-006 (which the commenter referred to as the Telfer property). As discussed under Section 6.4 on pages 6-7 through 6-11 of the Draft EIR, Alternative 4 would be environmentally superior to the proposed project for aesthetics, biological resources, noise, and transportation. However, Alternative 4 would result in greater environmental impacts associated with hazards and hazardous materials, due to the site's listing on state hazardous materials databases, and greater sensitivity for cultural and tribal cultural resources, due to its proximity to the Carquinez Strait. Furthermore, this alternative may not be feasible because the applicant's ability to purchase the property considered under Alternative 4 cannot be assured.

Response 5.2

The commenter states that the John Muir Parkway Specific Area Plan is referred to as Appendix SAP in the Draft EIR but Appendix SAP is not included in the Draft EIR.

Appendix SAP was mistakenly omitted from the Draft EIR. Upon submitting this comment, the commenter was provided with a link to the John Muir Parkway Specific Area Plan (JMPSAP), which is available at the City's website here:

https://martinezcityofca.prod.govaccess.org/home/showdocument?id=2697&t=637946185594893483.

The JMPSAP was adopted as part of the City's 1973 General Plan and has been updated and amended several times since. The John Muir Parkway Specific Area Plan has been available for review on the City's website for several years, including during the review period of the Draft EIR. Therefore, including the JMPSAP for reference in the Final EIR would not constitute the addition of substantial new information and would not require recirculation of the Draft EIR. The JMPSAP is included for reference purposes in the Final EIR as Appendix SAP.

Response 5.3

The commenter expresses concern for the impacts the four-story apartment building may have on the surrounding neighborhood and John Muir Parkway area.

As discussed in Section 11, Land Use and Planning, in the Initial Study (Appendix IS of the Draft EIR), the project would be consistent with the City's General Plan land use designation of Mixed Residential/Office. The project would include a waiver to allow for increased building height under

Response to Comments on the Draft EIR

State Density Bonus laws as it would be inconsistent with the zoning standards established for a Mixed Use District: Multi-Family Residential/Professional and Administrative Offices. The waiver would be subject to approval of the Martinez Planning Commission.

As discussed in Section 4.1, *Aesthetics*, of the Draft EIR, the buildings' height and massing would not conflict with applicable regulations governing scenic quality. As stated therein, the proposed buildings' height and massing would conflict with Martinez Municipal Code Chapter 22.34; however, State Density Bonus Law allows for inconsistency with development standards provided that no adverse impact to public health and safety would occur. Because the project would not result in significant impacts to public health and safety, as demonstrated throughout the Draft EIR, the proposed buildings' height and massing is permissible.

COMMENTER: William Cameron

DATE: August 16, 2022

Response 6.1

The commenter states the Draft EIR wrongly assumes that surface water flows across the site into the existing storm drain system, and that the Draft EIR used incorrect information regarding precipitation depths at the project site. The commenter states that the storm drain systems around the project site are undersized and are routinely overwhelmed with surface water flow. The commenter states that they have observed large amounts of water collecting on the project site during rainy periods, and states that the project would have adverse impacts to hydrology due to the existing drainage that occurs on the project site.

Potential impacts to hydrology are discussed in Section 10, *Hydrology and Water Quality*, of the Initial Study (Appendix IS of the Draft EIR). As discussed therein, the site's existing drainage pattern is currently uncontrolled. A Stormwater Control Plan has been prepared for the proposed project, consistent with C.3 requirements as per the Contra Costa County Clean Water Program Stormwater C.3 Guidebook, which would include a series of coordinated integrated management practices (IMPs) to remove pollutants and slow runoff. The IMPs included in the proposed project consist of either flow-through planters or bioretention facilities, and would be designed to exceed the minimum volume needed to treat and control runoff from all proposed impervious surfaces. Further, the project would include upgrading the existing 48-inch storm drain pipe with a 60-inch pipe, among other infrastructure improvements, which would ensure that the public storm drain infrastructure would continue to function in the current fashion and would be adequately sized to handle 100-year storm events with project implementation. Refer to Appendix HYD, the Supplemental Hydrology and Hydraulic Study, of the Initial Study for further information. Additionally, the City of Martinez Public Works Department would review and approve site plans to ensure adequate drainage prior to project approval.

Response 6.2

Regarding precipitation depths at the project site, the commenter states that the Draft EIR is based on incorrect hydrologic assumptions. The commenter provides a list of flooding or infrastructure failure events that have occurred in the vicinity of the project site for the last several decades.

The commenter does not specify how the flooding or infrastructure failures in the surrounding area are related to the project site or analysis in the Draft EIR. Potential impacts to hydrology and flooding are discussed in Section 10, *Hydrology and Water Quality*, of the Initial Study (Appendix IS of the Draft EIR). As discussed therein, the project would not result in flooding on or offsite or in the redirection of flood flows, and the project site is not located in a flood hazard area as determined by the Federal Emergency Management Agency. No changes to the Draft EIR are warranted.

COMMENTER: Danielle D. Napoleon

DATE: August 21, 2022

Response 7.1

The commenter states that the reduction in parking depth, drive aisle width, building separation, and set back exceptions indicate that the project site is too small to house the proposed project.

This comment is noted and not related to the adequacy or conclusions of the EIR. No revisions to the EIR are required in response to this comment. The comment will be passed on to decisionmakers for their consideration.

Response 7.2

The commenter states that Alternative 3 is unacceptable as there are too many units proposed for the project site and the use of exceptions is inappropriate for the proposed project.

Please refer to Section 6, *Alternatives*, of the Draft EIR for additional detail on each of the alternatives chosen for the proposed project.

Alternative 3, the Reduced Density Alternative, would involve the construction of six three-story apartment buildings on the project site. The three buildings would accommodate a total of 153 total residential units, 30 fewer residential units than included in the proposed project.

The purpose of alternatives in an EIR is to examine the range of reasonable alternatives to a proposed project that would attain most of the basic project objectives. Alternative 3 was chosen as it met the following project objectives:

- Housing: Provide quality housing to accommodate different housing needs
- Implementation of City Plans: Provide housing on an identified Housing Opportunity Site from the City's 2015-2023 Housing Element
- Mobility: Efficiently connect the proposed project uses to freeway access and proximate retail uses while providing safe spaces for pedestrians, cyclists, transit, and motor vehicles along Arnold Drive

Alternative 3 would reduce impacts to noise and aesthetics while meeting the basic objectives of the proposed project. Alternative 3 is considered a reasonably acceptable alternative under CEQA Guidelines Sections 15091 and 15126.6 as it meets the basic project goals and slightly reduces impacts to several impact areas.

Response 7.3

Regarding exceptions, the commenter states that the proposed project should meet the number of parking spaces required under the City of Martinez Municipal Code (MCC) Chapter 22.36.030.

This comment is noted and not related to the adequacy or conclusions of the EIR. No revisions to the EIR are required in response to this comment. The comment will be passed on to decisionmakers for their consideration.

Response 7.4

The commenter states that State density bonus law should not be applied to the proposed project, as it is located in a suburban, residential area.

This comment is noted and not related to the adequacy or conclusions of the EIR. No revisions to the EIR are required in response to this comment. The comment will be passed on to decisionmakers for their consideration.

Response 7.5

The commenter expresses concern about pedestrian safety along Arnold Street, as there is no sidewalk available for pedestrians.

Please refer to Section 4.6, Transportation, for additional detail on pedestrian safety measures.

The proposed project would include the construction of a sidewalk along the southern side of Arnold Drive to provide pedestrian access to the site. The proposed sidewalk would be 7 feet in width and would connect to internal circulations paths within the project site to ensure safe pedestrian access and circulation.

In addition, Mitigation Measure TRA-2 would also contribute to improving pedestrian safety through the provision of shoulders on the project frontage and north side of the street across Arnold Drive.

COMMENTER: Joseph Zumbo

DATE: August 25, 2022

Response 8.1

The commenter expresses concern with the reduction of parking stalls for the proposed project, stating that if the proposed project does not offer adequate parking then residents of the proposed project may need to park on-street or in overflow lots.

Please refer to Section 4.6, *Transportation*, for information on project consistency with City transportation policies and standards. As discussed under Impact TRA-1 in Table 4.6-1, the proposed project would provide 275 parking spaces, which exceeds the 223 spaces required by State density bonus law. Additionally, the project would be consistent with Policy II.B and Policy III.B of the City's General Plan Transportation Element, which require the project to provide off-street parking and discourage parking intrusion.

COMMENTER: Richard and Dianna Jensen

DATE: August 28, 2022

Response 9.1

The commenters state that Mitigation Measure AES-2 is not appropriate for the proposed project as a four-story building and 10-foot setback from Arnold Drive is not compatible with the surrounding residential uses. The commenters state that the proposed buildings would not be consistent with the neighborhood's existing visual character just because they would include exteriors and finishes similar to the existing surrounding residential uses, and that allowing building height to be above what is permitted by the zoning code, regardless of exemptions, should not allow the developer to locate buildings arbitrarily within the site.

Because the Draft EIR does not contain mitigation measures in Section 4.1, *Aesthetics*, it is assumed that the commenters are referring to Impact AES-2 on page 4.1-6 of the Draft EIR. This comment is similar to Comment 5.3. Please refer to Response 5.3; as discussed therein, the proposed buildings' height and massing is permissible in accordance with State Density Bonus Law.

Furthermore, the proposed buildings would not be located arbitrarily within the project site; as stated on page 4.1-6 of the Draft EIR, the project would require review and approval from the City's Planning Commission pursuant to Martinez Municipal Code Chapter 22.34. The location of the proposed buildings would be reviewed and approved by the Planning Commission prior to issuance of the required design review permit.

Response 9.2

The commenters state that the proposed project has an inadequate number of parking spaces, and that the project would result in overflow parking on Starflower Drive or Arnold Drive, creating pedestrian hazards. The commenters suggest that an additional traffic study should be done to analyze these potential impacts. The commenters state that the Draft EIR is inconsistent by saying that on-site parking will be inadequate, but also acknowledging that overflow parking may occur on Arnold Drive and Starflower Drive.

This comment is noted and not related to the adequacy or conclusions of the EIR. No revisions to the EIR are required in response to this comment. As discussed below in Section 2, *Amendments to the Draft EIR*, Mitigation Measure TRA-2 has been revised to eliminate the requirements for onstreet parking. Instead, travel lanes on Arnold Drive would be narrowed by either adding a shoulder or adding a bike lane, as narrowing of lanes would reduce motorist speed and enhance pedestrian safety.

Response 9.3

The commenter expresses that the preferred alternative is that which places development nearer to the Amtrak station, allowing potential residents to access public transit, bike lanes, and pedestrian paths. The commenter states that this alternative is superior to the proposed project for these reasons.

This comment is similar to Comment 5.1. Please refer to Response 5.1; as discussed therein, the alternative that would locate development closer to the Amtrak station (Alternative 4) would result

City of Martinez Amare Apartment Homes Project

Amare Apartment Homes Project	Response to Comments on the Draft EIR
in greater environmental impacts to some environmental Furthermore, Alternative 4 may not be feasible as the appalternative site.	

COMMENTER: Richard Johnson and Sharon Tom

DATE: August 28, 2022

Response 10.1

The commenters state that additional traffic from the proposed project would significantly compromise pedestrian safety. The commenter suggests that the proposed project should include widening the roadway to incorporate bike lanes and sidewalks along Arnold Drive. The commenters state that the proposed project should be scaled down to allow for more on-site parking, wider bike lanes, and wider sidewalks.

As discussed below in Section 2, *Amendments to the Draft EIR*, Mitigation Measure TRA-2 has been revised to eliminate the requirements for on-street parking. Instead, a shoulder or a bike lane would be added on Arnold Drive to narrow the vehicle travel lanes, which would reduce motorist speed and enhance cyclist and pedestrian safety. In addition, the project includes constructing sidewalks along Arnold Drive, along the project site's frontage.

Response 10.2

The commenters state that the compound negative effects of the exemptions being requested for the proposed project would place an unfair burden on surrounding neighborhoods. The commenters request that the City allow only the minimum number of exemptions required to reduce impacts to the surrounding neighborhoods and hold the developer accountable for all mitigation.

The waivers and exceptions listed in Section 2.7, Required Approvals, on page 2-8 of the Draft EIR, would all be required to accommodate the project's density as allowed by State Density Bonus law. While the project applicant would be required to take certain actions to comply with the mitigation measures included throughout the Draft EIR, it is the City's responsibility to ensure that all mitigation measures are implemented pursuant to *CEQA Guidelines* Section 15097.

The commenters express an opinion that does not pertain to the analysis or conclusions of the Draft EIR. This comment is noted and will be passed onto decision makers for their consideration.

COMMENTER: Roni Sweek

DATE: August 28, 2022

Response 11.1

The commenter states that they believed the City requirement for proposed higher density developments would require such developments to be compatible with existing neighborhoods. The commenter states that a four-story building with 10-foot setback from Arnold Drive would not be consistent the existing neighborhood of single and two-story homes.

This comment is similar to Comment 5.3. Please refer to Response 5.3; as discussed therein, the proposed buildings' height and massing is permissible in accordance with State Density Bonus Law.

Response 11.2

The commenter states that the on-site parking for the proposed project is inadequate and that overflow parking will intrude on the neighboring communities. The commenter states an opinion that overflow parking should be accommodated on the project site.

This comment is similar to Comment 8.1. Please refer to Response 8.1; as discussed therein, the proposed project would provide 275 parking spaces, which exceeds the 223 spaces required by State density bonus law, and would be consistent with applicable policies from the City's General Plan Transportation Element.

Response 11.3

The commenter states that additional cars on Arnold Drive will increase traffic and extend commute times.

As discussed in Section 4.6, *Transportation*, on page 4.6-3 of the Draft EIR, the metric of vehicle miles traveled (VMT) is used to determine the project's traffic related impacts pursuant to Senate Bill 743, which replaces the metric of level of service. Senate Bill 743 is reflected in the *CEQA Guidelines* Section 15064.3(a), which states a project's effect on automobile delay shall not constitute a significant environmental impact. Therefore, the project's potential impacts to traffic and extended commute times are not subject to review under CEQA.

Response 11.4

The commenter states that the proposed project should blend with existing communities. The commenter states that the proposed project would be better suited in an area near public transportation.

This comment is similar to Comments 5.3 and 5.1. Please refer to Response 5.3 regarding impacts to aesthetics and compatibility with existing communities, and Response 5.1 regarding a project alternative located closer to public transportation. As discussed in Response 5.3, the proposed buildings' massing and height is permissible in accordance with State Density Bonus Law. As discussed in Response 5.1, an alternative to the proposed project closer to public transportation was considered. Alternative 4 would be environmentally superior to the proposed project for aesthetics, biological resources, noise, and transportation. However, Alternative 4 would result in

City of Martinez

Amare Apartment Homes Project

Response to Comments on the Draft EIR

greater environmental impacts associated with hazards and hazardous materials, due to the site's listing on state hazardous materials databases, and greater sensitivity for cultural and tribal cultural resources, due to its proximity to the Carquinez Strait. Furthermore, this alternative may not be feasible because the applicant's ability to purchase the property considered under Alternative 4 cannot be assured.

COMMENTER: William Cameron

DATE: August 29, 2022

Response 12.1

The commenter states that wildfire was not included in the Draft EIR and their statements are in regard to the wildfire section located in the Initial Study. The commenter summarizes the primary wildfire conclusions made in the Initial Study.

This comment does not pertain to the adequacy of the Draft EIR and thus, no changes to the Draft EIR are required.

Response 12.2

The commenter states that High Fire Hazard Severity Zones (HFHSZ) have now been progressed to Local Responsibility Areas (LRA), but work on identifying HFHSZs is still ongoing. The commenter states that it can be challenging to identify when an LRA has a HFHSZ in its most current appropriate designation. The commenter states that CalFIRE has pointed out that HFHSZs and fire risk should not be confused or necessarily equated.

This comment does not address the adequacy of the Draft EIR and thus, no changes to the Draft EIR are required. The comment has been noted and will be passed onto decision makers for their consideration.

Response 12.3

The commenter states that since the publication of the Draft EIR and Initial Study, there has been a fire in the City of Martinez. The fire occurred on August 4, 2022 located near the 4100 block of Pacheco Boulevard that broke the Wildland Urban Interface (WUI) and threatened structures. The commenter notes that winds, upslope conditions and fuels led to the spread of the fire. The commenter states that the topography of the proposed project is similar to that of the area where the recent fire occurred.

This anecdotal information regarding a fire that occurred elsewhere does not constitute substantial new information or change the conclusions of the wildfire analysis. As stated in Section 20, *Wildfire*, of the Initial Study, the project site is not in or near a VHFHSZ or state responsibility area, as the closest VHFHSZ is 2.5 miles west of the site (CAL FIRE 2009). The proposed project would be required to comply with the MMC Chapter 15.28, Fire Prevention Code, which adopts the Contra Costa County Fire Protection District's Fire Prevention Code by reference and includes policies and requirements intended to protect residents of Contra Costa County from potential fire hazard, including requirements for vegetation removal, maintaining adequate water supply, and ensuring emergency access. Preventative measures such as those listed will help to decrease risk of structure and human exposure to fire threats.

The comment has been noted and will be passed onto decision makers for their consideration.

Response 12.4

The commenter notes that SB 63 requires the State Fire Marshal and the Department of Housing and Community Development to extend building codes for Very High Fire Hazard Severity Zones (VHFHSZ). The commenter also states that AB 9 established a program within CalFIRE to support local wildfire protection measures however, CalFIRE studies show that local jurisdictions are only increasing fire risk over the next 30 years.

As stated in Section 20, *Wildfire*, of the Initial Study, the project site is not in or near a VHFHSZ or state responsibility area, as the closest VHFHSZ is 2.5 miles west of the site (CAL FIRE 2009). Additionally, please refer to Response 12.3 for detailed preventative measures, such as compliance with MMC Chapter 15.28, which would reduce wildfire impacts.

Response 12.5

The commenter notes that the Camp Fire introduced the elevated priority of egress planning and modeling from neighborhoods and cities. The commenter states that there have been recent studies done on the importance of egress that consider human decision-making, fire dynamics, and transportation modelling as factors that contribute to wildfire escape. The commenter states an opinion that there are tools in place to better manage fire risks, and it is important that planners hold the line on exemptions that potentially lower fire safety.

Please refer to Section 9, *Hazards and Hazardous Materials*, for additional information on emergency access and egress. As stated in the section, the proposed project would be required to comply with the MMC Chapter 15.28, Fire Prevention Code, which adopts the Contra Costa County Fire Protection District's Fire Prevention Code by reference and includes policies and requirements intended to protect residents of Contra Costa County from potential fire hazard, including requirements for vegetation removal, maintaining adequate water supply, and ensuring emergency access.

Additionally, as discussed in Section 4.6, *Transportation*, under Impact TRA-4, the Contra Costa County Fire Protection District would review and approve the project to ensure that emergency access meets district standards. The Contra Costa County Fire Protection District's review would confirm that the project would not interfere with evacuation routes or impede evacuation plans. Furthermore, the project would be required to provide adequate emergency access pursuant to the 2019 California Building Code. The Contra Costa County Fire Protection District's review would ensure that the project would comply with City and County standards and requirements for emergency access. The two driveways on the project site would allow for adequate egress and provide space for emergency access if or when necessary.

Response 12.6

The commenter states that the proposed project appears to be at a very high risk due to limited egress. The commenter notes that the project is blocked to the east, west, and south and that the driveways along Arnold Drive would be the only viable way out of the project site in the case of a fire. The commenter suggests that the proposed project's limited parking encourages potential residents to use non-automobile egress, while also limiting egress on foot due to its design.

Please refer to Response 12.5 for additional information regarding project driveways providing emergency access and egress from the project site. . All designs would be reviewed by the Contra Costa Fire Protection District to ensure adequate emergency access and egress from the project site.

Response 12.7

The commenter encourages City leaders and others responsible for community safety to consider development that encourages a higher quality of living and higher safety standards.

This comment is not related to the adequacy of the Draft EIR. The comment has been noted and will be passed onto decisionmakers for their consideration.

COMMENTER: Dianna Jensen

DATE: August 29, 2022

Response 13.1

The commenter states that regardless of compliance with the State Density Bonus Law, the number of off-street parking spots allotted to the proposed project is inadequate and does not comply with the City of Martinez Municipal Code. The commenter states that in Impact TRA-3 in Section 4.6, *Transportation*, of the Draft EIR, that use of Arnold Drive for on-street parking would not be accommodating to the surrounding communities, would only have space for a select number of cars, and parking is not currently allowed on the street. The commenter states an opinion that on-street parking creates an additional safety hazard.

This comment is noted and not related to the adequacy or conclusions of the EIR. No revisions to the EIR are required in response to this comment.

As discussed below in Section 2, Amendments to the Draft EIR, Mitigation Measure TRA-2 has been revised to eliminate the requirements for on-street parking. Instead, travel lanes on Arnold Drive would be narrowed by either adding a shoulder or adding a bike lane, as narrowing of lanes would reduce motorist speed and enhance pedestrian safety.

Response 13.2

The commenter notes that some graphics in Section 4.6, *Transportation*, of the Draft EIR are confusing, as the directions of east and west are reversed.

There are no images or graphics provided in Section 4.6, *Transportation*. However, the commenter may be referring to Figure 4.1-1 of Section 4.1, *Aesthetics*, which shows two site photographs. The Draft EIR incorrectly states that these views are oriented southeast and west from Arnold Drive; the views are southwest and east from Arnold Drive. Page 4.1-2 of the Draft EIR has been revised as follows:

Photograph 1. Southeast Southwest view of the project site from Arnold Drive.

Photograph 2. Property frontage looking west east from Arnold Drive.

This revision does not constitute the addition of substantial new information and would not require recirculation of the Draft EIR.

Response 13.3

The commenter states that the explanations given for consistency with the Contra Costa County Transportation Plan presented throughout the Draft EIR are extremely simplified. The commenter notes that the nearest shopping centers are at least a mile and a half away from the project site, contrasting the estimate of one mile stated in the Draft EIR. The commenter states that the distance from the project site to various shopping centers are too far for pedestrians and bicyclists.

As discussed under Impact TRA-1 and TRA-2 in Section 4.6, *Transportation*, of the Draft EIR, the project site is approximately 1 mile east of a commercial area. The project is also approximately 0.4 mile southwest of an access point to the Contra Costa Canal Trail. Bus Route 200 operated by Delta

Amare Apartment Homes Project

Transit will also be available for use by project residents. The project would also be served by Connection routes 18 and 316, which stop at the Pleasant Hill BART and Martinez Amtrak station. The project would incorporate transportation demand management strategies, as detailed under Threshold TRA-2. The Contra Costa Canal Trail, a 13.6-mile walking and cycling trail that extends from the southern boundary of the City Martinez, travels through the City of Pleasant Hill, and terminates in the City of Concord. The project would include the construction of a sidewalk on the southern side of Arnold Drive to improve pedestrian access to the project site.

In addition, Mitigation Measure TRA-1 would involve the creation of a Transportation Demand Management (TDM) plan that would include a variety of strategies for alternative modes of transportation. There alternative modes would be available to residents and may be utilized to connect to commercial areas or other places in the city. Strategies include, but are not limited to, providing car sharing, bike sharing, and ride sharing programs. With the provision of alternative modes of transportation, residents would not be limited to biking or walking, and would have adequate access to nearby commercial areas.

Response 13.4

The commenter notes that bus use in the project area is typically minimal, as routes are slow and inconsistent. The commenter states that making a daycare available at the project site will not reduce VMT as there are no school buses in the area and school-aged children will still need to be driven to the surrounding schools. The commenter lists the bus routes near the project site, as discussed in the Draft EIR, and states that each route is too infrequent to meet the needs of residents. The commenter urges the City to look deeper into the transportation issues this area faces, and suggests that the necessary infrastructure is not in place to fully accommodate the proposed project.

Please refer to Section 4.6, *Transportation*, for a full discussion on VMT and VMT reduction measures. The proposed apartment building would be expected to have similar VMT as other residential developments in the Traffic Analysis Zone (TAZ) in which it is located. The VMT generated as a result of the project could be reduced up to 10 percent with the implementation of a TDM program, which would be subject to City approval. The TDM program would need to achieve an 11 percent reduction to the average VMT per capita for the project's VMT impacts to be less than significant. Thus, Mitigation Measure TRA-1 would be implemented to decrease project generated VMT; however, a TDM program is unlikely to mitigate the project's impacts to less than significant.

As stated in Section 4.6, *Transportation*, of the DEIR, as part of the TDM program, a variety of strategies could be incorporated to both reduce project VMT and increase connectivity. Strategies could include, but are not limited to providing car sharing, bike sharing, and ridesharing programs, and encouraging carpooling and vanpooling.

In regard to daycare facilities, please refer to Section 6, *Alternatives*. The provision of a day care facility is part of Alternative 2: Mixed-Use Alternative and is not a part of the proposed project. As stated under Alternative 2 in the transportation section, Alternative 2 would slightly reduce impacts to VMT as children attending daycare would not have to travel off site; however, due to the modest reduction, impacts from Alternative 2 would remain significant and unavoidable, based on factors including the site's distance from services and high-quality transit, similar to the proposed project. Implementation of Mitigation Measure TRA-1 would reduce but would not eliminate this significant impact. Overall, transportation impacts under Alternative 2 would be similar to but slightly reduced compared to those of the proposed project.

Amare Apartment Homes Project

In regard to the commenters suggestion that the City address other potential transportation infrastructure issues, the comment has been noted and will be passed onto decision makers for their consideration.

Response 13.5

The commenter states an opinion that the number of exemptions requested for the proposed project suggests that the project is not practical. The commenter states that the height concession would conflict with the JMPSAP and that reducing the number of units could help reduce the VMT impact.

In regard to the height of the proposed project and consistency with the JMPSAP, please refer to Section 4.1, *Aesthetics*, of the Draft EIR. As discussed under Impact AES-1, the preserve south of SR 4 is identified as a Visually Significant Hilltop. A small section of the preserve is visible from the easternmost end of the project site; however, site topography and existing trees currently block most of the open space views throughout the project site. JMPSAP Policy 1.04 also recognizes the importance of long and short views of local hills; the project would be consistent with this policy, because the public views of the significant hilltop are long views, and the project would not block public views of the top of the hilltop.

Additionally, reducing the number of units in the project would not reduce the VMT impact, as VMT is calculated on a per capita basis. Therefore, reducing the number of units would not reduce the VMT per resident. Refer to Section 4.6, *Transportation*, of the Draft EIR for a further explanation of VMT calculation methodology.

As discussed under Impact AES-2, residential use of the project site would be consistent with its General Plan land use and City zoning designations. However, as stated in Chapter 2.5.1, *Density Bonus Request*, the project has requested a height concession pursuant to the State Density Bonus law, to allow a maximum height of 44 feet 2 inches above new grade, exceeding the City's height limit by over 8 feet. Under the Density Bonus Law, an inconsistency with development standards or zoning standards is not a specific, adverse impact to public health or safety. Pursuant to MMC Chapter 22.34, the project would require design review and approval from the Planning Commission.

Response 13.6

The commenter states that the parking waiver is inappropriate for the proposed project, as surrounding neighborhoods will be impacted by overflow parking. The commenter states that reducing drive aisle width is not appropriate as the current drive aisles were designed to allow for emergency service access, and reducing drive aisle width would create additional safety hazards. The commenter states that the project setback is too close to Highway 4 and the proposed project would be both visually disturbing and conflict with the JMPSAP.

As discussed under Impact TRA-1 in Table 4.6-1, the proposed project would provide 275 parking spaces, which exceeds the 223 spaces required by State density bonus law. Additionally, the project would be consistent with Policy II.B and Policy III.B of the City's General Plan Transportation Element, which require the project to provide off-street parking and discourage parking intrusion.

The applicant is requesting a drive aisle width reduction under the State Density Bonus law. The drive aisle width is a zoning standard and a reduction would not result in a public health or safety hazard because a 24-foot drive aisle width allows for two-way travel within the parking lot. Additionally, as discussed under Impact TRA-4, the Contra Costa County Fire Protection District

would review and approve the project to ensure that emergency access meets district standards. The Contra Costa County Fire Protection District's review would confirm that the project would not interfere with evacuation routes or impede evacuation plans. Furthermore, the project would be required to provide adequate emergency access pursuant to the 2019 California Building Code. The Contra Costa County Fire Protection District's review would ensure that the project would comply with City and County standards and requirements for emergency access.

Response 13.7

The commenter suggests that utilizing storypoles and a photomontage would offer the public a better visual of the proposed project and its impacts.

The comment has been noted and will be passed onto decisionmakers for their consideration.

Response 13.8

The commenter states that they expect the City to hold the developer accountable for all project mitigation measures mentioned in the Draft EIR, including the traffic signal at Arnold Drive and Pacheco Boulevard that has been previously requested by residents.

While the project applicant would be required to take certain actions to comply with the mitigation measures included throughout the Draft EIR, it is the City's responsibility to ensure that all mitigation measures are implemented pursuant to *CEQA Guidelines* Section 15097.

The comment has been noted and will be passed onto decisionmakers for their consideration.

Response 13.9

The commenter states an opinion that that the proposed project is not a good fit for the project site. The commenter suggests that a senior living facility is better suited in the project's place as it would reduce the number of vehicles, reduce traffic, have facility provided transportation and lessen the burden on local schools. The commenter suggests that the project be sited in a transit-oriented area, such as presented in Alternative 4 of the Draft EIR.

This comment is similar to Comment 5.1. Please refer to Response 5.1 for a response to this comment; as discussed therein, Alternative 4 would result in greater environmental impacts to some environmental resource areas than the proposed project. Furthermore, Alternative 4 may not be feasible as the applicant may not be able to purchase the alternative site.

The comment has been noted and will be passed onto decisionmakers for their consideration.

COMMENTER: Gavin McCreary, Project Manager, Department of Toxic Substances Control

DATE: August 29, 2022

Response 14.1

The commenter states that the Department of Toxic Substances Control's (DTSC's) responses will pertain to potential issues related to groundbreaking activities, work near a roadway, importation of backfill soil, and/or work on or in close proximity to an agricultural or former agricultural site.

This comment is noted and not related to the adequacy or conclusions of the EIR. No revisions to the EIR are required in response to this comment.

Response 14.2

The commenter notes that in the Initial Study, it is stated that a Phase I Environmental Site Assessment (ESA) was performed at the project location. The commenter states that the Initial Study does not indicate if the Phase I ESA was performed under the oversight of a qualified regulatory agency, such as the DTSC, RWQCB, or other qualified local agency that meets the requirements of Assembly Bill 304 (AB 304).

Assembly Bill 304 authorizes a responsible party, as defined, to request that a local officer supervise remedial action if a release of waste occurs and remedial action is required. The Phase I ESA is not a remedial investigation. Rather, it is utilized to assess the existing conditions of a project site. Thus, the Phase I ESA was not required to be completed under the oversight of a qualified regulatory investigation. The Phase I ESA concluded that no remedial action would be required. No revisions to the EIR are required.

Response 14.3

The commenter suggests that the Draft EIR acknowledge the potential for historic activities on or near the project site to result in the release of hazardous wastes/substances on the project site. The commenter states that the Draft EIR should also identify the mechanism(s) to initiate any required investigation and/or remediation and the government agency who will be responsible for providing appropriate regulatory oversight.

Please refer to Section 9, Hazards and Hazardous Materials, of the Initial Study for additional information on historic uses of the project site. As discussed therein, it was found that the project site was used for agricultural purposes until the 1970s. As stated in the Initial Study, the Phase I ESA found that historical uses of the adjoining properties are not of environmental concern, and during site reconnaissance, no items of potential environmental concern were identified at the project site. Therefore, there are no required investigations or remediation needed, and no revisions to the Draft EIR are warranted.

Response 14.4

The commenter states that tailpipe emissions from automobiles using leaded gasoline contain lead and result in aerially deposited lead (ADL) that may deposit along roadsides, medians, and can be found underneath some existing road surfaces. The commenter recommends collecting soil samples

for lead analysis prior to performing any intrusive activities for the project described in the Draft EIR.

A Phase I ESA was completed for the project site and is included as Appendix ESA to the Initial Study, which is Appendix IS to the Draft EIR. The Phase I ESA discusses the potential for the existence of a Historical Recognized Environmental Condition (HREC), but none were found. Additionally, ADL is typically a concern within 50 feet of a highway, and the project site is approximately 80 to 90 feet from Highway 4. The closest portion of the project site is near a straight, flat section of Highway 4, rather than an on-ramp, where accelerating vehicle speeds can increase the deposition of ADL. Furthermore, between the project site and Highway 4 is a hill. These facts, in addition to the Phase I ESA, show no substantial impact from ADL on or to the project site. No revisions to the EIR are required.

Response 14.5

The commenter states that proper sampling should be conducted to ensure all backfill soil is free of contamination.

According to DTSC, there are currently no established standards within applicable statues and regulations that address environmental requirements for imported fill material (DTSC 2017). Pursuant to Martinez Municipal Code Section 8.14.090, the City may require tests of materials to be used on site; however, this is not required and may be enforced at the City's discretion. Additionally, the property owner would be liable if contaminated soil were imported to the site.

No revisions to the EIR are required.

Response 14.6

The commenter states that if any part of the project site has been used for agricultural, weed abatement or related activities, proper investigation for organochlorinated pesticides should be discussed in the Draft EIR.

This comment is similar to Comment 14.5. Refer to Response 14.5 above.

Response 14.7

The commenter expresses gratitude for inclusion in the public comment period for the proposed project and links several resources such as the Site Mitigation and Restoration Program for additional suggestions.

The comment has been noted.

COMMENTER: Todd A. Williams, Director, Fennemore Wendel

DATE: August 29, 2022

Response 15.1

The commenter states that the Draft EIR correctly concludes that the two driveways along Arnold Drive would not cause hazards due to geometric design features. The commenter states that the Draft EIR notes that pedestrians will cross the street to access the north side of Arnold Drive or neighborhood on Starflower Drive. The commenter notes that the Draft EIR acknowledges that there are no traffic controls adjacent to the site, and expresses concern over unprotected pedestrian crossings.

Please refer to Section 4.6, Transportation, for detail on pedestrian facilities and traffic controls.

As stated in the Draft EIR, there is a sidewalk located on the north side of Arnold Drive. Residents of the proposed project may cross the street to utilize this sidewalk if they choose to walk to another location such as a school, surrounding neighborhoods, or other uses that the neighborhood offers. However, pedestrian crossing is expected to be minimal. For these reasons, Mitigation Measure TRA-2 has been included in the proposed project. Implementation of Mitigation Measure TRA-2 would involve narrowing the travel lanes on Arnold Drive, which would reduce motorist speeds and enhance pedestrian safety.

Response 15.2

The commenter notes that a potential mitigation measure suggested in the Draft EIR is additional on-street parking on the south side of Arnold Drive in front of the proposed project. The commenter states there is no basis for inclusion of this parking as a pedestrian safety measure. The commenter states an opinion that on-street parking would create conflicts with cyclists, other cars and pedestrian visibility from automobiles attempting to parallel park and open doors. The commenter states that since the proposed project meets the requirements set forth by the State Density Bonus Law, no additional parking can or should be required.

As discussed below in Section 2, *Amendments to the Draft EIR*, Mitigation Measure TRA-2 has been revised to eliminate the requirements for on-street parking. Instead, travel lanes on Arnold Drive would be narrowed by either adding a shoulder or adding a bike lane, as narrowing of lanes would reduce motorist speed and enhance pedestrian safety. Refer to Section 2, *Amendments to the Draft EIR*, for revisions to Mitigation Measure TRA-2.

Response 15.3

The commenter provides a list of measures that would address pedestrian safety concerns to a level of less than significant including but not limited to improved street lighting at the intersection of Starflower Drive and Arnold Drive, construction of a median for pedestrian refuge, installation of speed radar signs, and installation of an all-way stop sign at the intersection of Arnold Drive and Starflower Drive.

As noted in Section 2, Amendments to the Draft EIR, of this document, Mitigation Measure TRA-2 has been revised to require narrowing travel lanes on Arnold Drive to improve pedestrian safety,

which would reduce impacts to less than significant. Therefore, no additional mitigation would be required.

2 Amendments to the Draft EIR

This section presents the proposed text amendments to the Draft EIR. The amendments are the result of comments received during the public review period, and directly respond to those comments, or correction of typographical errors within the Draft EIR. These amendments serve as clarifications and amplifications on the content of the Draft EIR. None of the changes would warrant recirculation of the EIR pursuant to CEQA Guidelines Section 15088.5. The amendments serve to clarify and strengthen the content of the EIR, but do not introduce significant new information.

Changes in text are signified by strikeouts (strikeouts) where text is removed and by underlined font (underline font) where text is added. Other minor clarifications and corrections to typographical errors are also shown as corrected in this format, including corrections not based on responses to comments. Additionally, Appendix SAP and Appendix ESA to Appendix IS of the Draft EIR are appended to this document.

2.1 Draft EIR

Initial Study

Page 65:

The project site is located in the Martinez Unified School District Mount Diablo Unified School District. Based on a conservative metric of 19.6 percent of the population of Martinez under the age of 18, the project would generate approximately 86 children (U.S. Census Bureau 2019).

Executive Summary

ES-13:

Impact	Mitigation Measure(s)	Residual Impact
Impact TRA-3. The project would involve the construction of two driveways on Arnold Drive that would not substantially increase hazards due to design features or incompatible uses for vehicles. Implementation of mitigation measures would ensure that pedestrian crossings on Arnold Drive would not substantially increase hazards due to dangerous intersections. Impacts would be less than significant with mitigation incorporated.	Mitigation Measure (s) Mitigation Measure TRA-2 Pedestrian Safety In order to ensure safe pedestrian crossings safety at the project site, the applicant shall work with the City of Martinez to provide on street parking along the south side of Arnold Drive along the project boundary in a manner that would not obstruct views of pedestrians and would not	Residual Impact Less than Significant with Mitigation Incorporated
	introduce any hazards for bicyclists. other means to narrow the travel lanes on Arnold Drive. Final plans for on-street parking shoulders or bike lanes shall be approved by the City prior to the issuance of an occupancy permit. The narrowing on lanes has been proven to presence of on-street parking can help reduce motorist speeds, which would enhance pedestrian safety. The applicant shall work with the City and pay a fair-share fee, as determined by the City, to implement	
	on-street parking and other potential measures to improve safety for pedestrian crossings. Such measures could include but are not limited to the following: the provision of minimum 5' wide shoulders on both the project frontage and on the north side of the street across from the project frontage by removing and restriping the travel lanes. These shoulders could be signed as bike lanes in the future as the	

remainder of the street is restriped to provide continuity with the existing bike lanes to the west.

Initial Study

As Lead Agency, the City of Martinez (City) has prepared this Initial Study for the Amáre Apartment Homes project in compliance with the California Environmental Quality Act (CEQA), the CEQA guidelines (California Code of Regulations Section 15000 et. seq.), and the regulations and policies of the City.

1. Project Title

Amáre Apartment Homes Project

Lead Agency Name and Address

City of Martinez Planning Division 525 Henrietta Street Martinez, California 94553

3. Contact Person and Phone Number

Hector J. Rojas, AICP Planning Manager (925) 372-3524

Project Sponsor's Name and Address

William Schrader The Austin Group LLC 164 Oak Road, Alamo, California 94507

5. Project Location

The project site is located in Martinez in Contra Costa County (Figure 1). The site is approximately 6.06 acres in size and is on the south side of Arnold Drive, near its intersection with Starflower Drive (Figure 2). The site includes two assessor parcel numbers: 161-400-009 and 161-400-010.

6. General Plan Designation

The General Plan land use designation of the project site is Mixed Residential (up to 29 units/acre)/Office (MR/O).

Figure 1 Regional Project Location

Imagery provided by Esri and its licensors © 2020.

Figure 2 Project Vicinity Map

7. Zoning

The project site is in a Mixed Use District: Multi-Family Residential/Professional and Administrative Offices (M-R-1.5/PA).

8. Surrounding Land Uses and Setting

The project site is surrounded by a mix of land uses. It is bordered by undeveloped land and State Route (SR) 4 to the south, Arnold Drive to the north, the Contra Costa County Assessor's Office to the east, and a single-family residence to the west. Single-family neighborhoods are located north of Arnold Drive and to the west of the site. Mountain View Sanitary District operates and maintains a sanitary sewer lift station on a small parcel that fronts Arnold Drive and is surrounded by the project site on the other three sides. The parcel containing the pump station is not included in the project site, and the proposed project would not involve changes to the existing pump station facility.

The site grades down slope from west to east, with an approximately 20-foot hill on the southwest corner of the site. The project site is undeveloped and contains non-native annual grassland and 60 trees, primarily native oaks and Italian stone pines, with redwoods and African sumac trees occurring along Arnold Drive (Traverso Tree Service 2016, Appendix ARB). A 48-inch storm drain traverses the site alongside a straight, man-made ditch that runs southeast from a point just off Arnold Drive for approximately 600 feet through the project site.

9. Project Description

The proposed project would involve the construction of six buildings that would include 104 one bedroom/one bathroom residential units and 79 two bedroom/two bathroom units, for a total of 183 rental residential units. Nine of the units would be below market rate, qualifying it as a California Density Bonus Project. Figure 3 shows the proposed site plan. The proposed apartment complex would also include on-site amenities such as a workout facility, business center, children's play area, outdoor kitchen area, and parking areas. Three of the buildings, Buildings 1, 2, and 4, would be three stories and up to 35 feet, 2 inches above adjacent grade. The other three buildings, Buildings 3, 5, and 6, would be four stories and up to 44 feet, 2 inches above adjacent grade.

Landscaping

Landscaping would include approximately 178 new trees and 28 standards, as well as shrubs and ground cover throughout the project site. High planting densities would be used along the southern and eastern boundaries of the project site to create a visual screen between the site and SR 4 and adjacent uses. Landscaping would be irrigated using a fully automatic, water-conserving irrigation system consisting of drip and bubbler fixtures; a weather-based controller would regulate the system and include a rain sensor control to minimize watering during and after rain events. Three bioretention areas would be located on site: one in the southeastern corner and two along Arnold Drive on either side of the existing pump station. Flow-through planters would also be located along the parking area in the center of the site and north of the three western structures.

¹ Standards refer to the secondary street trees known as crape myrtle (lagerstroemia "tuscarosa") in the applicant-provided landscape plans.

Figure 3 Proposed Project Site Plan

Site Access and Parking

Access to the project site would be provided through two proposed driveways from Arnold Drive (see Figure 3). The main project driveway would align with the existing intersection of Arnold Drive and Starflower Drive and would allow for left and right turn movements into and out of the project site from Arnold Drive. The second project driveway would be located near the eastern boundary of the project site and would provide right turn access onto and from Arnold Drive. Interior drive aisles would connect all six of the proposed buildings to both driveways on the project site. Parking areas would be provided in surface parking stalls and garages underneath the proposed residences.

The project would provide 275 parking spaces, of which 87 would be covered and 188 would be uncovered. Pursuant to state density standards, the project exceeds the required 223 parking spaces. The project includes a request for a parking requirement reduction to reduce the number of parking spaces required under City of Martinez Municipal Code (MMC) Chapter 22.36.030, from 458 spaces to 275 required spaces.² Parking locations are shown on Figure 3.

Utility Infrastructure

One connection would be made to existing water infrastructure within Arnold Drive for domestic water use. The connection would consist of an 8-inch line that would split into multiple 4-inch water lines to serve the proposed apartment structures. Two additional connections would be made for fire water supply through the project site. Wastewater service would be provided by 8-inch sanitary sewer lines connecting to the proposed apartment structures. The 8-inch sewer lines would transport wastewater to the existing sewer pump station located adjacent to Arnold Drive.

Public storm drainage infrastructure currently exists in the eastern and northern portions of the project site, and a drainage swale exists on the northeastern portion of the project site. The public storm drain systems would be replaced and rerouted to run within the drive aisles of the project site. Proposed public storm drain infrastructure would include multiple sizes of piping, ranging from 60-inches to 24-inches. The existing drainage swale on the project site would be piped, and extensive stormwater infrastructure, such as bioretention areas and storm water planters, would be incorporated throughout the project site prior to connection with proposed stormwater infrastructure.

Site Preparation and Construction

Construction would take approximately 24 months. Grading would occur over approximately four months, and the project would require import of 12,673 cubic yards of soil. Of the on-site trees, 43 would be removed and 17 would be retained.

10. Required City Approvals

- Density Bonus
- Design Review Permit for the design of the apartments
- Height Concession to allow a maximum height of 44 feet, 2 inches for proposed Buildings 3, 5, and 6
- Hillside Density Waiver

² Calculated using MMC Section 22.36.030 Residential Uses Table. (183 units x 1 covered space) + (183 units x 1.25 open space) + (183 units x 0.25 guest parking space) = 458 spaces (rounded up).

- Building Separation Waiver
- Parking Waiver for relief from the required dimension of exterior pad parking spaces and driveway width
- Rear Building Setback Waiver
- Drive Aisle Width Waiver
- Height Exception for each of the four-story buildings
- Parking Lot Landscaping Waiver
- 11. Other Public Agencies Whose Approval is Required
- 12. Have California Native American Tribes Traditionally and Culturally Affiliated with the Project Area Requested Consultation Pursuant to Public Resources Code Section 21080.3.1?

The Ione Band of Miwok Indians previously submitted a request to the City to be consulted during the review process for proposed projects under the City's jurisdiction, pursuant to Public Resources Code Section 21080.3.1. As such, the City provided the Ione Band of Miwok Indians with notification regarding the proposed project on April 11, 2016. The Ione Band of Miwok Indians did not respond to the City's request for consultation for the proposed project.

Environmental Factors Potentially Affected

This project would potentially affect the environmental factors checked below, involving at least one impact that is "Potentially Significant" or "Less than Significant with Mitigation Incorporated" as indicated by the checklist on the following pages.

Aesthetics		Agriculture and Forestry Resources		Air Quality
Biological Resources		Cultural Resources		Energy
Geology and Soils		Greenhouse Gas Emissions		Hazards and Hazardous Materials
Hydrology and Water Quality		Land Use and Planning		Mineral Resources
Noise		Population and Housing		Public Services
Recreation	•	Transportation	•	Tribal Cultural Resources
Utilities and Service Systems		Wildfire		Mandatory Findings of Significance

Determination

Based on this initial evaluation:

- □ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
- ☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions to the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
- I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
- I find that the proposed project MAY have a "potentially significant impact" or "less than significant with mitigation incorporated" impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

City of Martinez Amáre Apartment Homes Project	
□ I find that although the proposed project could have environment, because all potential significant effectin an earlier Environmental Impact Report (EIR) or Napplicable standards, and (b) have been avoided or or NEGATIVE DECLARATION, including revisions or rupon the proposed project, nothing further is requi	ts (a) have been analyzed adequately NEGATIVE DECLARATION pursuant to mitigated pursuant to that earlier EIR mitigation measures that are imposed

a.	Have a substantial adverse effect on a scenic vista?	-			
b.	Substantially damage scenic resources, including but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?				
c.	In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	-			
d.	Create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area?	•			

- a. Would the project have a substantial adverse effect on a scenic vista?
- b. Would the project substantially damage scenic resources, including but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?
- c. Would the project, in non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?
- d. Would the project create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area?

The project site is in an urbanized (suburban) area comprising residential development with some mixed office/commercial uses and low to moderate levels of existing lighting. Currently, site topography and existing on-site trees block the view of offsite open space from Arnold Drive; limited views of the open space preserve's northern border can be seen from Arnold Drive along the

City of Martinez

Amáre Apartment Homes Project

eastern portion of the project site. However, the project would result in changes to the existing setting and may be potentially significant. This issue will be studied in the EIR.

POTENTIALLY SIGNIFICANT IMPACT

Agriculture and Forestry Resources Less than Significant **Potentially** with Less than Significant Mitigation Significant **Impact** Incorporated **Impact** No Impact Would the project: a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use? П П b. Conflict with existing zoning for agricultural use or a Williamson Act contract? c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)); timberland (as defined by Public Resources Code Section 4526); or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))? П d. Result in the loss of forest land or conversion of forest land to non-forest use? e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use? П

- a. Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?
- e. Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?

The project site is designated as Urban and Built-Up Land on the Contra Costa County Important Farmland 2014 Map (California Department of Conservation [DOC] 2016). The project site is designated and zoned for mixed-use residential and office uses. Surrounding properties are developed and are also not used or zoned for agriculture. As such, the proposed project would not

convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to a non-agricultural use and there would be no impact. This impact will not be discussed in the EIR.

NO IMPACT

b. Would the project conflict with existing zoning for agricultural use or a Williamson Act contract?

The project site and surrounding area are not subject to Williamson Act contract (DOC 2013), nor is the site zoned for agricultural use. The current zoning designation for the project site is M-R-1.5/PA (City of Martinez 2018). Therefore, no Williamson Act contracts would be affected by project implementation and no impact would occur. This impact will not be discussed in the EIR.

NO IMPACT

- c. Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)); timberland (as defined by Public Resources Code Section 4526); or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?
- d. Would the project result in the loss of forest land or conversion of forest land to non-forest use?

While trees are present on the project site, the site itself is not considered forest land (as defined in Public Resources Code section 12220[g]), timberland (as defined by Public Resources Code section 4526), and is not zoned Timberland Production (as defined by Government Code section 51104[g]). The project site is not currently utilized for the provision of forest and timber resources. As such, the project would not convert forest or timberland uses, and no impact would occur. This impact will not be discussed in the EIR.

NO IMPACT

3	Air Quality				
		Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
W	ould the project:				
a.	Conflict with or obstruct implementation of the applicable air quality plan?			-	
b.	Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?			-	
c.	Expose sensitive receptors to substantial pollutant concentrations?			•	
d.	Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?			•	

Air Quality Standards and Attainment

Martinez is in Contra Costa County, which is a subregion of the San Francisco Bay Area Air Basin (SFBAAB), which is under the jurisdiction of the Bay Area Air Quality Management District (BAAQMD). The SFBAAB includes the counties of San Francisco, Santa Clara, San Mateo, Marin, Napa, Contra Costa, and Alameda, along with the southeast portion of Sonoma County and the southwest portion of Solano County.

As the local air quality management agency, the BAAQMD is required to monitor air pollutant levels to ensure that state and federal air quality standards are met and, if they are not met, to develop strategies to meet them. Depending on whether or not standards are met or exceeded, a local air basin is classified as in "attainment" or "non-attainment." The BAAQMD is in non-attainment for the national standards for ozone (O_3) and particulate matter smaller than 2.5 microns in diameter $(PM_{2.5})$ and in non-attainment for the state standard for O_3 , $PM_{2.5}$, and particulate matter smaller than 10 microns in diameter (PM_{10}) $(BAAQMD\ 2017a)$.

Air Quality Management

The BAAQMD is primarily responsible for assuring that national and state ambient air quality standards are attained and maintained in the Bay Area. The BAAQMD is also responsible for adopting and enforcing rules and regulations concerning air pollutant sources, issuing permits for stationary sources of air pollutants, inspecting stationary sources of air pollutants, responding to citizen complaints, monitoring ambient air quality and meteorological conditions, awarding grants to reduce motor vehicle emissions, conducting public education campaigns, as well as many other activities. The BAAQMD has jurisdiction over much of the nine-county Bay Area, including Contra Costa County.

The BAAQMD adopted the 2017 Clean Air Plan (2017 Plan) as an update to the 2010 Clean Air Plan. The 2017 Plan provides a regional strategy to protect public health and the climate. Consistent with the greenhouse gas (GHG) reduction targets adopted by the state, the 2017 Plan lays the groundwork for a long-term effort to reduce Bay Area GHG emissions to 40 percent below 1990 levels by 2030 and 80 percent below 1990 levels by 2050. To fulfill state O₃ planning requirements, the 2017 control strategy includes all feasible measures to reduce emissions of O₃precursors—reactive organic gases (ROG) and nitrogen oxides (NO_x)—and reduce transport of ozone and its precursors to neighboring air basins. The 2017 Plan builds upon and enhances the BAAQMD's efforts to reduce emissions of fine particulate matter and toxic air contaminants (BAAQMD 2017b).

BAAQMD Screening Criteria

The BAAQMD recommends that lead agencies determine appropriate air quality emissions thresholds of significance based on substantial evidence in the record. The BAAQMD's significance thresholds in the updated May 2017 CEQA Air Quality Guidelines for project operations within the SFBAAB are the most appropriate thresholds for use in determining air quality impacts of the proposed project. The BAAQMD developed screening criteria to provide lead agencies and project applicants with a conservative indication of whether a project could result in potentially significant air quality impacts. If a project meets all of the screening criteria, then the lead agency or applicant would not need to perform a detailed air quality assessment of their project's air pollutant emissions. These screening levels are generally representative of new development on greenfield sites without any form of mitigation measures taken into consideration (BAAQMD 2017c).

The screening criteria for operational criteria pollutant emissions of residential townhome developments (which is the category most applicable for the proposed project) is 451 dwelling units. For construction-related emissions, the screening criteria is 240 dwelling units. As provided by the BAAQMD's CEQA Air Quality Guidelines, if a project meets the screening criteria for an impact category and is consistent with the methodology used to develop the screening criteria, then its air quality impact for that category may be considered less than significant.

For a project to meet the screening criteria for construction, it cannot include any of the following activities during construction:

- Demolition
- Simultaneous occurrence of more than two construction phases (e.g., paving and building construction occurring simultaneously)
- Simultaneous construction of more than one land use type (e.g., project would develop residential and commercial uses on the same site) (not applicable to high density infill development)
- Extensive site preparation (i.e., greater than default assumptions used by the Urban Land Use Emissions Model for grading, cut/fill, or earth movement)
- Extensive material transport (e.g., greater than 10,000 cubic yards of soil import/export)
 requiring a considerable amount of haul truck activity

As the applicant provided information stating construction phases may overlap and the project would involve over 10,000 cubic yard of material transport, the screening criteria for construction do not apply to the project.

BAAQMD also provides a preliminary screening methodology to conservatively determine whether a proposed project would exceed CO thresholds. If the following criteria are met, a project would result in a less than significant impact related to local CO concentrations:

- Project is consistent with an applicable congestion management program established by the county congestion management agency for designated roads or highways, regional transportation plan, and local congestion management agency plans.
- The project traffic would not increase traffic volumes at affected intersections to more than 44,000 vehicles per hour.
- The project traffic would not increase traffic volumes at affected intersections to more than 24,000 vehicles per hour where vertical and/or horizontal mixing is substantially limited (e.g., tunnel, parking garage, bridge underpass, natural or urban street canyon, below-grade roadway).

BAAQMD Air Emission Thresholds

Table 1 presents the significance thresholds for construction/demolition and operational-related criteria air pollutant and precursor emissions used for the purposes of this analysis. These represent the levels at which a project's individual emissions of criteria air pollutants or precursors would result in a cumulatively considerable contribution to the SFBAAB's existing air quality conditions. For the purposes of this analysis, the proposed project would result in a significant impact if construction or operational emissions would exceed any of the thresholds shown in Table 1.

Table 1 Air Quality Thresholds of Significance

Pollutant/ Precursor	Construction: Average Daily Emissions (lbs/day)	Operation: Maximum Annual Emissions (tpy)	Operation: Average Daily Emissions (lbs/day)
ROG	54	10	54
NO_X	54	10	54
PM ₁₀	82 (exhaust)	15	82
PM _{2.5}	54 (exhaust)	10	54

Notes: lbs/day = pounds per day; tpy = tons per year; ROG = reactive organic gases; NO_X = oxides of nitrogen; PM_{10} = respirable particulate matter with an aerodynamic resistance diameter of 10 micrometers or less.; $PM_{2.5}$ = fine particulate matter with an aerodynamic resistance diameter of 2.5 micrometers or less

Source: BAAQMD 2017c: Table 2-1.

a. Would the project conflict with or obstruct implementation of the applicable air quality plan?

The California Clean Air Act requires that air districts create a Clean Air Plan that describes how the jurisdiction will meet air quality standards. The most recently adopted applicable air quality plan is the BAAQMD's 2017 Plan. As described in the *Air Quality Management* Section above, the 2017 Plan updates the most recent Bay Area O₃ plan, the 2010 Clean Air Plan, pursuant to air quality planning requirements defined in the California Health and Safety Code. To fulfill state O₃ planning requirements, the 2017 control strategy includes all feasible measures to reduce emissions of O₃ precursors—ROG and NO_x—and reduce transport of O₃ and its precursors to neighboring air basins.

The 2017 Plan builds upon and enhances the BAAQMD's efforts to reduce emissions of fine particulate matter and Toxic Air Contaminants (TAC). The 2017 Plan does not include control

measures that apply directly to individual development projects. Instead, the control strategy includes control measures related to stationary sources, transportation, energy, buildings, agriculture, natural and working lands, waste management, water, and super-GHG pollutants.

The 2017 Plan focuses on two paramount goals:

- Protect air quality and health at the regional and local scale by attaining all national and state air quality standards and eliminating disparities among Bay Area communities in cancer health risk from TACs
- Protect the climate by reducing Bay Area GHG emissions to 40 percent below 1990 levels by 2030, and 80 percent below 1990 levels by 2050

Under BAAQMD's methodology, a determination of consistency with the 2017 Plan should demonstrate that a project:

- Supports the primary goals of the air quality plan
- Includes applicable control measures from the air quality plan
- Does not disrupt or hinder implementation of any air quality plan control measures

A project that would not support the 2017 CAP goals would not be considered consistent with the 2017 CAP. Individual project consistency with BAAQMD quantitative thresholds is interpreted as demonstrating support for the clean air plan's goals. As shown in the response to checklist items b and c (see below), the proposed Plan would not result in exceedances of BAAQMD 2017 thresholds for criteria air pollutants and thus would not conflict with the 2017 CAP's goal to attain air quality standards. Table 2 provides the applicable control strategies to the project.

Table 2 2017 Plan Applicable Strategies

Control Strategy	Evaluation
Direct new development to areas that are well served by transit, and conducive to bicycling and walking.	The project area is along Route 18/23/99x of the Central Contra Costa Transit Authority transient lines. Dedicated bike lanes and trails are located along Arnold Drive.
Expand the production of low-carbon, renewable energy by promoting on-site technologies such as rooftop solar, wind and ground-source heat pumps.	The project will include solar electrical generation systems to comply with net zero energy requirements under the Energy Code.
Promote energy and water efficiency in both new and existing buildings.	The project will include water efficient fixtures to comply with CalGreen requirements.
Promote the switch from natural gas to electricity for space and water heating in Bay Area buildings.	The project will include solar electrical generation systems to comply with net zero energy requirements under the Energy Code.

Therefore, consistent with the City's CEQA thresholds, the proposed Plan would not conflict with or obstruct the implementation of the 2017 Clean Air Plan. This impact would be less than significant and will not be discussed in the EIR.

LESS THAN SIGNIFICANT IMPACT

b. Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Construction

Project construction would result in temporary construction emissions and long-term operational emissions. Construction activities such as the operation of construction vehicles and equipment over unpaved areas, grading, trenching, and disturbance of stockpiled soils have the potential to generate fugitive dust (PM_{10}) through the exposure of soil to wind erosion and dust entrainment. Exhaust emissions associated with heavy-duty construction equipment would potentially degrade regional air quality. Project construction would require more than 10,000 cubic yards of soil import, and construction phases would overlap; therefore, project construction exceeds the BAAQMD screening criteria.

Construction emissions were estimated using the California Emissions Estimator Model (CalEEMod) version 2016.3.2 and are shown in Table 3.

Table 3 Construction Emissions (pounds/day)

		,,	
Pollutant	Maximum Daily Emissions ¹	Significance Threshold	Significant Impact?
ROG	14.9	54	No
NO _x	46.5	54	No
СО	29.8	N/A	N/A
PM ₁₀ (exhaust)	1.8	82	No
PM _{2.5} (exhaust)	1.7	54	No

¹ The BAAQMD threshold is for the average daily emissions, but the maximum daily emissions are provided here for a conservative analysis.

Source: Appendix AQ, CalEEMod worksheet Table 2.1 "Overall construction (Maximum Daily Emission)" emissions

As shown in Table 3, the proposed project would not exceed the BAAQMD short-term construction thresholds and impacts from construction emissions would therefore be less than significant.

Operation

Long-term emissions associated with operational impacts would include emissions from vehicle trips (mobile sources), natural gas and electricity use (energy sources), and landscape maintenance equipment, consumer products, and architectural coating associated with on-site development (area sources). Table 4 and Table 5 show that emissions would not exceed BAAQMD daily or annual thresholds for any criteria pollutant. Consequently, operational impacts would be less than significant. This impact will not be discussed in the EIR.

Table 4 Project Operation Average Daily Emissions

	Average Daily Emissions (lbs/day)

N/A = not applicable; no BAAQMD threshold for CO or SO_X

LESS THAN SIGNIFICANT IMPACT

c. Would the project expose sensitive receptors to substantial pollutant concentrations?

CO Hot Spots

A project's indirect CO emissions would be significant if they contribute to a violation of the State standards for CO (9.0 ppm averaged over eight hours and 20 ppm over one hour). BAAQMD provides a preliminary screening methodology to conservatively determine whether a proposed project would exceed CO thresholds. If the following criteria are met, a project would not have a significant impact related to local CO concentrations:

- Project is consistent with an applicable congestion management program established by the county congestion management agency for designated roads or highways, regional transportation plan, and local congestion management agency plans.
- 2. The project traffic would not increase traffic volumes at affected intersections to more than 44,000 vehicles per hour.
- 3. The project traffic would not increase traffic volumes at affected intersections to more than 24,000 vehicles per hour where vertical and/or horizontal mixing is substantially limited (e.g.,

tunnel, parking garage, bridge underpass, natural or urban street canyon, below-grade roadway).

The project must comply with the Contra Costa Transportation Authority's Congestion Management Program. The project is anticipated to result in an increase of 102 hourly trips to the p.m. peak hour traffic volumes. The busiest affected intersection would be Pacheco Boulevard and Arnold Drive, which has a volume of 18,000 vehicles per day. The project trip generation added to existing traffic volumes would not exceed 44,000 vehicles per day or 24,000 vehicles per hour. Therefore, the project would have a less than significant impact on local CO concentrations.

As construction and operational emissions would not exceed BAAQMD thresholds for any criteria pollutant and would comply with BAAQMD criteria pollutant thresholds, and CAAQS CO thresholds, the project would not result in individually or cumulatively significant impacts to air quality.

Toxics

The California Air Resources Board (CARB) has identified diesel particulate matter as the primary airborne carcinogen in the state (CARB 2014). TACs include a defined set of air pollutants that may pose a present or potential hazard to human health. Common sources of TACs and PM_{2.5} include gasoline stations, dry cleaners, diesel backup generators, truck distribution centers, freeways, and other major roadways (BAAQMD 2017c). The project does not propose construction of gas stations, dry cleaners, highways, roadways, or other sources that could be considered permitted or non-permitted source of toxic air contaminants or PM_{2.5} in proximity to receptors. The project would not introduce a new stationary source of emissions and would not result in particulate matter greater than BAAQMD thresholds. Moreover, as described above under criterion (b), the proposed project would not exceed emissions thresholds during construction or operation. Impacts would be less than significant. This impact will not be discussed in the EIR.

LESS THAN SIGNIFICANT IMPACT

d. Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Table 3-3 in the BAAQMD's 2017 CEQA Guidelines provides odor screening distances for land uses that have the potential to generate substantial odor complaints. These uses include wastewater treatment plants, landfills or transfer stations, refineries, composting facilities, confined animal facilities, food manufacturing, smelting plants, and chemical plants (BAAQMD 2017c). None of these identified uses would occur on or in the vicinity of the project site. The proposed project, including outdoor kitchen, does not include odor-complaint generating uses as identified by the BAAQMD CEQA Guidelines, and would not generate objectionable odors affecting a substantial number of people during operation.

During construction activities, heavy equipment and vehicles would emit odors associated with vehicle and engine exhaust both during normal use and when idling. However, such emissions would be intermittent in nature and would dissipate rapidly with increasing distance from the source. Therefore, the proposed project would not generate objectionable odors affecting a substantial number of people. This impact would be less than significant and will not be discussed in the EIR.

LESS THAN SIGNIFICANT IMPACT

4	Biological Resourc	ces			
		Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Wc	ould the project:				
a.	Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	•			
b.	Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	•			
c.	Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?				
d.	Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	•			
e.	Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?				
f.	Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?				•

- a. Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?
- b. Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?
- c. Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?
- d. Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?
- e. Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

The project site is currently undeveloped and contains grasslands and native and non-native trees on the hillsides with the potential to support sensitive species. The project site also has a low-lying drainage ditch that appears to contain potential wetland conditions. Therefore, impacts related to special-status species, riparian habitats and natural communities, wetlands, wildlife movement, and conflicts with local policies or ordinances protecting biological resources would be potentially significant impact and will be addressed in the EIR.

POTENTIALLY SIGNIFICANT IMPACT

f. Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

The boundary of the East Contra Costa County Habitat Conservation Plan/Natural Community Conservation Plan is approximately 15 miles east of Martinez. As the city is not located within the boundaries of this or any other habitat conservation plan/natural community conservation plan, the proposed project would not conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or State habitat conservation plan and there would be no impacts. This impact will not be discussed further in the EIR.

NO IMPACT

5	Cultural Resource	es					
		Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact		
Wo	Would the project:						
a.	Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?						
b.	Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?						
c.	Disturb any human remains, including those interred outside of formal cemeteries?	•					

- a. Would the project cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?
- b. Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?
- c. Would the project disturb any human remains, including those interred outside of formal cemeteries?

The project site does not contain structures or other built environment features that may be considered historical resources. Considering the previous uses and frequent disturbance of the project site, archaeological resources are unlikely to occur there, but the potential remains for unanticipated discoveries during ground disturbance, which could cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines Section 15064.5. This impact would be potentially significant and will be evaluated in the EIR.

POTENTIALLY SIGNIFICANT IMPACT

6	Energy				
		Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
W	ould the project:				
a.	Result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?			•	
b.	Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?				•

a. Would the project result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

The total consumption of energy during project construction and operation of the buildings was estimated using the assumptions and factors from CalEEMod Version 2016.3.2, the results of which can be found in Appendix AQ.

Construction

Project construction would result in short-term consumption of energy from the use of construction equipment and processes. Energy use would be primarily from fuel consumption to operate heavyduty equipment, light-duty vehicles, machinery, and generators. Temporary grid power may also be provided to construction trailers or electric construction equipment. Project construction would be required to comply with the MMC, which incorporates the California Green Building Standards Code (CalGreen). The California Green Building Standards Code includes specific requirements related to recycling, construction materials, and energy efficiency standards that apply to construction of residences to minimize wasteful, inefficient, and unnecessary energy consumption. Therefore, project construction would not involve wasteful, inefficient, or unnecessary consumption of energy resources.

Operation

The proposed project would involve the use of energy during operation. The project would require permanent grid connections for electricity and natural gas. The project would be required to comply with the California Building Code (Title 24) and the MMC. CalGreen (adopted under MMC 15.07.010), includes specific requirements related to energy efficiency standards that apply to new residences and that minimize wasteful, inefficient, and unnecessary energy consumption during operation. CalGreen also requires water-efficient plumbing fixtures and fittings, recycling services, and other energy-efficient measures. Under the California Energy Code, the project must meet the

net zero energy requirements for new single- and multiple-family residential development, up to three stories, by incorporating solar electric generation systems into the design.

The proposed project would also involve the use of energy from private vehicle travel to and from the site. According to CARB, the average miles per gallon for all gasoline vehicles in operational year 2021 is 14.7 miles per gallon (CARB 2019). Assuming a trip length of 10.8 miles project operation would require 357,193 gallons of gasoline per year (California Air Pollution Control Officers Association 2017). This estimate conservatively assumes that a variety of vehicle types would travel to and from the project site, whereas for a residential development, most, if not all, vehicle trips would be conducted in passenger vehicles, which generally operate at a higher fuel efficiency than 14.7 miles per gallon. Therefore, the project would not result in wasteful, inefficient, or unnecessary consumption of energy resources from travel to and from the site.

Based on information from CalEEMod, project operation would require permanent grid connections for electricity and natural gas. Approximately 2,522 million British thermal units per year (MMBtu/year) of electricity would be used for lighting and large appliances within the residential units. Approximately 1,533 MMBtu/year of natural gas would be used primarily for heating the proposed structures. The proposed residential structures would total approximately 188,895 square feet, which is an average energy use intensity (EUI) of 0.021472 MMBtu per square foot. According to the U.S. Energy Information Administration (EIA), average EUI for residences in the Pacific region of the United States is 0.0314 MMBtu per square foot (EIA 2018a; EIA 2018b). Therefore, the project's EUI for residential buildings would be below the average EUI in the Pacific region of the U.S. Project operation would not result in significant impacts due to the wasteful, inefficient, or unnecessary consumption of energy.

Overall, project operation would result in consumption of fuels from vehicle trips, and electricity and natural gas in proposed structures. Project energy consumed would represent an incremental increase in energy usage compared to existing conditions, and the proposed project would implement energy-efficient components to reduce energy demand. Therefore, impacts would be less than significant.

Conclusion

Project construction and operation would not result in potentially significant environmental effects due to wasteful, inefficient, or unnecessary consumption of energy. Impacts would be less than significant. This impact will not be discussed in the EIR.

LESS THAN SIGNIFICANT IMPACT

b. Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Energy use during project construction would be primarily in the form of fuel consumption to operate heavy equipment, light-duty vehicles, machinery, and generators. Temporary grid power may also be provided to construction trailers or electric construction equipment. Energy use during construction would be temporary and construction equipment used would be typical of other construction projects in the region. Therefore, project construction would not result in a potential impact due to wasteful, inefficient, or unnecessary consumption of energy resources, and no construction-related energy impact would occur.

Table 6 provides energy efficiency goals and policies provided in the City's Climate Action Plan (CAP); it describes the project's consistency with these policies (City of Martinez 2009).

Table 6 Project Compliance with Energy Efficiency Goals and Policies

Energy Efficiency Goal or Policy	Project Consistency
City of Martinez Climate Action Plan	
Goal 1: To shift to renewable energy sources	Consistent. The project includes a solar system and would be required to comply with the 2019 California Building Code (Title 24), which includes updates to the energy code, which requires all new single or multiple family residential construction up to three stories high to be Net zero energy emissions. Title 24 also includes CALGreen's specific requirements related to water-efficient plumbing fixtures and fittings, recycling services, and other energy-efficient measures, representing a shift toward conservation and a decreased reliance on non-renewable energy sources.
Principal 6. Reduce, reuse, and recycle.	Consistent. The project would be required to comply with the 2019 California Building Code (Title 24) and includes CALGreen requirement to divert at least 65 percent of waste from covered construction projects. Project occupants would be required to comply with waste diversion requirements under Assembly Bill (AB) 341, which requires 75 percent diversion of waste from landfills.

As shown in Table 6, the project would be consistent with applicable energy efficiency goals and policies. Therefore, potential impacts associated with renewable energy and energy efficiency would be less than significant. This impact will not be discussed in the EIR.

f.	pale	ectly or indirectly destroy a unique contological resource or site or unique logic feature?				

A Preliminary Geotechnical Investigation for the project site was completed by Cornerstone Earth Group in December of 2009 (Appendix GEO). The investigation consisted of field and laboratory programs to evaluate physical and engineering properties of the subsurface soils, engineering analysis to prepare recommendations for site work and grading, building foundations, flatwork, retaining walls, and pavements, and preparation of this report. In 2016, the City hired Cal Engineering & Geology to conduct a peer review of the Preliminary Geotechnical Investigation to provide technical advice to assist the City in its discretionary permit decisions. The analysis contained in this section is based, in part, on the Preliminary Geotechnical Investigation prepared for the proposed project by Cornerstone Earth Group as well as the Peer Review prepared by Cal Engineering & Geology (Cornerstone Earth Group 2009, Cal Engineering & Geology 2016; included in Appendix GEO).

- a.1. Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?
- a.2. Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving strong seismic ground shaking?
- a.3. Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving seismic-related ground failure, including liquefaction?
- a.4. Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving landslides?
- b. Would the project result in substantial soil erosion or the loss of topsoil?
- c. Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?
- d. Would the project be located on expansive soil, as defined in Table 1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?
- e. Would the project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?
- f. Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

A Preliminary Geotechnical Investigation for the project site was completed by Cornerstone Earth Group in December of 2009 (Appendix GEO). The investigation consisted of field and laboratory programs to evaluate physical and engineering properties of the subsurface soils, engineering analysis to prepare recommendations for site work and grading, building foundations, flatwork, retaining walls, and pavements, and preparation of this report. In 2016, the City hired Cal Engineering & Geology to conduct a peer review of the Preliminary Geotechnical Investigation to provide technical advice to assist the City in its discretionary permit decisions. The analysis contained in this section is based, in part, on the Preliminary Geotechnical Investigation prepared for the proposed project by Cornerstone Earth Group as well as the Peer Review prepared by Cal

Engineering & Geology (Cornerstone Earth Group 2009, Cal Engineering & Geology 2016; included in Appendix GEO).

Based on the results in this report, there would be a potentially significant impact with regard to unstable soil that may be prone to lateral spreading, expansive soil, and soil erosion. This impact will be evaluated in the EIR.

8	B Greenhouse Gas Emissions				
		Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Wo	Would the project:				
a.	Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?			•	
b.	Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse			_	
	gases?		Ц		

Climate Change and Greenhouse Gases

Project implementation would generate greenhouse gas (GHG) emissions through the burning of fossil fuels or other emissions of GHGs, thus potentially contributing to cumulative impacts related to climate change. In response to an increase in man-made GHG concentrations over the past 150 years, California has implemented AB 32, the "California Global Warming Solutions Act of 2006." AB 32 codifies the Statewide goal of reducing emissions to 1990 levels by 2020 (essentially a 15 percent reduction below 2005 emission levels) and the adoption of regulations to require reporting and verification of statewide GHG emissions. Furthermore, on September 8, 2016, the governor signed Senate Bill 32 (SB 32) into law, which requires the State to further reduce GHGs to 40 percent below 1990 levels by 2030. SB 32 extends AB 32, directing the CARB to ensure that GHGs are reduced to 40 percent below the 1990 level by 2030.

On December 14, 2017, CARB adopted the 2017 Scoping Plan, which provides a framework for achieving the 2030 target. The 2017 Scoping Plan does not provide project-level thresholds for land use development. Instead, it recommends that local governments adopt policies and locally-appropriate quantitative thresholds consistent with a statewide per capita goal of six metric tons (MT) CO₂e by 2030 and two MT CO₂e by 2050 (CARB 2017). As stated in the 2017 Scoping Plan, these goals may be appropriate for plan-level analyses (city, county, subregional, or regional level), but not for specific individual projects because they include all emissions sectors in the State.

Most individual projects do not generate enough GHG emissions to directly influence climate change. However, physical changes caused by a project can contribute incrementally to cumulative effects that are significant, even if individual changes resulting from a project are limited. The issue of climate change typically involves an analysis of whether a project's contribution towards an impact would be cumulatively considerable. "Cumulatively considerable" means that the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, other current projects, and probable future projects (CEQA Guidelines, Section 15064[h][1]).

City of Martinez Climate Action Plan

The City of Martinez CAP establishes strategies to reduce GHG emissions known to contribute to climate change, to conserve energy and other natural resources, and to prepare the community for the expected effects of global warming (City of Martinez 2009). The CAP includes specific goals and objectives to reduce GHG emissions, including policies, programs, and actions to facilitate change. The CAP establishes four key GHG emissions categories (transportation, energy, solid waste, and water) as priorities for adapting to the local physical changes in the environment resulting from climate change.

Thresholds

Pursuant to the requirements of SB 97, the California Natural Resources Agency adopted amendments to the CEQA Guidelines for the feasible mitigation of GHG emissions and analysis of the effects of GHG emissions. The adopted CEQA Guidelines provide regulatory guidance on the analysis and mitigation of GHG emissions in CEQA documents, while giving lead agencies the discretion to set quantitative or qualitative thresholds for the assessment and mitigation of GHGs and climate change impacts.

To evaluate whether a project may generate a quantity of GHG emissions that may have a significant impact on the environment, state agencies have developed several operational bright-line significance thresholds. Significance thresholds are numeric mass emissions thresholds that identify the level at which additional analysis of project GHG emissions is necessary. Projects that attain the significance target, with or without mitigation, would result in less than significant GHG emissions.

In late 2015, the California Supreme Court's Newhall Ranch decision confirmed that there are multiple potential pathways for evaluating GHG emissions consistent with CEQA, depending on the circumstances of a given project (Center for Biological Diversity v. Department of Fish and Wildlife (2015) 62 Cal. 4th 204). Given the legislative attention and judicial action regarding post-2020 goals and the scientific evidence that additional GHG reductions are needed through the year 2050, the Association of Environmental Professionals' Climate Change Committee published a white paper in October 2016 to provide guidance on defensible GHG thresholds for use in CEQA analyses and GHG reduction targets in climate action plans in light of the change in focus on the 2030 reduction target and questions raised in the Newhall Ranch case (Association of Environmental Professionals 2016).

The Association of Environmental Professionals Climate Change Committee white paper identified seven thresholds for operational emissions. The following four methods described are the most widely used evaluation criteria.³

Consistency with a Qualified GHG Reduction Plan. For a project located within a jurisdiction
that has adopted a qualified GHG reduction plan (as defined by CEQA Guidelines Section
15183.5), GHG emissions would be less than significant if the project is anticipated by the plan
and fully consistent with the plan. However, projects with a horizon year beyond 2020 should
not tier from a plan that is qualified up to 2020.

³ The three other thresholds are best management practices (BMP/best available mitigation (BAM), compliance with regulations, and a hybrid threshold concept: separate transportation and non–transportation threshold. The BMP/BAM concept would require creation and implementation of an approved list of BMPs to ensure compliance with statewide reduction targets. No such list has been created/approved to date. Compliance with existing regulations is not recommended until the state has developed its regulatory framework to meet 2030 GHG reduction targets. Finally, the hybrid transportation and non-transportation thresholds approach is generally reserved for residential and/or mixed-use projects qualifying for relief from analysis of GHG emissions from cars and light-duty trucks. As such, none of these thresholds specifically apply to this project.

- 2. **Bright line Thresholds.** There are two types of bright line thresholds:
 - a. **Standalone Threshold.** Emissions exceeding standalone thresholds would be considered significant.
 - b. **Screening Threshold.** Emissions exceeding screening thresholds would require evaluation using a second-tier threshold, such as an efficiency threshold or other threshold concept to determine whether project emissions would be considered significant. However, projects with a horizon year beyond 2020 should take into account the type and amount of land use projects and their expected emissions out to the year 2030.
- 3. **Efficiency Thresholds.** Land use sector efficiency thresholds are currently based on AB 32 targets and should not be used for projects with a horizon year beyond 2020. Efficiency metrics should be adjusted for 2030 and include applicable land uses.
- 4. **Percent Below "Business as Usual."** GHG emissions would be less than significant if the project reduces Business as Usual emissions by the same amount as the statewide 2020 reductions. However, this method is no longer recommended following the Newhall Ranch ruling.

Operational emissions methods (1), (3), and (4) are not applicable. The City of Martinez adopted a Climate Action Plan (CAP) in 2009 (City of Martinez 2009). However, the CAP only addresses 2020 emission targets and cannot be used for project streamlining under CEQA. While the CAP may not be used for streamlining the emissions inventories and targets can be used in the development of a project-specific efficiency threshold. Efficiency thresholds are quantitative thresholds based on a measurement of GHG efficiency for a given project, regardless of the amount of mass emissions. These thresholds identify the emission level below which new development would not interfere with attainment of statewide GHG reduction targets. A project that attains such an efficiency target, with or without mitigation, would result in less than significant GHG emissions.

Accordingly, consistent with the concerns raised in the Golden Door (2018) and Newhall Ranch (2015) decisions regarding the correlation between state and local conditions, the 2005 City inventory were evaluated to establish a locally appropriate, evidence-based, project-specific threshold consistent with California's GHG reduction targets.

The CAP provides an inventory of the community wide emissions and breaks the energy emissions into residential, commercial sectors, and industrial categories. The City also includes aggregated emissions from transportation and solid waste emissions. The emissions were reduced by 15 percent to represent the 2020 emission target, and then by another 40 percent to represent the 2030 target as identified in AB 32 and SB 32, respectively. The population and employment projections were taken from the Association of Bay Area Governments Population Projections. Table 7 summarizes the project specific threshold for this analysis.

Table 7 2030 GHG Efficiency Thresholds by Land Use for the City of Martinez

2030 Population	2030 Employment	2030 Emission Target	Threshold
38,480	25,645	162,346 MT CO₂e	2.53 MT CO ₂ e/SP
Source: City of Martinez 2009			

Emissions associated with the project were estimated using CalEEMod, version 2016.3.2. Complete CalEEMod results and assumptions can be viewed in Appendix AQ.

A project's service population includes both its residents and employees. The proposed project would create a population of approximately 437 residents. There would be no permanent employees associated with the proposed project.

a. Would the project generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment?

Construction

Project construction would generate temporary, short-term GHG emissions through travel to and from the worksite and from the operation of construction equipment such as graders, backhoes, and generators. Excavation, grading, and trenching typically generate the greatest amount of emissions due to the use of grading equipment and soil hauling. As there is no applicable construction GHG threshold, this calculation is included for informational purposes in Table 8. Nonetheless, the project applicant would be required to comply with BAAQMD rules and regulations regarding emission control measures, such as the In-Use Off-Road Diesel-Fueled Fleets Regulation and idling restrictions. Therefore, impacts related to GHG emissions generated during construction would be less than significant. This impact will not be discussed in the EIR.

Operation

Table 8 provides the project's estimated operational GHG emissions. Because CalEEMod does not calculate N_2O emissions from mobile sources, N_2O emissions were quantified using guidance from CARB and the EMFAC2017 Emissions Inventory for the Contra Costa County region for the year 2023 (the project operational year) using the EMFAC2011 categories (CARB 2018 and 2019; see Appendix GHG for calculations). Estimated GHG emissions would be approximately 1,068 MT CO_2e per year with the primary source of emissions from mobile sources and energy use. As previously indicated the project would have 437 residents based on 2.4 residents per household in Martinez. This would result in an efficiency of 2.35 MT CO_2e , which is below the locally appropriate project specific significance threshold of 2.53 MT CO_2e per service population (MT CO_2e/SP); therefore, GHG impacts would be less than significant. This impact will not be discussed in the EIR.

Table 8 Combined Annual Emissions of Greenhouse Gases

Emission Source	Annual Emissions (CO₂e in metric tor	ns)
Construction ¹	1,258	
Operational

Total Operation	1,026.13	
Service Population	437	
Project Efficiency	2.35	
Threshold	2.53	
Threshold Exceeded	No	

 $^{^{1}}$ The construction emissions are the total construction GHG emissions summed for all construction years, which provides for a conservative calculation of project efficiency.

Source: Appendix GHG

LESS THAN SIGNIFICANT IMPACT

b. Would the project conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Table 9 evaluates the project's consistency with the applicable GHG reduction measures outlined in the CAP and shows the proposed project would be consistent with those measures. The CAP includes specific goals and measures to meet estimated reductions for compliance with state GHG reduction goals, and the project would comply with these goals and measures.

The project would be required to comply with MMC Section 15.07.010, which incorporates CALGreen and includes specific requirements related to recycling, construction materials, and energy efficiency standards that would apply to project construction to minimize wasteful, inefficient, and unnecessary energy consumption. Therefore, the proposed project would not conflict with state regulations intended to reduce GHG emissions statewide and would be consistent with applicable GHG reduction plans. Impacts related to GHG emissions would be less than significant. This impact will not be discussed in the EIR.

City of Martinez **Amáre Apartment Homes Project**

Table 9 Project Consistency with the Martinez Change Action Plan Programs

Martinez CAP Goal	Project Consistency
Program E1: Martinez Green Building Standards	Consistent. The project would meet the California Green Building Standards Code, which is incorporated into the MMC.
Program SW1: Think Reusable, Less Disposable	Consistent. Consistent with the MMC Chapter 8.19 and CalGreen Building Code, the proposed project would be required to recycle at least 50 percent of its construction waste.
Program W1: Promote Water Conservation	Consistent. The project includes features that would promote water conservation, including a fully automatic water-conserving irrigation system comprised of drip and bubbler applications. Landscaping irrigation control would be operated by a weather-based controller with a rain sensor control to minimize watering during and after rain events.
Program A1 : Tree City USA	Consistent. While the proposed project would remove existing on-site vegetation and 43 trees, it would also involve substantial landscaping, including planting approximately 219 trees, as well as shrubs and ground cover throughout the project site. The project would result in a net increase of 176 trees.

Source: City of Martinez 2009

LESS THAN SIGNIFICANT IMPACT

Hazards and Hazardous Materials Less than Significant **Potentially** with Less than Significant Mitigation Significant **Impact** Incorporated **Impact** No Impact Would the project: a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials? b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment? c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school? d. Be located on a site that is included on a list of hazardous material sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment? e. For a project located in an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area? Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan? g. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?

A Phase I Environmental Site Assessment (ESA) was prepared for the proposed project site by Environmental Resource Group, Inc. on October 5, 2015 (Environmental Resource Group 2015, Appendix ESA). The Phase I ESA included assessment of the project site, general reconnaissance of adjacent properties, background research, a review of available and pertinent local, state, and federal regulatory records regarding the presence of hazardous materials and/or petroleum products at the project site. Information contained in this section is based, in part, on the findings of the Phase I ESA.

- a. Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?
- b. Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

According to the Phase I ESA, the adjoining properties are not of potential environmental concern to the project site. Historical uses of adjoining properties are not of environmental concern, and during site reconnaissance, no items of potential environmental concern were identified at the project site.

Potentially hazardous materials such as fuels, lubricants, and solvents would be used during project construction. However, the transport, use, and storage of hazardous materials during project construction would be conducted in accordance with all applicable state and federal laws, such as the Hazardous Materials Transportation Act, Resource Conservation and Recovery Act, the California Hazardous Material Management Act, and the CCR, Title 22. The proposed project would involve the minimal use, storage, transportation, or disposal of hazardous materials as they are used for household use, landscaping on site, or those associated with vehicular traffic. The Contra Costa Sanitary District Household Hazardous Waste collection facility collects and disposes of household hazardous waste produced by residents (Central San 2020). The minimal amounts of household hazardous wastes that would be produced would result in less than significant impacts. Therefore, through compliance with applicable laws and regulations, the project would have a less than significant impact. This impact will not be discussed in the EIR.

LESS THAN SIGNIFICANT IMPACT

c. Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school?

The project site is not located within 0.25 mile of an existing or proposed school. The nearest school is Hidden Valley Elementary School, located approximately 0.7 mile southwest of the project site. Project operation would not involve use or storage of hazardous materials. Though potentially hazardous materials such as fuels, lubricants, solvents, and oils could be used during project construction, the transport, use, and storage of any and all hazardous materials would be conducted in accordance with all applicable State and federal lows, such as the Hazardous Materials Transportation Act, Resource Conservation and Recovery Act, the California Hazardous Material Management Act, and the CCR, Title 22. Due to the distance to the nearest school, impacts to schools associated with hazardous emissions would be less than significant. This impact will not be discussed in the EIR.

LESS THAN SIGNIFICANT IMPACT

d. Would the project be located on a site that is included on a list of hazardous material sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Review of the California Department of Toxic Substances Control EnviroStor database (2019) and the State Water Resources Control Board GeoTracker database (2020) did not identify hazardous waste sites within 0.25 mile of the project site. The project would not be located on a site included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. This impact will not be discussed in the EIR.

NO IMPACT

e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

The nearest airport to the project site is the Buchanan Field Airport, located approximately 1 mile east of the project site. Although Figure 3A of the Contra Costa County Airport Land Use Compatibility Plan shows the proposed project area as within the Buchanan Field Airport Influence Area, figures 3B and 3C of the report show the project site is not within a noise contour area or safety zone area, respectively. Therefore, the proposed project would not result in a safety hazard or excessive noise for people residing or working at the project site, this would be a less than significant impact and will not be discussed in the EIR.

LESS THAN SIGNIFICANT IMPACT

f. Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

The project would include two access points on Arnold Drive that would provide sufficient emergency access. The project would be required to comply with applicable City codes and regulations pertaining to emergency response and evacuation. Furthermore, project construction would not require lengthy roadway/lane closures or detours during construction activities and would not alter emergency access to the project site or on Arnold Drive. As the project would not alter the existing transportation infrastructure, it would not interfere with an adopted emergency response plan or emergency evacuation plan. Therefore, the project would have a less than significant impact and this issue will not be discussed in the EIR.

NO IMPACT

g. Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?

The proposed project is not located in or near very high fire hazard severity zone (California Department of Forestry and Fire [CAL FIRE] 2009). The closest very high fire hazard severity zone is over 2.5 miles to the west of the project site. The project site is in an urbanized area. Thus, the proposed project would not expose people or structures to a significant wildfire risk. Nevertheless, the proposed project would be required to comply with the MMC Chapter 15.28, Fire Prevention Code, which adopts the Contra Costa County Fire Protection District's Fire Prevention Code by reference and includes policies and requirements intended to protect residents of Contra Costa County from potential fire hazard, including requirements for vegetation removal, maintain adequate water supply, and ensure emergency access. Therefore, the proposed project would not

City of Martinez

Amáre Apartment Homes Project

expose people or structures to wildfire risk; compliance with applicable municipal codes would further reduce potential risks. This impact would be less than significant and will not be discussed in the EIR.

LESS THAN SIGNIFICANT IMPACT

10 Hydrology and Water Quality Less than **Significant Potentially** with Less than Significant **Significant** Mitigation **Impact** Incorporated **Impact** No Impact Would the project: a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality? b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin? c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would: (i) Result in substantial erosion or siltation on- or off-site; (ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site; (iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or (iv) Impede or redirect flood flows? d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation? e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

a. Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

The project site is currently undeveloped and contains steep slopes that drain into an existing drainage ditch. The proposed project would create changes to stormwater flow and introduce additional urban pollutants to the stormwater system through runoff. Furthermore, construction activities could result in temporary impacts to the quality of runoff leaving the site.

Grading activity during construction has the potential to impact water quality through erosion and through debris carried in runoff. Furthermore, the project construction would involve heavy equipment that could result in an increase in fuel, oil, and lubricants in the stormwater runoff due to leaks or accidental releases. The State Water Resources Control Board regulates stormwater discharges associated with construction activities where clearing, grading, or excavation results in a land disturbance of one or more acres. As the site is over one acre in size, it would be subject to these regulations. Performance Standard NDCC-13 of the City's National Pollutant Discharge Elimination System (NPDES) permit requires applicants to show proof of coverage under the State's General Construction Permit prior to receipt of any construction permits. The State's General Construction Permit requires a SWPPP to be prepared for the proposed project. A SWPPP describes BMPs to control or minimize pollutants from entering stormwater and must address both grading/erosion impacts and non-point source pollution impacts of the development project, including post-construction impacts. BMPs that would be required under the SWPPP may include but would not be limited to the following:

- Temporary erosion control measures (such as silt fences, staked straw bales/wattles, silt/sediment basins and traps, check dams, geofabric, sandbag dikes, and temporary revegetation or other ground cover) shall be employed to control erosion from disturbed areas.
- Use a dry stormwater quality basin (which is typically dry except after a major rainstorm, when the basin would temporarily fill with stormwater), designed to decrease runoff during storm events, prevent flooding, and allow for off-peak discharge. Basin features shall include maintenance schedules for the periodic removal of sediments, excessive vegetation, and debris that may clog basin inlets and outlets.
- Cover, or apply nontoxic soil stabilizers to, inactive construction areas (previously graded areas inactive for 10 days or more) that could contribute sediment to waterways.
- Enclose and cover exposed stockpiles of dirt or other loose, granular construction materials that could contribute sediment to waterways.
- Ensure that no earth or organic material shall be deposited or placed where the material could be directly carried into a stream, marsh, slough, lagoon, or body of standing water.
- Prohibit the following types of materials from being rinsed or washed into the streets, shoulder areas, or gutters: concrete, solvents and adhesives, thinners, paints, fuels, sawdust, dirt, gasoline, asphalt and concrete saw slurry, and heavily chlorinated water.
- Ensure that grass or other vegetative cover be established on the construction site as soon as possible after disturbance.

Additionally, a drainage system would be included as part of the final project design that would ensure that runoff from new impervious surfaces can percolate into the groundwater, including flow-through planters. The proposed project also includes three bio-retention areas that would retain runoff. Additionally, the City would review the drainage plan for its ability to adhere to water quality regulations.

With compliance with existing regulations, impacts would be less than significant. This impact will not be discussed in the EIR.

LESS THAN SIGNIFICANT IMPACT

b. Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

The City receives untreated imported water from Contra Costa Water District (CCWD) via the Contra Costa Canal, which is part of the Central Valley Project developed by the U.S. Bureau of Reclamation. CCWD stores this water in the Martinez Reservoir, which is located at the terminus of the Contra Costa Canal and CCWD's Shortcut Pipeline. Martinez Reservoir is an open, earthen reservoir and is estimated to have a capacity of 79.6 million gallons (MG) based on a 2003 bathymetry. Groundwater resources in the CCWD service area do not supply significant amounts of water to meet or augment untreated water demands (City of Martinez 2016). Therefore, no incremental increase in demand on groundwater supplies would occur, as CCWD does not use groundwater as a major source of water and the proposed project does not involve the placement or use of groundwater wells.

The project site is currently undeveloped and groundwater infiltration occurs throughout the site. Shallow groundwater at the site was measured at depths ranging from approximately 10 to 13.5 feet below ground surface (Cornerstone Earth Group 2009). The project site features an existing drainage ditch that extends near the north middle portion of the site and crosses towards the southeast corner of the site project. As this drainage ditch is unlined, stormwater flowing in it can pool and infiltrate into the underlaying soils before it is discharged into the existing storm drain infrastructure. However, much of the stormwater entering the project site flows off-site and enters the stormwater system as runoff before infiltrating underlaying soils. As a result, the proposed project site itself is not estimated to contribute significantly to groundwater recharge. The proposed project would introduce 153,875 square feet of new impervious surfaces, which represents 58.3 percent of the site. This would impede groundwater recharge within the footprint of impervious surfaces. However, a drainage system is proposed that would ensure runoff from new impervious surfaces is allowed to percolate into the groundwater, including flow-through planters. The proposed project also includes three bio-retention areas that would allow for some percolation of water into the underlying soils and potentially contribute to groundwater recharge. Therefore, considering that the proposed project's drainage design would allow water to infiltrate into soil, the project would not substantially interfere with groundwater recharge, and these impacts would be less than significant.

Because the project would not result in an incremental increase in demand on groundwater, and the project would not interfere with groundwater recharge, this impact would be less than significant. This impact will not be discussed in the EIR.

LESS THAN SIGNIFICANT IMPACT

c.(i) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would result in substantial erosion or siltation on- or off-site?

The site's existing drainage pattern is currently uncontrolled. All municipalities within Contra Costa County are required to develop more restrictive surface water control standards for new development projects to comply with Provision C.3 of the Regional Water Quality Control Board (RWQCB) Municipal Regional Stormwater NPDES Permit order No. R2-2015-0049. The Contra Costa County Clean Water Program developed a Stormwater C.3 Guidebook for implementing the RWQCB Municipal Regional Stormwater NPDES Permit C.3 requirements, known as the "C.3 Standards." Development projects that create or replace 10,000 or more square feet of impervious surface area must contain and treat stormwater runoff from the site. The proposed project is a C.3 regulated project, and, thus, is required to include appropriate site design measures, source controls, and hydraulically-sized stormwater treatment measures.

A Stormwater Control Plan has been prepared for the proposed project, consistent with C.3 requirements as per the Contra Costa County Clean Water Program Stormwater C.3 Guidebook, the proposed project would include a series of coordinated integrated management practices (IMP) to remove pollutants and slow runoff. The IMPs would be hydrologically sized to accept runoff from specific drainage management areas, based on the anticipated runoff factor from such areas. Generally, the IMPs included in the proposed project consist of either flow-through planters or bioretention facilities. Flow-through planters would accept drainage from roof areas through downspouts. Stormwater would then interact with permeable soil materials within the planters prior to discharge into storm drain piping within the planters. Bioretention facilities would be constructed with a layer of permeable soils over a second layer of permeable materials surrounded by non-compacted native soils. Runoff entering the bioretention areas would interact with the active soil layer before percolating through the bioretention facility and eventually reaching a perforated subdrain storm pipe. The sub drain storm pipe would direct stormwater to storm drainage infrastructure. Both the flow-through planters and the bioretention facilities would be planted with vegetation, and the process of allowing stormwater to flow through permeable layers would allow for stormwater filtration while also slowing the velocity of runoff prior to discharge into storm drain infrastructure.

Because the proposed project would include IMPs to properly treat and control runoff from the project site, it would not result in the discharge of pollutants or increases in stormwater discharge that could lead to erosion or siltation. Impacts would be less than significant. This impact will not be discussed in the EIR.

LESS THAN SIGNIFICANT IMPACT

c.(ii) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?

The Stormwater Control Plan prepared for the proposed project includes calculations for the minimum treatment area and volume needed per the Stormwater C.3 Guidebook. The IMPs would be designed to exceed the minimum volume needed to treat and control runoff from all proposed impervious surfaces. Consequently, while the proposed project would include changes to the project site, the proposed project would include IMPs that would be designed to ensure that the proposed project does not substantially alter the existing drainage pattern of the site through increased stormwater runoff or result in post-project stormwater runoff exceeding pre-project levels of runoff. Therefore, the project would have a less than significant impact as no increase in surface runoff would occur, and no increased flooding would occur on or off-site. This impact will not be discussed in the EIR.

LESS THAN SIGNIFICANT IMPACT

c.(iii) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner that would create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

The Stormwater Control Plan and IMPs would ensure the project site would not provide a substantial source of polluted runoff. As discussed above under threshold c.(i), the project would properly treat and control runoff, and therefore would not provide a substantial source of polluted runoff. As discussed under threshold c.(ii), post-project stormwater runoff would not exceed preproject runoff levels, and therefore the project would not exceed the capacity of existing or planned stormwater drainage systems. This impact would be less than significant. This impact will not be discussed in the EIR.

LESS THAN SIGNIFICANT IMPACT

c.(iv) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would impede or redirect flood flows?

Streams or rivers do not exist within the site, but a 48-inch storm drain and a man-made ditch traverse the site, collecting and conveying runoff from surrounding development areas and discharging the runoff into the storm drain system along Arnold Drive. In addition to the existing storm drain infrastructure on the project site, the Mountain View Sanitary District (MVSD) operates a sewer lift station on the project site. To avoid the potential for stormwater runoff passing through the site, and generated on the site, from backing up and inundating the MVSD site, the proposed project would include removal and replacement of the existing 48-inch storm drainpipe with a 60-inch pipe, and other infrastructure improvements. Replacement of the existing storm drain infrastructure and the inclusion of the on-site IMPs would ensure that the public storm drain infrastructure would continue to function in the current fashion and would be adequately sized to handle 100-year storm events with project implementation (Gossett Civil Engineering 2017; Appendix HYD).

The project would not substantially alter the existing drainage pattern of the site or area in a manner that would impede or redirect flood flows, and infrastructure would be adequately sized for flood events. Consequently, impacts would be less than significant. This impact will not be discussed in the EIR.

LESS THAN SIGNIFICANT IMPACT

d. In flood hazard, tsunami, or seiche zones, would the project risk release of pollutants due to project inundation?

According to the Federal Emergency Management Agency Flood Insurance Rate Map (FIRM), the project site is located in Zone X, which is characterized as an area of minimal flood hazard and having a less than 0.2 percent annual chance to be inundated by flood waters as a result of a storm event (Map # 06013C0277F, June 16, 2009) (Federal Emergency Management Agency 2009). As Therefore, impacts due to project release of pollutants due to flood hazard would be less than significant.

The project site is located approximately 3.5 miles east of the San Francisco Bay and is not located in a tsunami or seiche zone (DOC 2019). The Martinez Dam, which contains the Martinez Reservoir, is the closest dam to the project site, at more than 1.5 miles northwest of the site. Based on the distance, the project site is not in the inundation area for this dam or for any other dam or levee. Therefore, the proposed project would not result in the risk of release of pollutants due to inundation by a tsunami, seiche, or flooding. Impacts would be less than significant. This impact will not be discussed in the EIR.

LESS THAN SIGNIFICANT IMPACT

e. Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

The Water Quality Control Plan for the San Francisco Bay Basin includes the project site within the plan boundaries. The plan includes goals for beneficial uses of water in the region. The project would not conflict with these goals or otherwise degrade the water quality of surface water and groundwater in the area, as bioretention facilities would be installed as part of the project to improve the water quality of stormwater runoff. Therefore, the project would not conflict with or obstruct the implementation of applicable plans, and impacts would be less than significant.

The project would be served by CCWD, which maintains an Urban Water Management Plan (UWMP) (CCWD 2016). The UWMP includes the District's planning activities to ensure adequate water supplies to meet existing and future demands for water. CCWD utilizes water treatment plants to ensure water quality standards and goals are met. Implementation of the project would increase water demand at the project site, but the project would not interfere with the ability of CCWD to maintain water quality standards, as described in the UWMP.

Furthermore, the proposed project would be directly adjacent to the Ygnacio Valley Groundwater Basin (Basin 2-6), which is not identified as a high priority basin and does not have a developed a Groundwater Sustainability Plan to date. Because no groundwater management plans are currently adopted or approved for groundwater use in the project vicinity, and the project would not introduce more intensive uses or more water-demanding uses than allowed under existing zoning, no impact would occur. This impact will not be discussed in the EIR.

NO IMPACT

11	11 Land Use and Planning				
		Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Wo	Would the project:				
a.	Physically divide an established community?				-
b.	Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?				

a. Would the project physically divide an established community?

Project implementation would continue the existing residential development pattern in the neighborhood and would not cut off connected neighborhoods or land uses from each other. Furthermore, the proposed project site does not contain existing housing or other development. No new roads, linear infrastructure or other development features are proposed that would divide an established community or limit movement, travel or social interaction between established land uses. This impact will not be discussed in the EIR.

NO IMPACT

b. Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

The project site is designated in the City's General Plan as Mixed Residential/Office (MR/O) (City of Martinez 1973) and is zoned within a Mixed Use District: Multi-Family Residential/Professional and Administrative Offices (M-R-1.5/PA). The project site is surrounded by a mix of land uses including single-family residential development, and the project would result in construction of a residential apartment complex that would also comply with the designated land use and zoning. The project site is identified in the City's Housing Element, Appendix A, as being suitable for residential development (City of Martinez 2011). Therefore, the proposed project would be generally consistent with the type of land uses surrounding the project and anticipated under the City's General Plan and zoning ordinance.

The project would provide 1,426 square feet of space per dwelling unit, which is less than the 1,500-square foot requirement, but greater than the 1,250-square foot minimum for R-1.5 zoning districts. The project would be consistent with the allowable lot coverage, as it would result in a 21.4 percent coverage of the project site, which is below the 40 percent maximum allowed by the Martinez Municipal Code Section 22.12.210 for R-1.5 zoning districts.

The proposed project includes requests for various approvals, including a waiver to provide for 96 fewer parking spaces than those required by the City, drive aisle width waiver, and allowance for

non-standard parking space design. It also requests a use waiver to allow for increased building heights. The requested waivers and permits are policy issues under the purview of the Martinez Planning Commission and City Council. These waivers would address inconsistencies with the zoning code. The provision of fewer and non-standard parking spaces would not result in significant impacts because parking is not an environmental impact under CEQA. As outlined in Section 1, *Aesthetics,* the increased building heights would not result in significant impacts to aesthetic resources in the project area. Thus, the approval of parking exceptions and the density bonus waiver would not result in significant environmental impacts.

With approval by the City Council of the requested entitlements and given the project's compliance with the designated land use and zoning of the project site, the project would have a less than significant impact regarding conflicts with land use plans, policies, or regulations adopted for the purpose of avoiding or mitigating an environmental effect. The project's consistency with applicable local land use and policy programs or regulations adopted to avoid such effects is described in more detail in Table 10.

Table 10 Project Consistency with General Plan Policies

General Plan Policy Project Consistency 21.31 Protected Neighborhoods Consistent. The proposed project has been designed to protect some of the existing slope areas and would 21.311 Existing neighborhoods shall retain their present incorporate retaining walls and proper grading practices housing roles and the existing residential character to avoid potential slope-related hazards. Although the preserved and enhanced. Non-residential uses, other than project includes a request for a height concession to allow those providing services primarily to residents within the for an increase in maximum building height, the proposed neighborhoods, shall be prohibited. structures would be built with respect to the natural grade 21.312 To respect the established physical patterns of of the project site, with taller buildings (Building 5) these neighborhoods, new residential structures should shielded from adjacent uses by shorter buildings (Buildings be similar in scale and type of accommodations to existing 4, 6, and 7). units. 21.32 Hill Residential Areas **Consistent**. While the project site contains slopes steeper than 10 percent, the proposed residences would be 21.321 All land designated for residential use with slopes located on areas of the site where slopes range from 3 to in excess of ten percent shall be developed in a manner 6 percent. The steep ridgeline area along the project site's which respects the site's natural features and protects southern boundary would not be substantially altered by against natural hazards common to most hill area sites in the project. The proposed project also includes a density Martinez. Allowable residential density shall be governed bonus and associated concession from the City's hillside by the City's slope density ordinance. Use of planned unit regulations and slope density ordinance, pursuant to the development approach is made mandatory in order that California Density Bonus Law (Government Code section conditions unique to each site can be considered. 65915). With the requested concession, the project would be consistent with this policy. Consistent. Refer to Section 7, Geology and Soils, criterion 22.4 Conservation Lands Policies (b) regarding erosion and loss of topsoil. As stated therein, 22.43 Grading alterations should not induce or accelerate natural channel grading, sheet erosion, gullying and other the project would be required to implement BMPs and obtain coverage under the SWPPP to reduce erosion and forms of erosion. topsoil loss during project construction. 22.45 Any tree removal required by development should Consistent. While 43 trees would be removed as part of be based upon a selective thinning program utilizing the the project, 219 new trees would be planted throughout principles of natural plant succession. the site as part of the landscaping plan. Additionally, 17 existing trees would remain on site and be protected in place during construction. 24.22 Other Geologic Hazards and Constraints Consistent. Refer to Section 7, Geology and Soils, criterion (d) regarding expansive soils, which will be evaluated in the EIR.

General Plan Policy	Project Consistency
General Flair Folicy	FIGURE CONSISTENCY

24.223 Construction in areas containing soils with high "shrink-swell" properties will require employment of special foundation techniques to offset these effects.

The proposed project would be generally consistent with applicable City land use plans, policies, and regulations adopted for the purpose of avoiding or mitigating environmental impacts. Impacts would be less than significant. This impact will not be discussed in the EIR.

LESS THAN SIGNIFICANT IMPACT

12	2 Mineral Resource	es :			
		Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Wo	ould the project:				
a.	Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?				
b.	Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land				
	use plan?				

- a. Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?
- b. Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

According to the State Division of Mines and Geology, the proposed project site does not contain any identified mineral resources (California Division of Mines and Geology 1996). The City's General Plan and the County General Plan do not identify any significant mineral resources or mining operations in Martinez (City of Martinez 1973; Contra Costa County 2004). Therefore, no impact would occur. This impact will not be discussed in the EIR.

NO IMPACT

13	3 Noise				
		Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Wo	ould the project result in:				
a.	Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?				
b.	Generation of excessive groundborne vibration or groundborne noise levels?	•			
c.	For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?				

- a. Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?
- b. Would the project result in generation of excessive groundborne vibration or groundborne noise levels?
- c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

The project is located in proximity to noise-sensitive land uses and may result in a significant temporary or permanent noise impact to nearby sensitive receivers. Construction may result in substantial vibration. The nearest airport, Buchanan Field, is located one mile east of the project site. Impacts may be potentially significant. This impact will be discussed in the EIR.

POTENTIALLY SIGNIFICANT IMPACT

	This page left blank intentionally.		

14	14 Population and Housing				
		Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Wo	ould the project:				
a.	Induce substantial unplanned population growth in an area, either directly (e.g., by proposing new homes and businesses) or indirectly (e.g., through extension of roads or other infrastructure)?			•	
b.	Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?				

a. Would the project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

The proposed project would directly induce population growth in the area through the proposed construction of 182 dwelling units. According to the Bay Area Census the average household size in Martinez is 2.4 people per household (U.S. Census 2010). With 182 units, the proposed project would result in approximately 437 new residents. The City of Martinez's current population is approximately 38,402 people. Plan Bay Area anticipates that the population of the City will grow to 40,035 by 2040 (Association of Bay Area Governments 2020). The project's increase falls within the growth projected by Plan Bay Area. Therefore, the proposed project would not directly or indirectly induce substantial, unplanned population growth. This impact will not be discussed in the EIR.

LESS THAN SIGNIFICANT IMPACT

b. Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

The project site does not currently contain housing or habitable structures, and thus the project would not result in the displacement of people or housing from the city. There would be no impact. This impact will not be discussed in the EIR.

NO IMPACT

15	5	Public Services				
			Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a.	adv the gov nev faci cau in c rati per	revised the project result in substantial verse physical impacts associated with provision of new or physically altered vernmental facilities, or the need for v or physically altered governmental dilities, the construction of which could use significant environmental impacts, or the maintain acceptable service os, response times or other formance objectives for any of the olic services:				
	1	Fire protection?			-	
	2	Police protection?			•	
	3	Schools?			•	
	4	Parks?			•	
	5	Other public facilities?			•	

a.1. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered fire protection facilities, or the need for new or physically altered fire protection facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives?

Fire protection is provided to the project site by the Contra Costa County Fire Protection District (CCCFPD). CCCFPD Station 15 is located at 251 Church Street and Station 14 located at 1240 Shell Avenue; both are within three miles of the project site. CCCFPD Ordinance 2013-25 requires that all new development complete a plan review, inspection, and pay associated fees. Per CCCFPD Ordinance 2013-25, the proposed project would be required to incorporate recommendations for fire prevention and emergency access into the project design. MMC Chapter 21.20 requires the installation of fire hydrants, where applicable, in accordance with standard established by the National Board of Fire Underwriters and the determination of the CCCFPD Fire Chief and City Engineer. Furthermore, the proposed project would be required to be constructed to the most recent applicable California Fire Code requirements. Since the proposed project would be required to be built to all applicable standards, as well as review and incorporation of recommendations by the CCCFPD and payment of applicable fees (if needed), the proposed project would not be anticipated to result in a significant increase in fire service demand at the project site. Therefore,

the proposed project would have a less than significant impact related to the need for new or physically altered fire protection facilities. This impact will not be discussed in the EIR.

LESS THAN SIGNIFICANT IMPACT

a.2. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered police protection facilities, or the need for new or physically altered police protection facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives?

The City of Martinez Police Department serves the proposed project site. To offset new demand for police services the City charges an impact/mitigation fee for new development. Payment of this fee would ensure that the proposed project would not result in a substantial adverse physical impact associated with the provision of new or physically altered police facilities. Furthermore, the proposed project is consistent with the general plan and zoning designations for the project site, and, as such, increase in police service demand from development of the site would have been included in growth estimates for citywide police service demand. Therefore, the project would not result in the need for new or expanded police protection facilities to serve the project. This impact will not be discussed in the EIR.

LESS THAN SIGNIFICANT IMPACT

a.3. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered schools, or the need for new or physically altered schools, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios or other performance objectives?

The project site is located in the Martinez Unified School District Mount Diablo Unified School District. Based on a conservative metric of 19.6 percent of the population of Martinez under the age of 18, the project would generate approximately 86 children (U.S. Census Bureau 2019). The project applicant would be required to pay school development fees, as dictated by state law, prior to the issuance of building permits. According to Government Code Section 65996 (3)(h), payment of such fees constitutes full mitigation of any school impacts under CEQA. Therefore, any impacts from the increase in school enrollment would be offset by the required payment of development fees. This impact would be less than significant and will not be discussed in the EIR.

LESS THAN SIGNIFICANT IMPACT

a.4. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered parks, or the need for new or physically altered parks, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios or other performance objectives?

Based on the average person per household rate from the City's Housing Element, the proposed project is anticipated to result in 437 new residents, based on an average household size of 2.4 and 182 proposed units (City of Martinez 2011). According to MMC Chapter 22.04.560 the proposed project would be required to provide 73,200 square feet of open space. The current project design incorporates 77,855 square feet (over two acres) of open space, which would exceed the requirement. Project residents would be expected to use on-site facilities, which would reduce the increase in demand for existing City parks. As such, creation of on-site open space would ensure

that the proposed project would not result in substantial adverse physical impacts associated with the provision of new or physically altered park facilities. Because the project does not propose dedicating land or building a park and recreational facility, the project would be required to pay the City's Parks In-Lieu fees for the provision and maintenance of parkland that may be used by project residents, as described in Chapter 21.46 of the MMC. Therefore, the proposed project would result in a less than significant impact in regard to public parks. This impact will not be discussed in the EIR.

LESS THAN SIGNIFICANT IMPACT

a.5. Would the project result in substantial adverse physical impacts associated with the provision of other new or physically altered public facilities, or the need for other new or physically altered public facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives?

Other public facilities in the project area include the Martinez Public Library, the Martinez Senior Center, the Martinez Marina, the Martinez Waterfront Amphitheater, and the Martinez Historic Museum. The proposed project would increase demand for those facilities and general City maintenance services. However, these demands would not be significant given the scale of the proposed development relative to the overall population of the area. The population of Martinez is 38,402, and the project would result in 437 new residents, which would be 1.1 percent of the existing population and would present a minimal increase. Payment of user fees or taxes and development impact fees to the appropriate service providers, such as under Chapter 21.46 of the MMC, is expected to off-set potential impacts to such public facilities, the additional demands for other governmental services would result in a less than significant impact. This impact will not be discussed in the EIR.

LESS THAN SIGNIFICANT IMPACT

1	6 Recreation				
		Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a.	Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?				
b.	Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?				

a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

As discussed in Section 15, *Public Services*, the on-site open space would ensure that the proposed project would not result in substantial adverse physical impacts associated with the provision of new or physically altered park facilities. Additionally, the project would be required to pay Quimby Act and impact fees for the provision and maintenance of park and recreational services that may be used by project residents. Impacts would be less than significant.

LESS THAN SIGNIFICANT IMPACT

b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

The proposed project includes several private site amenities such as a common courtyard and outdoor cooking facility. To construct the residences and associated driveways, the project would involve removing trees and grading along the hillside to the south. Impacts to biological resources associated with construction will be addressed in the EIR. However, the addition of 437 new residents would add approximately one percent to the City's population; this would not require the construction of new recreational facilities that would cause an adverse physical effect on the environment. Therefore, impacts would be less than significant and this impact will not be discussed in the EIR.

LESS THAN SIGNIFICANT IMPACT

17	7 Transportation				
		Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Wo	ould the project:				
a.	Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?				
b.	Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	•			
c.	Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible use (e.g., farm equipment)?	•			
d.	Result in inadequate emergency access?				

- a. Would the project conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?
- b. Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?
- c. Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible use (e.g., farm equipment)?
- d. Would the project result in inadequate emergency access?

The project would introduce 182 new residential units and 437 new residents to the project site, which would increase traffic and vehicle miles travelled in the area. These impacts will be addressed in the EIR.

POTENTIALLY SIGNIFICANT IMPACT

City of Martinez

Tribal Cultural Resources Less than Significant Potentially with Less than Significant Mitigation Significant Impact Incorporated Impact No Impact

Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in a Public Resources Code Section 21074 as either a site, feature, place, or cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

- a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or
- b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

California AB 52 was enacted in 2015 and expands CEQA by defining a new resource category, "tribal cultural resources." AB 52 states, "A project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment" (Public Resource Code Section 21084.2). It further states the lead agency shall establish measures to avoid impacts altering the significant characteristics of a tribal cultural resource, when feasible (Public Resource Code Section 21084.3).

Public Resource Code Section 21074 (a)(1)(A) and (B) defines tribal cultural resources as "sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe" and is:

- 1. Listed or eligible for listing in the CRHR or in a local register of historical resources as defined in PRC section 5020.1(k).
- 2. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resource Code Section 5024.1. In applying these criteria, the lead agency shall consider the significance of the resource to a California Native American tribe.

Amáre Apartment Homes Project

AB 52 also establishes a formal consultation process for California tribes regarding those resources. The consultation process must be completed before a CEQA document can be certified or adopted. Under AB 52, lead agencies are required to "begin consultation with a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project." Native American tribes to be included in the process are those having requested notice of projects proposed in the jurisdiction of the lead agency.

- a. Would the project cause a substantial adverse change in the significance of a tribal cultural resource as defined in Public Resources Code Section 21074 that is listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?
- b. Would the project cause a substantial adverse change in the significance of a tribal cultural resource as defined in Public Resources Code 21074 that is a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1?

In compliance with AB 52 (Public Resources Code Section 21080.3.1), the City sent a project notification letter to the Ione Band of Miwok Indians, the only group who had requested notification from the City of Martinez, on April 11, 2016. The Ione Band of Miwok Indians did not respond to the request for consultation. Additionally, a search of the Sacred Lands File conducted by the Native American Heritage Commission for the project did not identify any sacred lands in the project area. However, because the project involves ground disturbance, there is the possibility of encountering undisturbed subsurface tribal cultural resources during construction of the project. This impact would be potentially significant and will be discussed in the EIR.

POTENTIALLY SIGNIFICANT IMPACT

19	19 Utilities and Service Systems					
		Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact	
Wo	uld the project:					
a.	Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?			•		
b.	Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?					
c.	Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?			•		
d.	Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?					
e.	Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?			•		

- a. Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?
- b. Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?
- c. Would the project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Water

CCWD would provide potable water service to the proposed project. The CCWD obtains surface water from the San Joaquin River Delta. The water supplied by CCWD to the City is treated at the Bollman Water Treatment Plant and distributed through a system of pipelines and pump stations. The proposed project would make domestic and fire line connections to existing water utility lines within Arnold Drive.

The CCWD anticipates growth to occur in its service area, including Martinez, that would increase water service demand. Growth estimates for the CCWD service area are based on local land use designations, and growth estimates for the region. Because the proposed project would be consistent with the land use and zoning designations for the project site, increases in water demand from the project would have been generally considered in the CCWD's regional growth estimates. According to Table 7-4W, of the CCWD's UWMP, the CCWD would have adequate supplies to meet the district's demand during normal years as well as during multiple dry-years (CCWD 2016). Thus, the CCWD is anticipated to continue to supply the City with adequate water supplies, which the City will use to meet water service demands within the City's service area.

The proposed project would be required to comply with the CALGreen Code standards, which would help to reduce water consumption at the site. Landscaping would be designed to incorporate drought tolerant landscaping and efficient irrigation systems to reduce irrigation water consumption. Therefore, water supply impacts of the proposed project would be less than significant. This impact will not be discussed in the EIR.

Wastewater

MVSD would provide sewer services to the proposed project via 8-inch sanitary sewer lines connecting to the proposed apartment buildings. The 8-inch sewer lines would transport wastewater to the existing sewer pump station located adjacent to Arnold Drive.

MVSD has anticipated that continued growth in Martinez and surrounding areas would increase wastewater service demand in the MVSD service area. Growth in Martinez has been planned through the City's General Plan and zoning designations. Therefore, the increase in wastewater demand from development consistent with the City's General Plan and zoning designations has also been anticipated by MVSD. As discussed in Section 11, *Land Use and Planning*, the proposed project would be consistent with the City's General Plan land use and zoning designations for the site. Therefore, the increase in demand from the project has been anticipated by the MVSD.

The MVSD wastewater treatment plant received 1.25 mgd of wastewater per day. The wastewater treatment plant has a design capacity of 3.2 mgd. Therefore, the wastewater treatment plant has an available capacity of 1.95 mgd. The current flow of 1.25 mgd of wastewater is generated by 18,253 residents, 269 commercial and industrial connections, and 283 institutional connections (Contra Costa Local Agency Formation Committee 2014). As discussed in Section 14, *Population and Housing*, the project would result in 437 residents on the project site. Therefore, the proposed project would contribute a relatively small increase in wastewater, compared to the existing generation from the MVSD service area and the existing capacity at the wastewater treatment plant. Considering the relatively small increase in wastewater anticipated during project operation, the MVSD wastewater treatment plant would have adequate capacity to serve the proposed project.

The project applicant would be required to obtain a sewer connection permit and pay permit fees for trunk sewer, plant capacity, and connection prior to connecting to the MVSD's system. The

process of obtaining a connection permit and paying permit fees would help ensure that adequate capacity is available to serve the project's projected demand for services. Therefore, the proposed project would not require the construction of new municipal wastewater treatment facilities or impact the treatment capacity of existing municipal wastewater treatment providers. Impacts to wastewater treatment facilities would be less than significant. This impact will not be discussed in the EIR.

Stormwater

The project would be designed and engineered with drainage features appropriate to accommodate stormwater runoff from the project site. As discussed in Section 10, *Hydrology and Water Quality*, the project would be required to comply with requirements of the General Construction Permit and City requirements, including implementing the project specific Stormwater Control Plan and design BMPs to ensure minimal erosion, siltation, flooding, and polluted runoff occur from development of the site. The proposed project would improve the existing stormwater drainage facilities on-site to ensure enough capacity exists to handle the stormwater flows from the proposed project and surrounding drainage area. Off-site improvements to the existing stormwater infrastructure are not required. As the proposed project would not require new or expanded off-site stormwater infrastructure improvements, impacts would be less than significant. This impact will not be discussed in the EIR.

Electricity, Natural Gas, and Telecommunications

Marin Clean Energy (MCE) Community Choice Energy and/or PG&E would provide electricity to the project site, and PG&E would provide natural gas. AT&T or Comcast would provide telecommunications services, at the discretion of the project residents. The project's demand for these services would not exceed the capacity of local providers that serve the region. Accordingly, the project would be accommodated adequately by existing electricity, natural gas, and telecommunication facilities and would not require improvements to existing facilities, or the provision of new facilities, that would cause significant environmental effects. This impact would be less than significant. This impact will not be discussed in the EIR.

LESS THAN SIGNIFICANT IMPACT

- d. Would the project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?
- e. Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Republic Services provides solid waste service including public trash, recyclables, and green waste collection in the City. The proposed project would generate solid waste during construction and operation. Consistent with the MMC Chapter 8.19 and CalGreen Building Code, the proposed project would be required to recycle at least 50 percent of its construction waste. The project would not involve demolition activities; therefore, construction activities would not generate substantial solid waste.

Republic Services would collect solid waste generated by project operation and transfer it to the Keller Canyon Landfill, which serves Contra Costa County. The permitted daily throughput of this landfill is 3,500 tons per day, the estimated average waste quantities disposed is 3,000 tons per day,

City of Martinez

Amáre Apartment Homes Project

the remaining capacity is 25.4 million tons, and the anticipated closure date is 2030 (California Department of Resources Recycling and Recovery [CalRecycle] 2019a, 2019b; Republic Services 2019). The Keller Canyon Landfill has an estimated average remaining capacity of 500 tons per day.

Based on a rate of 4 pounds of solid waste per dwelling unit per day, the 182-unit project would generate 728 pounds (0.36 tons) of solid waste per day, or approximately 133 tons per year (CalRecycle 2019c). This estimate is conservative as it does not factor in recycling or waste diversion programs. The less than 0.4 ton of solid waste generated daily by the project would represent less than 0.02 percent of the available surplus capacity of the Keller Canyon Landfill. The City is required to meet the statewide waste diversion goal of 50 percent set by AB 939. Project residents would be provided recycling and green waste collection services, which would reduce the amount of solid waste sent to landfills. The proposed project would comply with federal, state, and local statutes and regulations related to solid waste, such as AB 939, the MMC, and the City's recycling program. Impacts related to solid waste and waste facilities would be less than significant. This impact will not be discussed in the EIR.

LESS THAN SIGNIFICANT IMPACT

20) Wildfire				
		Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
	cated in or near state responsibility areas or es, would the project:	lands classifi	ied as very hig	h fire hazard	severity
а.	Substantially impair an adopted emergency response plan or emergency evacuation plan?				•

City of Martinez

Amáre Apartment Homes Project

d. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project expose people or structures to significant risks, including downslopes or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

The proposed project is not in or near a very high fire hazard severity zone or state responsibility area, as the closest is 2.5 miles west of the site (CAL FIRE 2009). No wildfire impact would occur. This impact will not be discussed in the EIR.

NO IMPACT

Mandatory Findings of Significance Less than Significant **Potentially** with Less than Significant Mitigation Significant **Impact** Incorporated **Impact** No Impact Does the project: a. Have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory? b. Have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)? Have environmental effects which will cause substantial adverse effects on

a. Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

human beings, either directly or

indirectly?

As described in Section 4, *Biological Resources*, the proposed project has the potential to impact sensitive species and wetlands. However, the project site is generally surrounded by urban development, and is not part of a substantial wildlife corridor or wildlife area. Therefore, the project would not substantially reduce the habitat of fish and wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, eliminate a plant or animal community, or reduce the number or restrict the range of a rare or endangered plant or animal. In addition, potential direct impacts to biological resources will be addressed in the EIR.

Amáre Apartment Homes Project

As noted under Section 5, *Cultural Resources*, and Section 7, *Geology and Soils*, no historical, archeological, or paleontological resources were identified on site. The project site does not contain important examples of the major periods of California history or prehistory. Therefore, the project would not eliminate these resources. In addition, Mitigation Measures CR-1 requires the implementation of a process for evaluating and, as necessary, avoiding impacts to any resources found during construction. Therefore, impacts to important examples of California history or prehistory would be less than significant with mitigation incorporated.

This impact will not be discussed further in the EIR.

LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED

b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?

The proposed project involves construction on an undeveloped parcel in a developed area of the City. However, the proposed project would develop the site in a manner consistent with surrounding land uses, existing land use and zoning designations, and would be considered infill. Cumulative impacts associated with some of the resource areas have been addressed in the individual resource sections above: Air Quality, Greenhouse Gases, Water Supply, and Solid Waste (CEQA Guidelines Section 15064[h][3]) and would be less than significant. Some of the other resource areas were determined to have no impact in comparison to existing conditions and therefore would not contribute to cumulative impacts, such as Agriculture and Forestry Resources and Mineral Resources. As such, cumulative impacts in these issue areas would also be less than significant (not cumulatively considerable). Other issues (e.g., tribal cultural resources, hazards and hazardous materials) are site-specific, and impacts at one location do not add to impacts at other locations or create additive impacts. Cumulative biological resources or traffic impacts may be potentially significant and further analysis will be included in the EIR.

POTENTIALLY SIGNIFICANT IMPACT

c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

In general, impacts to human beings are associated with air quality, hazards and hazardous materials, and noise impacts. As detailed in analyses for air quality, hazards and hazardous materials, and noise, the proposed project would not result, either directly or indirectly, in substantial adverse hazards related to air quality or hazards and hazardous materials. Direct and indirect impacts related to noise and vibration will be addressed in the EIR.

POTENTIALLY SIGNIFICANT IMPACT

John Muir Parkway Specific Area Plan

33 JOHN MUIR PARKWAY SPECIFIC AREA PLAN

33.1 INTRODUCTION

The John Muir Parkway area, encompassing both incorporated and unincorporated lands, has historically been semi-rural in character. With the completion of Route 4, the high accessibility of the area to the routes 80 and 680 highway corridors, and the availability of vast developable land reserves in the planning area, intensive demand for urban development can be expected. With other districts within the City committed to development within the framework provided by the General Plan, the John Muir Parkway planning area affords the City a unique urban development opportunity, one with recognizable advantages over other portions of the City as well as neighboring cities, which can significantly enhance Martinez and contribute to its tax base.

The John Muir Parkway Specific Area Plan responds to this development opportunity by providing a policy framework to guide development and shape the area's environment. The plan is intended to serve the planning and economic needs of the City and Parkway area over the next 10 years. It advocates a desirable development program which should be achieved within this time frame although current development pressures may conflict. The aim of the plan is to channel more intensive levels of growth into the area and thus expand the City's share of regional growth. To support this aim, high quality development is to be fostered. Thus, the plan sets forth urban design standards by which to ensure a superior level of site amenity and architectural quality in new residential, shopping and work environments. The policies of the plan act as the standard of reference by which to analyze and evaluate proposed development within the planning area and to encourage other development actions. The plan deals with the locations and type of residential, office and commercial, circulation, open space and community facilities uses, the mix and intensity of land use, and identifies basic implementation actions. The boundaries of the planning area are shown in Land Use Map 1.

33.2 MAJOR GOAL

The basic intent of the plan is set forth below:

The intent of the John Muir Parkway Specific Area Plan is to achieve a high quality development program which serves as a link between old and new Martinez, expands housing, work, recreation and social opportunities, provides a sense of community identity and enhances the image of the city.

Major Objectives

The following objectives amplify and describe directions for accomplishing the major goal of the plan.

- 33.21 Achieve an urban development pattern which maximizes use of limited land resources while conserving and enhancing the natural terrain and environmental features.
- 33.22 Achieve a mixed, high density development pattern of physically and functionally integrated residential, commercial, and office land uses to take advantage of the high freeway accessibility.
- 33.23 Achieve a cohesive sense of community identity and positive community social interaction by promoting a well-organized neighborhood development, a common open space system which provides a variety of recreational opportunities serving neighboring and individual residential areas, and development of neighborhood commercial centers which serve social aspects of the community by providing a strong community focus and identity.
- 33.24 Promote a land use pattern which represents the highest and best use of the land, meets economic and planning needs in a timely fashion, and contributes to the tax base rather than adversely competing with the existing commercial base of the City.
- 33.25 Achieve a physical development with architectural and landscape components of high quality, which is skillfully and innovatively designed, and will significantly contribute to the public welfare through improved community appearance, and visual amenity of the City.
- 33.26 Develop substantial areas of high density residential land use within the planning area to improve the city-wide balance of housing types, increase the regional availability of housing at affordable prices within reasonable distances to major work centers, and in general, increase the housing opportunity for a greater number of households desiring to live in Martinez, including opportunities for young singles and marrieds and senior citizens.
- 33.27 Provide for the development of a safe, efficient and convenient circulation pattern without unnecessary disruption of residential neighborhoods. 1/71.

- 33.28 Improve the aesthetic appeal of the entrances to the City of Martinez and insure the high scenic quality of natural and manmade elements viewed with the John Muir parkway Scenic Highway Corridor. 1/71 3/78.
- 33.29 Promote community identification with the City of Martinez and encourage systematic annexation of unincorporated lands with the City's sphere of influence. 1/71.

33.3 LAND USE POLICIES

Based upon the above objectives of the Specific Area Plan, various land use policies relating to the type, location and intensity of development of land uses are set forth in this section and are depicted in Land Use Map 1. Specific policies are given for residential uses, commercial uses including neighborhood commercial centers, open space and community facilities, administrative offices and circulation systems including trailways.

33.31 RESIDENTIAL USE POLICIES:

- 33.311 The majority of housing within the developable reserves of the planning area should be in higher density townhouse and apartment type uses with lower density residential development located within the existing single family areas. The permissible range of residential densities includes: 1-6 dwelling units per gross acre; 7-12 dwelling units per gross acre; 10-18 unites per gross acre and 18-25 units per gross acre as set forth in Table 33.1. Gross acre is determined by the total acreage of the parcel minus the area of all arterial and collector roads.
- 33.312 Lands designated for development in each category are set forth in the Land Use Policy map. To be consistent with a density category, new development shall fall within the designated development range but may exceed the range under bonus provisions of the zoning ordinance.
- 33.313 Areas closest to John Muir Parkway shall bear higher densities in order to maximize the efficiency of circulation. 1/71.
- 33.314 A variety of higher density housing types shall be encouraged having a range of sizes and bedroom composition; a mixture of rental and owner-occupied units should be provided to insure a balanced supply of housing for residents of different socioeconomic and age groups. 1/71 3/78.
- 33.315 Encourage provision of housing for all persons regardless of income, age, race or ethnic background and promote implementation of the goals, objectives and policies of the Housing Element of the General Plan.
- 33.316 All development in the areas designated for residential use shall be required to submit to the procedures of the Planned Development ordinance to insure development which is sensitive to the topographic and natural features of the terrain, proper road layout and building orientation, prevision of on-site recreational and landscape amenities and provide for clustering of building units.
- 33.317 Provisions of the slope density ordinance shall apply to all lands. Exemptions may be permitted on the provisions of the ordinance to allow development on slopes over 40% in grade or for higher density bonuses where innovative structural systems and architectural solutions provide a greater utilization of land resources at higher

intensities of use. These would include "hillside architecture apartment types" which are stepped into a hillside creating a sloped architectural structure which allows for parking and roadway access at intervals along the hillside.

33.318 Acoustic studies may be required for projects proposed to be located on property subject to overflight from aircraft approaching to land at or departing from Buchanan Field Airport.

33.319 When a proposed multiple family residential development is near an existing single family (or lower density multiple family) development, the Planning Commission shall require appropriate transition elements in the approved development plan, such as landscape buffering, building setbacks equal to or larger than those required in adjacent zone district, minimization of grade differences to avoid visual impact and loss of privacy, different types of units which are more compatible with those existing on adjacent property, lower density zoning, assembly of small parcels into one large project for more design flexibility, provision of project access from collector streets rather than existing local residential streets, etc. In addition, all residential developments shall be subdivided into individual units and offered for sale to maximize the opportunity for owner-occupied housing in the area.

TABLE 33.1

RESIDENTIAL USE DENSITIES AS RELATED TO DESIGNATED BUILDING TYPES

Unit Gross Acre	Designated Building Type
0 to 6 units	Single family detached Single family semi-detached Court-house Townhouse
7 to 12 units	Court-house Townhouse Garden apartment
10 to 18 units	Townhouse Garden Apartment Hillside architecture apartment
18 to 25 units	Garden apartment Hillside architecture apartment Medium-rise apartment

33.32 COMMERCIAL LAND USE POLICIES

- 33.320 All commercial developments, their appurtenant buildings and signs shall be designed in keeping with the intent and policies of the Scenic Highways Element.
- 33.321 Two neighborhood shopping centers should be located in the Parkway area to serve the existing shopping needs of adjacent neighborhood as well as new residential development.
- 33.322 Neighborhood commercial centers should be designed also to serve social needs of the community by providing a strong community focus through a well-planned building and site design program, tenant program, provision of amenities, neighborhood communication facilities, and space for group activities, which in total, fosters community interaction and community affairs.
- 33.323 A desirable tenant program for the neighborhood retail center would include: a large grocery store and discount drug type store; mall tenants such as hardware store, liquor store, delicatessen, specialty cheese shops, bakery, etc; restaurants and other food and catering services; retail services such as shoe repair, cleaners, beauty shop, barber shop, etc; and such other specialty and/or variety shopping uses as bookstore and cards, gift shop, sporting goods, active sportswear, etc. The supermarkets as a major anchor should be approximately 32,000 sq. ft.; total size of each center should be approximately a total of 100,000 sq. ft. of gross retail space.

Provision of community commercial recreation facilities in the neighborhood retail center is strongly encouraged.

- 33.324 The provision of space for office uses within neighborhood commercial centers should be encouraged.
- 33.325 One neighborhood commercial center should be located on the north-west corner of Arnold Dr. and Morello Ave.
- 33.326 A hotel/motel and restaurant complex should be located in the commercial use area designated on the hilltop parcel near the northwest intersection of Highway I-680 and Highway 4 to take advantage of the highly visible highway orientation of the site. The hotel/motel facility could range from 100 to 150 rooms. Clustered development on this site should take advantage of the views of the Carquinez Straits, Mount Diablo, the entire Clayton/Ygnacio Valley and the Martinez Hills. One to two dinner restaurants should be included in this complex which are approximately 10,000 sq. ft. or accommodate approximately 120 seats each.

A second hotel/motel and restaurant complex should be encouraged to locate in the vicinity of the Pine street interchange with Highway 4.

33.327 The commercial retail and services uses designated on the southwest and

southeast corner of Arnold Drive and Morello Avenue are appropriate for development of a commercial/recreation type use and thoroughfare commercial activity.

- 33.328 A convenience market-type establishment should be located in other designated commercial space not directly served by the designated neighborhood shopping centers.
- 33.329 All commercial sites must be landscaped and proved adequate off-street parking facilities. 1/71.
- 33.330 Viano Winery and Adjacent Property: Continued viability of the Viano Winery is encouraged. This, regarding property adjacent to the existing winery a mixed use designation providing for either winery-related commercial land use or a residential land use is appropriate for such property.

33.33 ADMINISTRATIVE AND PROFESSIONAL OFFICE USE POLICIES:

- 33.331 Office space should be provided in sites designated for Professional/Administrative Office in the Land Use Policy Map as well as on an integrated basis in the neighborhood shopping centers or integrated in any of the other commercial use areas. Where professional/administrative office use is designated, office use character shall predominate.
- 33.332 Developments shall achieve compatibility with the natural landforms and adjacent residential environments by a) building predominantly to the terrain and/or b) by means of creative, man-made grading approaches that respect the basic landforms.
- 33.333 Designated office space areas in the vicinity of the Veterans' Administration Hospital and Kaiser Hospital shall encourage medical-related tenant use.
- 33.334 Office developments should be designed to be compatible with off-site uses by mitigating potential adverse impacts, sharing landscape amenities with adjacent commercial and residential uses and should be physically integrated by roadways, trailways and landscape features.
- 33.335 High-density residential development shall be a permitted use within appropriate sites designated for professional/administrative office land use.

33.34 OPEN SPACE AND COMMUNITY FACILITIES USE POLICIES:

- 33.341 Open Space designations shown in the Land Use Policy Map includes:
 - A. Permanent Open Space land which is intended to carry out the policies and aims of the Open Space and Conservation Element, provide a common open space system to serve neighborhood recreation needs, protect natural features and visual amenities within the planning area; and

- B. Buffer and Trailway Open Space land which is intended to provide adequate visual and acoustic buffer, landscape amenity and a functional, well integrated trail system for walking, hiking, bicycle and equestrian use within the planning area and as a means of linking the planning area to adjacent neighborhoods, shopping and work areas.
- 33.342 Areas designated in permanent open space include the Viano Vineyards Agricultural Preserve lands, * the skyline ridge top over 250' elevation and adjacent hillsides as designated at the eastern gateway above Pacheco Boulevard and Arnold Drive, the drainage draw west of Morello Avenue which is designated for conservation and open space purposes, the north west trending hills in the western portion of the planning area, other hill forms as designated, the large draw to the south of the railroad tracks in the vicinity of the Martinez Reservoir, the ridgetop over 275' in elevation and adjacent hillsides as designated, at the western gateway and the east-west trending drainage draw easterly of the railroad and northerly of Arnold Drive. (* But see Section 33.348)
- 33.343 Buffer and trailway open space designations are generally adjacent to the railroad to provide buffer for new development and between Arnold Drive and the freeway, to provide adequate landscaping, visual improvement and acoustical buffer from the freeway. Additional areas throughout are also designated to provide for roadside landscape amenity and trailways interior to parcels to connect residential areas to schools, shopping, and work places. Buffer and trailway open spaces should be from 15-50 feet in width and larger where they enscribe existing hillforms.

Regarding the buffer lands at the northeast and southeast corners of the intersection of Arnold Drive and Howe Road, retail and services commercial land use is not necessarily precluded on these sites by the buffer designation. Appropriate commercial development proposals to be considered for these sites will provide adequate visual and acoustic buffering and roadside landscape amenity as part of the project design.

- 33.344 Additional on-site, common open space shall be provided within new development areas for the purpose of providing on site recreational and landscape amenity, conserving or enhancing vegetational features, accommodating natural drainage flows and conserving hillform.
- 33.345 In additional to the above open space and recreation area, three neighborhood parks should be developed (as shown in the land use policy map) which are a minimum size of 5 acres apiece and which include active recreational facilities such as children's equipment play area, field play areas for young children, older children and adult field sport activities.
- 33.346 In a portion of the planning area lying within the Martinez Unified School District, expansion of facilities at existing elementary schools, John Muir School and Morello School should suffice to handle new student enrollments.
- 33.347 Riding and hiking trails shall be established in the planning area. 1/71.

Implementation of the California Riding and Hiking Trail shall include provisions for access to ridge tops and open space areas adjacent to established trail easements to improve the trailway system. Trail dedications and adequate connections for the regional canal trailway connecting to the City or Concord should be provided.

33.348 Williamson Act Termination. Upon termination of the Williamson Act Agricultural Preserve on the Viano vineyard lands non-open space land use designations will be considered for the property working towards a mixture of open space and residential land uses consistent with the City's Open Space, Conservation and Hillside Development policies.

33.35 CIRCULATION USE POLICY:

- 33.351 Roadway improvements within the John Muir parkway Planning Area, intended to implement, modify and supersede the more general circulation policies of the General Plan and provide for new circulation needs, are set forth in the Circulation Policy Map, Figure F 33.2. Specified roadways include: Six lane freeway with scenic highway corridor, four lanes with parking, four lanes with median and with parking, two lanes with parking, interchanges, and multi-use trailway.
- 33.352 John Muir Parkway is a major east-west circulation element within the planning area and is a designated Scenic Highway visual impact zone is designated in the plan to indicate those lands which are visually related to the highway corridor and wherein careful attention to the visual impact of new development should be addressed in the design review process.
- 33.353 Four major arterials are identified to serve the planning area, each having four travel lanes; these include the Center Avenue extension, Howe Road, and Pacheco Boulevard. The Center Avenue extension shall be four lanes with parking and with a landscaped median. Morello Avenue from the highway interchange shall have a landscaped median to approximately 1,000 feet north of the Arnold Drive intersection.
- 33.354 Collector streets with two travel lanes with or without parking lanes shall be developed as indicated in the Circulation Policy Map.

33.4 <u>DESIGN REVIEW POLICIES</u> Design review policies and standards are set forth in this section as an essential element in the implementation of desired urban development. Specific Project Review Criteria are as follows:

JOHN MUIR PARKWAY SPECIFIC AREA PLAN - DESIGN REVIEW GUIDELINES - 1985

- 1.00 <u>ENVIRONMENTAL IMPACT AND UTILIZATION OF LAND RESOURCES:</u> Criteria to assure that environment principles of development are adhered to and impact considerations provided for are set forth below:
 - 1.01 Conserve and enhance hillform where topography has been left in an essentially natural state or visually improved hillform by architectural, landscape, and earthwork improvements where topographic form has been substantially altered or scarred by grading or past use.
 - 1.02 Grading and alteration of landform should be minimal; and the skyline ridges indicated in the Open Space and Conservation Element of the General Plan should be retained.
 - Major natural drainageways, riparian vegetation, and other existing treeforms should be retained and visually enhanced through appropriate landscaping and integration of park trail systems and other common open space uses. Incorporation of impoundments or similar water features as compatible to this zone is appropriate to serve drainage and landscape amenity purposes.
 - 1.04 Development should maximize and utilize long and short views of major open space features such as mount Diablo, and Carquinez Straits, and local hills.
 - 1.05 Development should mitigate uncomfortable heat gain from developed building and paving surfaces by modulating the amount of parking area and integrating islands of landscaping and trees to permit shading of asphalt surfaces while permitting cooling wind flow across the paved area.
 - 1.06 Development should not adversely affect adjacent land uses.
 - 1.07 Provide adequate on-site buffers for noise generate by the freeway especially through retention of existing hillforms and consider off-site impacts and mitigations of noise impacts generated by the project.
- 2.00 <u>URBAN DESIGN QUALITY:</u> Criteria to promote a high quality of urban design are set forth below to provide guidelines for reviewing commercial center project proposals and residential proposals. Due to the wide variation of project types for office land uses and other land use types recommended in the Land Use Development Feasibility Study, criteria for these are not provided at this time.
- 2.10 Overall Urban Design Objective. Proposed development shall achieve a group of facilities which will be well related to one another, serve their land use purposes well and promote a functional and physical interplay between component uses. When taken together, the facilities will result in a well composed urban design with consideration given to environmental features of the site and its proper layout, the provision of suitable on-site amenities, and the height, arrangement, texture, material, color, and appurtenances of the structures and the relation of these factors to other facilities in the immediate area and the relation of the development to the total setting as seen from key points in the surrounding area.

- 2.20 <u>Commercial Shopping Center Standards.</u> The following criteria shall apply to the design of commercial shopping centers.
 - 2.21 Site Layout. Building placement and site layout of the project must provide for a grouping of retail spaces which promotes the greatest merchandising interplay between individual tenants and facilitates their convenience, comfort, and use by shoppers.
 - 2.211 The layout should minimize walking distances between parking areas and individual stores and facilitate direct, safe, and easy access to commercial frontages.
 - 2.212 Major anchor tenants must be separated in their sitting and linked by spaces for general merchandise, other retail, commercial services, and similar tenant uses in an arrangement which groups facilities around a common court or plaza.
 - 2.213 A public space and use area, central and accessible to the entire building complex, shall be provided which is accessible to all uses and provides landscaping, sitting areas and other amenities for shoppers. Orientation to sun and building shadows should be considered in the design of plaza areas.
 - 2.214 Provision of space or facility for a public use such as a community theater, place for group assembly, commercial recreation facilities or family-oriented use such as a restaurant is strongly encouraged.
 - 2.22 <u>Circulation Pattern.</u> A rational circulation system should be provided which serves customer convenience, comfort, and safety, and differentiates between the separate movement and operation requirements for customer vehicle circulation, goods delivery circulation, and pedestrian movement.
 - 2.221 The location of entrances to the shopping center should be clearly articulated and identifiable from the roadway.
 - 2.222 Access and egress points should be spaced at sufficient distances from intersections to provide adequate stacking distance and facilitate turning movements without impairing off-site traffic circulation.
 - 2.223 Vehicular circulation should provide safe and convenient access to all commercial frontages, and distinct curbside drop-off and pick-up areas immediate to establishments.
 - 2.224 A safe system of pedestrian circulation should protect a pedestrian from conflict with vehicular movement, should be visually articulated, and where appropriate provide for weather protection.
 - 2.225 Provisions should be made for bicycle ways and facilities for parking bicycles.
 - 2.226 Provisions should be made for adequate goods servicing access and goods loading zones which minimize conflicts with other movement systems.
 - 2.227 A parking guideline of one space for every 200-250 square feet of net commercial floor area should be sought; however, where office space of 20% to 30% is integrated into the commercial center, no additional parking space will be

required.

- 2.228 Parking under structure is desirable to allow for sufficient landscape in the parking area, and achievement of desirable parking spaces. (Bonus criteria if elected.)
- 2.23 <u>Architectural Character.</u> The proposed buildings and facilities should provide a unified architectural character, theme, and composition which is attractive and provides an atmosphere of amenity, comfort, and convenience.
 - 2.231 The grouping, massing, scale, configuration, and detailing of architectural components should provide a varied yet unified appearance.
 - 2.232 Substantial landscaping should be provided to enrich the appearance of the facility both from on-site and off-site vantage points as well as to reduce heat gain of paved surfaces.
 - 2.233 Roofscape detailing shall be articulated to create a pleasing, unified scale and appearance.
 - 2.234 Control of sign type and placement shall be provided to improve legibility of signage and create a unified project character.
- 2.30 <u>Multi-Unit Residential Project Design Standards.</u> The following criteria may apply to all residential projects but in particular, relate to those which are higher density in character.
 - 2.31 Site Layout. Building placement and site layout shall avoid an appearance of overcrowding, create a sense of hierarchal organization from private areas to neighborhood areas to protect individual privacy while promoting social contact and neighboring, and provide for a satisfactory physical and functional integration of buildings, open areas, neighborhood use areas, and vehicular and pedestrian movement systems and parking areas.
 - 2.311 The site layout should minimize walking distances between carport areas and individual residential units but should provide for satisfactory separation of vehicular areas and residences.
 - 2.312 A variety of recreational open space opportunities and common areas within the residential environment should be provided and organized in a hierarchal manner. A wide range of on-site recreational activities should be provided which is attractively landscaped and serves as an organizing focus for the arrangement of buildings and circulation patterns. Orientation to sun and building shadows should be considered in the design of open space use areas.
 - 2.313 A pleasing visual and functional relationship between adjacent land uses should be provided which mitigates potential adverse affects of neighboring uses, promotes privacy for the residential environment, yet avoids potentially adverse off-site impacts.
 - 2.314 Acoustical and visual privacy of individual residences should be stressed in the sitting, layout, and treatment of the site design and satisfactory buffers between active community outdoor use areas, vehicular areas and private dwellings should be provided.
 - 2.315 Although the distance between building placements should vary to promote a more pleasing site layout, distance between buildings in general

should not be closer than twice the height of buildings and in no case should be less that the height itself. Closer distances may be acceptable for non-windowed walls.

- 2.316 The site layout should maximize valuable views from the project area to major open space features of the subarea and region.
- 2.32 Residential Circulation Pattern. An on-site circulation pattern should be provided which avoids conflicts between vehicular areas and pedestrian movement and safety requirements, is visually subordinate in the overall residential environment and provides for safe, convenient, and pleasant access and egress from the project.
 - 2.321 Access and egress points should be located to provide for sufficient site distance free from conflicts with turning movements and parking operations and should provide attractive and clearly legible entranceways. Pleasant, varied vehicular ways within the project area should be provided.
 - 2.322 A significant portion of on-site parking should be provided under structure to provide for sufficient on-site open space area and prevent an appearance of overcrowding and dominance of the site plan by paved vehicular areas.
 - 2.323 The pedestrian circulation system should be well articulated, provide for pedestrian safety where conflicts with vehicular movements are present, and where appropriate should provide for weather protection.
 - 2.324 Provisions should be made for bicycle ways and facilities for parking bicycles.
 - 2.325 Parking for residences should be designed to protect the privacy of the residents and prevent intrusion by noise and light of autos.
- 2.33 <u>Architectural Character.</u> The proposed buildings and facilities should be of high architectural quality and character, provide a sense of varied configuration, massing, grouping and scale which avoids a monotonous appearance, and achieves a highly desirable residential atmosphere.
 - 2.331 The placement, configuration, height, and scale of building masses should achieve an interplay and variety in the setting; roofscape, architectural detailing, and use of materials and color should contribute positively to the overall appearance of the development.
 - 2.332 Substantial landscaping should be provided to enrich the appearance of the development from both on-site and off-site vantage points as well as to promote the privacy of individual residences and control heat gain and heat loss and promote climate control.
 - 2.333 An unattractive graphic sign system should be utilized in a unified manner throughout the site; on-site lighting should contribute to the aesthetic appearance of the project and should be placed to avoid glare in private living areas.

33.5 <u>BUCHANAN FIELD AIRPORT PLANNING AREA</u> Proposed developments within the structural height limits zone of the Buchanan Field Airport Planning Area shall be designed in keeping with the intent and policies of the Airport Plan. Clustering of units to keep residential densities at locations of terrain penetration at the lowest reasonable levels should be accomplished. Projects within the zone shall be referred to the Airport Land Use Commission for review and recommendation.

33.6 <u>IMPLEMENTATION POLICIES</u>

- 33.61 The City should initiate an active program of annexation of unincorporated areas within the sphere of influence.
- 33.62 In areas not readily available for City annexation, the City should seek continued cooperation with the County Planning Department and County Planning Commission to assure the implementation of its planning policies within the City's sphere of influence.
- 33.63 The disposition of surplus school lands owned by the Martinez Unified School District should be considered in a cooperative planning program between the City and the School district to achieve the purposes of the Specific Area Plan.
- 33.64 The City should actively promote development of the designated hotel/motel restaurant complex through a public relations and information program involving the chamber of Commerce and other suitable interest groups of the City.
- 33.65 A vigorous design review program utilizing improved design review criteria, project review procedures including competitive review of projects, numerical point rating techniques and similar elements should be utilized to achieve the highest level of project design.
- 33.66 Public open space lands and easements in addition to those already designated in the land use plan should be determined as a result of detailed design review and visual assessments at the time of project applications.
- 33.67 The Zoning Ordinance shall be modified to provide for a planned Unit Development (PUD) Residential Zoning District designation along with other modifications as necessary to implement the policies and provisions of this plan.

33.7 JOHN MUIR PARKWAY SPECIFIC AREA PLAN - 1985 UPDATE

I. INTRODUCTION AND SUMMARY

This document [John Muir Parkway Specific Area Plan 1985 Update Report, which includes all Figures, Tables and Appendices herein referenced] serves as a comprehensive update to the original 1978 John Muir Parkway Specific Area Plan. The major goals, policies and objectives of that Plan remain unchanged. The specific recommendations contained in this report serve to implement those broad policies through a specific set of housing policies, employment policies and circulation system policies, coupled with a number of programs designed to insure that our municipal and special district services are able to keep pace with the anticipated community growth.

Contained within the John Muir Parkway Planning Area are some 626 acres of undeveloped or underdeveloped land. Some of this land is currently under agricultural preserve, while a number of acres are very steep or visually sensitive, and therefore considered undevelopable. Still other properties within this planning area fall outside the present City boundary line and are therefore not subject to immediate land use policy control by the City of Martinez. By and large the policies on land use contained within this document, however, will serve as an incentive for these properties to annex to the city in order to receive the benefits of the land use designations contained in the Plan and in order to receive municipal services.

It is important to note that this plan represents an expectation of planned, moderate growth over a 15-year period. Unlike traditionally long-range general plan documents, the John Muir Parkway Specific Area Plan is intended to serve as a mid-range planning tool which will provide a significant level of policy guidance for all kinds of projects and necessary infrastructure.

A major thrust of the land use recommendations contained herein is the matching of jobs and housing production in both a qualitative and quantitative sense. The community's success in setting a course for stable, balanced growth will be predicated upon the expansion of key servicing infrastructure. In addition to providing adequate capacity in our water, street and sewer systems, the community must focus its energy and resources to bring about expanded recreational and open space amenities and other non-traditional public and private services to ensure a high quality of life to area residents and growing businesses.

II. HOUSING NEEDS AND POLICIES

Up until approximately 1970, the vast majority of residential development in this community was of the single family detached type. During the following decade, the community experienced a substantial growth in condominium and apartment development, much of it focused along the Highway 4 corridor. (See 1985 Housing Element Update). Between 1980 and 1985. Martinez has experienced a more balanced proportion of both single family attached, single family detached and multi-family construction. Again, the John Muir parkway Planning Area has been the focus of substantial numbers of additional housing units of all types. The essential qualities of remaining vacant lands within this Planning area are then (1) ease of access to both local employment and major transportation corridors leading to employment centers elsewhere and the Bay area; (2) their proximity to shopping and recreational amenities; and (3) the unique Martinez setting with its rolling hills, panoramic views and historic downtown which set them aside from the Diablo Valley. In considering a direction for housing growth within this area, it is of ultimate importance to consider as resources, the overall supply of suitable remaining vacant land, the sizes of remaining vacant parcels and their ability for assemblage and the ability of the City and special districts to provide essential services. Guiding our use of these resources are the relationship of these vacant properties to existing employment and housing projects, and other facilities which may influence to quality of life, the specific topographic setting and finally the economic climate of the marketplace.

Figure 2 (a) represents the boundaries of the John Muir Parkway Specific Plan area (as well as the various special purpose districts providing services to the area), the City limit line and the pre-existing land use policy for the area. Figure 3(b) is the summary of amended land uses for this same area. As indicated in Table 1, the greatest single existing allocation of land use within this area is to open space, with the next single largest allocation being to low density single family residential land uses (0-6 du/ac). Only 6% of the total vacant land supply within the John Muir Parkway area is currently devoted to moderate and higher density residential uses (13-25 du/ac). The amended land use designations shown in Figure 3 (b) reflect an approximate 26% reduction in the supply of land for very low density single residential uses and a 31% decrease in land resources devoted to low density residential uses (7-12 du/ac). Correspondingly, the amended plan also represents an increase of 27 and 31 acres, respectively, for moderate and higher density residential uses (13-18 and 19-25 du/ac). The amended land use policies for housing do not alter the supply of remaining open space uses within the John Muir Parkway Planning Area. Moreover, as shown in Figure 3(b) a new park site is identified within this area to meet growing needs and actually improve overall recreational opportunities for existing residents.

Whereas, upon consumption of all remaining vacant land the pre-existing General Plan would produce an additional 2,775 dwelling units, the amended land use policies would increase this number to 3,246 dwelling units over the same 15 year period. This growth in housing units, as analyzed with respect to employment growth and household population size projections, corresponds to an increase of between roughly 6,100 additional residents (under the pre-existing General Plan) vs. 6,500 residents under the amended land use policies. This Plan, therefore, represents the opportunity to accommodate 7% more future residents than the old John Muir Parkway Specific Area Plan.

Although no residential densities are reduced in the new plan, the specific density increases have been earmarked for locations capable of accommodating moderate to higher densities without impact on adjoining neighborhoods. Generally speaking, larger properties along collector streets have been considered more suitable for modest increases in density than smaller properties located amidst developed neighborhoods on local streets. Particular attention should be called to the following areas where the greatest potential for additional housing opportunity has been identified:

- 1. <u>Howe Road.</u> To the north and west of Howe Road in what is now an unincorporated area lie several underdeveloped properties suitable for development as housing. Through the extension of Veale Avenue to Howe Road, an independent means of access is at once provided both to a potential housing project on the east and a potential new neighborhood park on the west (presently owned by the Mt. View Improvement Association).
- 2. Morello Avenue south of Midhill Road. The amended plan extends to the higher density land use designation north from Maywood Lane to the intersection of Midhill Road and Morello Avenue. Economically dependent on the assemblage of several smaller properties in this area, long-range land use expectations are that high quality condominium or townhouse projects similar to those presently in existence along Morello Avenue and Arnold Drive could be build within this area.
- 3. Morello Avenue north. Both to the east and west of Morello Avenue north of Midhill Road are a number of vacant or underdeveloped properties with substantial acreage. Surrounding these properties, however, are predominantly single family detached land uses. Thus, while potential for additional modest increases in density present themselves, these increases must be limited in order to assure a high degree of neighborhood compatibility. Additionally, it is important that an independent means of access from those properties on the west side of Morello be obtained to the collector street itself in order to avoid dispersing of heavy traffic loads down Palisade Drive or Marie Avenue. The maximum density approved for the area to

the west of Morello is 6 dwelling units per gross acre. The smaller site on the east side of Morello Avenue is approved for future development within the lower range of a 7-12 du/ac classification.

- 4. Arnold Drive at Fig Tree Lane. Pre-existing use policy calls for higher density land uses on the west side of Fig Tree Lane, with low density residential land uses on the east side of the street. Although presently divided into piece-meal ownership, a significant supply of vacant land remains available on the east side of Fig Tree Lane, and is suitable for a similar higher density designation. It is anticipated that this property could only be developed for such purposes if the various properties were assembled for consideration as a single or possibly two projects.
- 5. Arnold Drive at Milano Way. With exceptions for future annexation, the amended plan addresses a change from very low to moderate and low residential densities extending northwest away from Arnold Drive (behind an office use fronting Arnold Drive itself). These properties represent an excellent opportunity for single family development of a high quality nature, close to major traffic and employment centers. This includes the larger parcel located on Arnold Drive, easterly of Starflower Drive.
- 6. Pacheco Blvd. The amended plan retains lower density residential land uses on the west side of Pacheco Blvd., south of the railroad right-of-way. A small increase in the boundaries of this 7-12 du/ac land use area is proposed immediately southwest of the Pacheco Blvd./ATSF crossing, and corresponds to a verified available building area below the adjoining ridge line.

As further discussed in the employment section of this document, the moderate increases in residential densities provided are designed to produce an overall range of housing opportunities commensurate with the anticipated growth in employment in our community over the next 15 years. Considered in relationship to the City as a whole, the existing Parkway Plan would accommodate 55% of the City's total residential growth over the next 15 years. Despite the density increases planned, the amended Plan would represent an increase of less than 6% in the Parkway's share of total City residential growth. More importantly, as shown in Tables 8-11, the moderate increases in housing opportunities provided are necessary in light of a projected employment growth of 28,000 jobs over the next 15 years (see Section III for details).

III. EMPLOYMENT NEEDS AND POLICIES

Table 1 includes a summary of total vacant acreage devoted to various non-residential uses, along with projected development yields and occupancies. Although the total acres of land devoted to various non-residential uses in the amended General Plan are substantially the same as in the pre-existing General Plan, a major shift is represented by the allocation of land specifically to office and research/development uses, as opposed to service commercial and light industrial uses. When analyzed in relationship to local community needs, as well as regional market place trends, the clear indication is that future demand will remain strong for office and light manufacturing floor space, in contrast to light industrial or service commercial land. A corresponding change in land use policy would concurrently produce greater numbers of employees (as represented in Table 1) along with a reduction in truck traffic and an increase in the numbers of enclosed, well designed and landscaped employment centers. Specifically, the land use changes shown in Figure 3(b) correspond to a total projected employment increase of 800 jobs over a 15-year period. As a result, it is anticipated then that the John Muir Parkway area would product 59% of all jobs created within the community over the same 15-year period (matching housing production – See Section II).

Areas particularly noteworthy in terms of changes in non-residential land use policy including the following:

- 1. Howe Road. With the success of the business park now underway at the corner of Vista Way and Howe Road, and that expected to break ground this summer immediately to the west, and in light of the new housing densities approved for those properties north and westerly of Howe Road, a Research and Development Land Use designation is planned for the remaining portion of the Thomason and Armour Oil properties located adjoining the City limit line on Howe Road. These properties are currently designated for Light Industrial or Service Commercial uses. The new R&D designation would provide better compatibility with neighboring housing uses and improve the image of the City, while adding to the potential tax base and providing office or engineering related employment.
- 2. Arnold Drive easterly of Milano Way. To the south of Arnold Drive in this area the pre-existing Parkway Plan calls for low density residential land uses. In light of the recent approvals for office projects farther to the west and the substantial increases in traffic anticipated from Highway 4 in the future, an office land use designation has been applied to these properties. The commercial designation previously applied to the Crest Office park site has also been changed to an office designation, consistent with the major project as recently approved.
- 3. <u>Arnold Drive westerly of Milano Way.</u> Extending westerly from Milano Way to (but not including) those properties fronting on Fig Tree Lane, all lots which front onto Arnold Drive are to be developed for office uses. This classification of use is intended to buffer adjoining housing uses from traffic noise.
- 4. Arnold at Old Orchard. A special combining designation of R&D/C (Research and Development and/or Commercial) has been applied to the 20+ acres of vacant land northeasterly of Old Orchard and Arnold Dive. Commercial uses should be allowed only subject to careful scrutiny and through site/architectural planning, and upon issuance of a Conditional Use Permit (as required through specific zoning). Additionally, commercial use of this site should be limited to a floor area ratio of .27, in order to avoid excessive traffic generation.

Research and Development uses will continue to be encouraged; however, the City shall consider commercial land uses if properly planned and demonstrated to be compatible with existing and planned adjoining uses.

Pacheco Blvd. Corridor. With the anticipated future redesign and reconstruction of the Highway 4/I-680 interchange providing a freeway-to-freeway high speed connection, it is anticipated that the prominence of Pacheco Blvd. as a gateway to the City of Martinez will be expanded. Coupled with the City's existing land use policy calling for housing of a low-density nature on the westerly side of Pacheco Blvd., the amended Parkway Plan now designates research and development uses between Pacheco Blvd. and I-680, as well as to a smaller site on the west side of Pacheco Blvd. adjoining Arnold Drive. The R&D designation would produce a higher number of enclosed, well landscaped facilities of a professional or industrial character, as opposed to the open storage yards and commercial service facilities beginning to emerge in this area. The R&D land use classification has also been expanded to include opportunities for specific commercial uses where appropriate to serve the needs of an expanding residential and office population. As implemented through zoning measures, this land use reform would accommodate small retail centers on a conditional use basis to serve localized needs.

A significant aspect of new development within this area is the pre-planned proximity of residential and employment uses. In order to establish a preserve an attractive, desirable environment within which both uses may thrive, it is essential that new developments incorporate sensitive site planning and architectural treatments to form functional

"buffers" between those activities which could otherwise present compatibility problems. Such "buffers" may need to address issues of noise, view preservation, visual continuity, drainage, traffic circulation and protection from hazardous or otherwise potentially annoying attributes of individual land uses on a case-by-cast basis. It shall be the responsibility of developers to incorporate such buffer treatments into project plans, and for the City to review and approve same based on localized need.

IV. INFRASTRUCTURE ANALYSIS

Tables 1-7 and Fig. 4 reflect important information relative to the demand of both residential and non-residential growth within the planning area on the City's water system, the sanitary districts and the school districts. This data was also used by the City's sub-consultants to generated specific information relative to impacts on water treatment, storage, distribution and pumping facilities, as well as our traffic carrying systems.

The overall conclusion of these studies is to show that the growth projected from the proposed General Plan land use policies can be accommodated by our infrastructure network, provided that certain critical improvements are planned, financed and executed on schedule.

Following is a specific analysis of each of these infrastructure systems.

Traffic. Appendix B includes a summary report from the City's consultant on traffic a. engineering relative to safety and capacity issues associated with development in the John Muir Parkway area over the next 15 years. Projected traffic increases have been calculated and are presented, both with respect to implementation of the existing General Plan (referred to as the base case situation) and maximum development under the proposed new Parkway Plan. Our methodology for analyzing traffic impacts was to begin with a very specific analysis of the maximum development potential for individual properties throughout the planning area under both the base case and proposed General Plan alternatives. Using a computer modeling system, the effects of added traffic were examined to determine where street widening, median island or signal lights might be necessary, as well as where new street extensions or significant street alternations were called for in order to address traffic safety or neighborhood impact issues. Figure 1, Appendix B represents the existing traffic network, showing current average daily trip generation. Figures 2 and 3, Appendix B respectively represent future traffic levels under the base case and proposed General Plan scenarios. Again, it is important to note that both Figures 2 and 3, Appendix B represent maximum development yield under the prevalent land use policies. This therefore, represents a worse case traffic scenario.

As discussed in the previous Housing and Employment sections, one major objective of this planning program has been the balancing of jobs and housing to produce greater employment for local residents, and therefore an enhanced quality of life. Consistent with this objective, average daily traffic levels under the proposed General Plan would exceed those under the existing plan by less than 6%. (See Table 1, Appendix B).

An analysis of future traffic distribution, in conjunction with the existing traffic loading and patterns has produced an analysis of traffic signal warrants as represented in Table 4 in Appendix B. Consistent with the total average daily trip generation projections, the need for new traffic signals under the proposed General Plan is identical to that under the existing General Plan. New signals will be needed at least nine intersections throughout the planning area based on standard signal warrant criteria.

Modifications to the major arterial streets will also be necessary in order to accommodate the existing traffic under either scenario at build-out. Specifically, median and intersection improvements will be necessary to both Arnold Drive and Pacheco Boulevard in order to accommodate traffic volumes while preserving and enhancing traffic safety.

Noteworthy is the conclusion that both Arnold Drive and Pacheco Boulevard can easily accommodate projected worse case traffic loads without widening to four, except at intersections. Morello Avenue, as previously specified under the City and County General Plans will ultimately be widened to four lanes throughout the planning area.

Some of the necessary improvements relate directly to the needs of adjoining future private developments, and may therefore be financed and constructed as part of those future projects. A majority of these improvements, however, focus on carrying traffic from on area to another, and will therefore need to be publicly financed and scheduled in such a manner as to maintain levels of service over time in the face of continuing growth.

Included in Appendix C is a break down of projected costs for necessary transportation system improvements on a localized basis. Estimates including necessary improvements to the Morello Avenue corridor, the Howe Road corridor, and the Pacheco Boulevard corridor. Again, necessary improvements to Arnold Drive between these three north/south corridors is to be addressed on a project specific-basis, with individual developers providing incremental improvements. The total projected cost for essential improvements under either the existing or the proposed General Plan are slightly in excess of one million dollars.

b. Water System: The City's now several year old Water System Master Plan as prepared by John Corollo Associates has been analyzed with respect to new development Citywide through the year 2000 (see Appendix D). Detailed information as provided in Table 1 through 3, [Appendix D] and Figures 2, 3, and 5 [Appendix D] were analyzed by the firm of Black and Veatch to determine potential future capacity and servicing problems. Examined were the following: (a) the capacity of the City's water purification plant; (b) the total volume of storage at various zone levels; and (c) the City's pumping stations and transmission lines.

The water purification plant operates under theoretical 24-hour treatment capacity of 10,000,000 gallons. Maximum actual demand within the last two years has peaked at 8.3 mgd (representing a 24-hour period). It is likely that the remaining 1.7 mgd capacity can be expanded by running the plant at a higher rate (pushing more water through the filters). Experiments will be conducted over the next two months to determine the potential for overall plant capacity expansion using this technique. The basic plant capacity can also be expanded by 2 mgd through the replacement of existing filters with higher efficiency filters. The filter replacement project would take approximately one to complete (making conversion on one filter at a time during winter months), at a cost of roughly \$600,000.

As shown in Table 1 [Appendix D], the total anticipated increase in treated water demand under the proposed General Plan is 2.8 mgd, and 2.3 mgd under the existing General Plan. It is our conclusion, therefore, that the City will need to plan for replacement of water treatment plan filters within the next five years, in order to assure an adequate supply of treated water to the community.

The foregoing projections and estimates correspond to demand from both residential and non-residential customers, including irrigation water but excluding <u>process</u> water. Those factories which utilize water in the production of goods (for example canneries and certain kinds of electronic component production) utilize vastly greater quantities of water than to non-process water users. Current Zoning Ordinance provisions, under the light industry, research and development and service commercial designations do not exclude process water users. Thus, were such users to locate on vacant properties within the John Muir Parkway area, it is likely that the City would find itself with inadequate long-term plant capacity (it should be noted that certain electronic manufacturing uses can consume in excess of 1 mgd in a single plant). Two options present themselves for

dealing with this potential:

- Exclude process water users through a series of Zoning Ordinance amendments.
 This alternative would assure adequate treated water capacity for all other kinds of uses.
- Plan for an ultimate further expansion in treated water capacity, through retrofitting the old (new inoperative) water treatment plant, coupled with a special surcharge on process water users designed to offset capital improvement costs to the City. Bringing the old plant on line could cost between one and two million dollars, but could provide up to an additional 4 mgd capacity. This extra capacity could be reserved for process water users under a special development impact fee structure, where special capacity is allocated according to need and benefits to the community.

The City's storage system consists of a series of reservoirs at different elevation levels, with total capacity sufficient to provide water to all customers on a continuous basis. Necessary to serve already approved development under the City's existing General Plan is a 1.5 mg Hidden Valley Zone II Reservoir budgeted and projected for construction later this year, this new reservoir will add sufficient capacity to the City's storage system to handle a majority of anticipated growth. Under the year 2000 existing General Plan situation, no additional storage facilities would be necessary, whereas under the proposed General Plan and additional half million gallon of storage would be necessary toward the end of the 15 year period. This additional .5 mgd capacity could be added under a variety of different options. It does not take into consideration water needs from process water users as discussed above. As with the treatment plant capacity, process water customers would need to contribute additional monies on a special assessment basis to pay for supplemental storage capacity.

The City's transmission and pumping systems are essentially adequate to serve community needs through the year 2000 under either General Plan scenario. Minor alterations to a number of facilities would be necessary, but may be provided on an incremental basis through the collection of fees from individual projects.

A complete analysis of the water system impacts and needed improvements appears in Appendix D.

C. <u>Sanitary Sewerage:</u> The Mt. View Sanitary District maintains the sanitary sewerage system serving the John Muir Parkway Specific Plan area as well as incorporated and unincorporated areas, which include Vine Hill, Arthur Road, Blum Road and the Veterans' Administration Hospital. The total potential Mt. View Sanitary District service area is approximately 4,000 acres of which 525 acres are within the John Muir Parkway Specific Plan area. Expected wastewater flows from the John Muir Parkway account for approximately one-third of the total District flow at full build-out.

The existing sanitary sewerage facilities consist of a system of collecting sewers and four pumping stations which convey the sewage to the district's treatment plant located off Arthur Road. Some of the major collecting sewers and pumping stations will need to be enlarged as the District approaches full build out.

The existing treatment plant provides secondary treatment with effluent disinfection and has a rated capacity of 1.6 million gallons per day (mgd). The existing wastewater flow is around 1.0 mgd. Under a 1968 Long Range Plan, the plant was to be expanded to a capacity of 3.2 mgd as the District reaches its full build-out. Treated effluent is discharged through a marsh system leading to Carquinez Strait.

The District has a system of connection charges designed to accumulate funds to make improvements to the sewer system and treatment plan as capacity limitations approach. In anticipation of the expected rapid growth and the need to provide additional capacity in the future, the District has commissioned a study of the wastewater collection and treatment facilities to identify and prioritize infrastructure improvements needs. As a part of this study, the level of connection charges will be reviewed in respect to providing the appropriate level of funding for infrastructure improvements as they become necessary.

The amount of additional development anticipated through the proposed General Plan Amendments will not have a significant impact of the services required for full build-out of the District.

- d. <u>Drainage:</u> Fees are currently collected by both the City and the Flood Control agency within certain watersheds on the basis of impervious surface added. These fees are used for purposes of downstream storm drain improvements including, but not limited to pipes, detention basins, outfall structures, and other capital improvements. While no significant impact would be added through the proposed General Plan amendments, collectively all the anticipated development from the John Muir Parkway area (existing or proposed General Plan) must be dealt with in terms of necessary downstream improvements. This Plan therefore recognizes the need to collect a uniform drainage mitigation fee for purposes of completing eventual flood control capital improvements.
- e. <u>Schools and Child Care</u>: As shown in figures 2 and 3, the planning area is currently served by both the Martinez and Mt. Diablo School Districts. Both Districts have indicated the existence of adequate classroom space to serve the anticipated growing population. The benefit of this plan, however, is to advise the District's in a quantitative sense over time as to the likely growth in primary and secondary enrollment.

One important service which is currently in short supply, in light of the growing frequency of single parent households and dual income households is child care. Although not perceived as a traditional public service, the availability of reliable, high quality child care, particularly before and after school hours, is essential to maintaining a high quality of life within the current economic structure of our community. Despite an ongoing commitment to providing a supply of affordable housing, it is accepted that the cost of housing will continue to inflate. This Plan addresses this situation through additional job opportunities within the community, but cannot avoid an expected increase in the demand for child care services. These services can be provided either on an uncoordinated basis through independent private sector ventures, or through publicly assisted private projects on school campuses. Once such program that is currently operational at the John Swett Elementary School (Martinez Unified School District). Another such program was recently authorized by the Martinez School Elementary School, with the City supplying a source of funding to construct facilities and the School District providing land without charge. Together these two sources of assistance enable the care provider to charge a lower fee, making the service affordable to a broader cross-section of the community. An additional significant advantage of this arrangement is to make the program visible to the community (and therefore more accountable), as well as to provide a mechanism for screening and selection of the operator to assure the highest possible quality.

The public/private cooperative arrangement for child care is considered an essential part of this plan. It may be financed either through private sector contributions or through a nominal fee charged to non-residential developers on an employment added basis.

V. CONCLUSION

The proposed land use policy changes represented in this new Plan correspond to slight increases in treated water demand and sanitary sewer capacity demand. The land use policy changes to not represent significant increases on the transportation system or school system. In order to insure that adequate reserves of capacity in the City's infrastructure to accommodate a stable, continuous rate of growth while maintaining acceptable levels of service on our streets, in our parks and for other special services, it is necessary that the City commence a process for financing of necessary improvements. This Plan recommends commencement of work on a development impact fee ordinance which would incorporate a component charge for each of the services identified in this Plan. It is recognized that some fees would be charged on a per square foot basis, whereas it would be more appropriate to charge fees on a per dwelling unit or other basis, depending upon the nature of the project.

EXECUTIVE SUMMARY

Environmental Resource Group, Inc. has prepared this *Phase I Environmental Site Assessment* of the subject property in general accordance with ASTM Standard E 1527-13. Our assessment has been performed to determine if the potential exists for significant site contamination from either onor off-site sources for the purpose of identifying any *recognized environmental conditions* in connection with the subject property. We understand that this report will be used for environmental due diligence purposes related to a commercial real estate transaction involving the subject property.

The approximate 6.05-acre subject property is situated southerly of the intersection of Arnold Drive and Starflower Drive in a mostly residential area of Martinez, Contra Costa County. The subject property is identified by the Contra Costa County Assessor's Office as parcel numbers (APNs) 161-400-009 and -010. The subject property currently is vacant/unused and undeveloped. The majority of the subject property supports volunteer vegetation (bushes, brush and grasses) as well as a number of mature trees. A seasonal drainage swale traverses the northeasterly portion of the property, generally draining from west to east. A smaller, concrete-lined, shallow drainage ditch is situated generally parallel to and northerly of the swale. These surface water/drainage features did not contain water at the time of our site reconnaissance. Additionally, a partially exposed concrete pipe (several feet in diameter) and associated manhole cover labeled "storm sewer" trend east to west across the north easterly portion of the site generally along mentioned seasonal drainage swale. Minor amounts of debris and rubbish were observed locally on the property, including wood debris, a few discarded tires, and minor amounts of concrete rubble. Additionally, a tractor with attached disc implement was stored on the property at the time of our reconnaissance; we understand that the tractor is used for seasonal weed abatement/fire control purposes. Our reconnaissance identified no obvious evidence that current use or activities on the subject property have resulted in a significant release of hazardous substances or petroleum products to the environment on the subject site.

Our historical research indicates that the subject property has mostly been vacant and undeveloped since at least the late 1800s. As early as 1897, a portion of the Arnold Drive roadway traversed the far northeasterly portion of the property; it appears that this section of roadway was removed around the early 1970s when Arnold Drive was realigned along the northerly margin of the site. The subject property appears to have been farmed for periods of time prior to the 1970s. The existing drainage swale across the property is apparent as early as the early 1970s, and the smaller concrete-lined shallow drainage ditch was constructed onsite by the early 1980s. Our historical research has not revealed the likelihood that past on-site activities would have resulted in a significant release of hazardous substances or petroleum products to the environment on the subject property.

Neither our research of government agency information nor our observations of adjoining areas revealed evidence of nearby contamination conditions of sufficient magnitude or proximity to be considered a threat to the environment on the subject property.

This Phase I Environmental Site Assessment has not revealed evidence of *recognized environmental conditions* in connection with the subject property. In our opinion, the findings of this Phase I study do not warrant further due diligence environmental investigation of the subject property at this time. In consideration of the environmental condition of the property, please refer to the information contained in the remainder of this report.

PHASE I ENVIRONMENTAL SITE ASSESSMENT ARNOLD DRIVE PROPERTY APNs 161-400-009 and -010 Arnold Drive Martinez, Contra Costa County, California

1.0 INTRODUCTION

Environmental Resource Group, Inc. has completed this *Phase I Environmental Site Assessment* of the subject property at the request of The Austin Group LLC. The approximate 6.05 acre subject property is situated southerly of the intersection of Arnold Drive and Starflower Drive in Martinez, Contra Costa County, California. The subject property is identified by the Contra Costa County Assessor's Office as parcel numbers (APNs) 161-400-009 and -010. The subject site currently is undeveloped and unused.

We understand that this report will be used for environmental due diligence purposes related to a commercial real estate transaction involving the subject property. This *Phase I Environmental Site Assessment* has been performed in general accord with the scope and limitations of the 2013 American Society for Testing and Materials (ASTM) *Standard Practice for Phase I Environmental Site Assessments Process* (E 1527-13).

1.1 PURPOSE AND KEY DEFINITIONS

The purpose of our assessment has been to identify any *recognized environmental conditions* in connection with the subject property to determine if the potential exists for significant site contamination from either on- or off-site sources. A *recognized environmental condition* is defined in the referenced standard as:

"the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions." A de minimis condition is defined as "a condition that generally does not present a threat to human health or the environment and that

generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not recognized environmental conditions nor controlled recognized environmental conditions".

We have also considered whether any historical recognized environmental conditions or controlled recognized environmental conditions are associated with the property. A historical recognized environmental condition is defined as:

"a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)".

A controlled recognized environmental condition is defined as:

"a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)".

1.2 PROPERTY INFORMATION AND LOCATION

General Property Information/Location			
Property Name: Arnold Drive Property	Addres	s: Arnold Drive	e, Martinez, California
APNs: 161-400-009 and -010	County:	Contra Costa	Owner(s): The Austin Group LLC,
Location: See Vicinity Map, Plate 1	Size: A	pprox. five acres	Blunt Trauma LLC, Tilden-Amare LLC through TIC agreement
Latitude/Longitude: 37.9922240, -122. 0817990		Current Use: Vacant/unused and undeveloped	
Considered Future Use: Multi-family residential development			

1.3 SCOPE OF WORK

Protocol and ASTM Scope Items

This *Phase I Environmental Site Assessment* has been performed in general accord with the scope and limitations of the 2013 ASTM *Standard Practice for Phase I Environmental Site Assessments Process* (E 1527-13). A *Phase I Environmental Site Assessment* is the primary component of an "*All Appropriate Inquiry*" designed to evaluate the environmental integrity of a property as part of the due diligence required to qualify for Landowner Liability Protections under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The regulatory requirements and standards for

Phase I environmental site assessment were established by the Federal Environmental Protection Agency and are outlined in 40 CFR Part 312, "The Final Rule for Standards and Practices for All Appropriate Inquiries (AAI)".

The scope of this investigation included:

- Review of physical setting information sources
- Historical research, including review of any available, relevant environmental reports
- Site reconnaissance and observations of adjacent and nearby properties
- Interviews of individuals knowledgeable of the property and agency representatives
- Review of regulatory agency listings and records, including an agency database report
- Evaluation of the collected information, and preparation of this report

Non-ASTM Scope Items

The scope of work associated with this *Phase I Environmental Site Assessment* has not included soil, soil gas, or groundwater sampling/testing, a chain-of-title document search, an evaluation of business environmental risk, an environmental compliance audit, research regarding use limitations (deed restrictions), or a property lien search. Our study also has not included evaluation of the following non-ASTM scope items: asbestos-containing building materials or naturally-occurring asbestos; lead-based paint; indoor air quality; industrial hygiene or safety; cultural or historic resources; ecological resources or endangered species; wetlands; biological agents; or, mold. We could develop a scope and cost estimate for performance of non-ASTM scope items upon request.

1.4 EXCEPTIONS AND LIMITATIONS

No significant exceptions to or deviations from the ASTM standard (E 1527-13) were made during the course of our work. The ASTM Standard E 1527-13 is designed to establish good commercial and customary practices to be implemented by the Environmental Professional in performing Phase I assessment of a property in a manner that satisfies CERCLA requirements. Our services are performed in a manner consistent with the level of care and skill ordinarily exercised by members of the profession currently practicing in the same locality under similar conditions. The findings and conclusions presented herein are based on the cited reference materials, conversations, reconnaissance, and other information obtained from a variety of sources deemed to be reliable. No warranty regarding the accuracy of our opinions or conclusions is expressed or implied. It should be understood that the scope of investigation described herein is not exhaustive, and performance of a *Phase I Environmental Site Assessment* cannot completely eliminate uncertainties regarding the potential for environmental impairment of a property.

1.5 USER RELIANCE AND CONFIDENTIALITY

The Austin Group, LLC, Blunt Trauma LLC, Tilden-Amare LLC and William F. Schrader, Jr. may read and rely upon the information, findings, conclusions, and recommendations contained herein. Without prior written consent of the client, Environmental Resource Group, Inc. will keep confidential and not disclose to any person or entity, any data or information provided by the client or generated in conjunction with the performance of this study. Provisions of confidentiality shall not apply to data or information obtained from the public domain or acquired from third parties not under obligation to the client to maintain confidentiality.

2.0 PHYSICAL SETTING

2.1 PHYSICAL SETTING SOURCES

Sources used to determine the regional setting during this study have included the following:

- 1977 CGS Geologic Map of California (1:750,000)
- 1991 CGS Geologic Map of the San Francisco-San Jose Quadrangle (1:250,000)
- USGS Martinez Quadrangle (1:24,000)

2.2 TOPOGRAPHY

As shown on the USGS Martinez Quadrangle (see Plate 1), the subject property is situated at elevations on the order of 100 to 150 feet above sea level. Site surfaces are gently to moderately sloped, and surface gradients in the vicinity generally slope east-southeast.

2.3 GEOLOGY AND SOILS

The Subject property is located within the central portion of the Coast Ranges province of California. The Coast Ranges generally consist of an alternating series of parallel mountains and valleys located adjacent to the Pacific Coast. The Coast Ranges are composed primarily of Mesozoic and Cenozoic deposits and have undergone complex episodes of erosion, volcanism, folding, faulting, and uplift. The region is tectonically dominated by horizontal shear caused by the relative motion of the Pacific and North American plates. Available geologic mapping indicates that surface deposits on the more elevated portions of the subject property (northeasterly and southwesterly site areas) are underlain by Eocene Domengine Sandstone and that surface deposits within the central site area are comprised of Quaternary alluvium.

Soil mapping by the the US Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) indicates that the majority of onsite soils on the southelry and far northeasterly portions of the site are identified as Gaviota sandy loam; this soil unit is indicated to be somewhat excessively drained. The majority of the northerly portion of the site supports onsite soils identified as Positas loam; this soil unit is indicated to be moderately well drained. Soils on the far southwesterly portion of the site are identified as Lodo clay loam; this soil unit is indicated to be somewhat excessively drained.

2.4 SURFACE WATER AND GROUNDWATER

A seasonal drainage swale traverses the northeasterly portion of the property, generally draining from west to east. A smaller, concrete-lined, shallow drainage ditch is situated generally parallel and northerly of the swale. These surface water/drainage features did not contain water at the time of our site reconnaissance. The nearest prominent surface water feature, the Contra Costa Canal, is situated approximately 900 feet easterly of the subject site, at its closest point. Storm water generated on the subject property would appear to be directed towards the mentioned onsite drainage features and adjoining properties. We observed no evidence of suspicious run-off to, or from the subject property during our recent site visit.

Groundwater conditions within the general area of the subject property have been considered utilizing information obtained from the California Department of Water Resources, Contra Costa County, and the California Regional Water Quality Control Board. Our research has not revealed specific information regarding the groundwater depth and flow conditions in the immediate vicinity of the subject property. However, shallow groundwater in the area likely is largely controlled by topography and bedrock conditions. Information for the general area suggests that groundwater can occur at depths as shallow as ten feet. Shallow groundwater flow beneath site likely is to the east-south east, consistent with local topography.

3.0 SITE RECONNAISSANCE

Site Reconnaissance			
Date: January 24, 2020 Brusca Associates, Inc. Representatives: Alycia Weather: Sunny			
Site Layout: See Plate 2, Site Map Site Photographs: See Appendix A Limiting Conditions: Nor			

3.1 SITE DESCRIPTION

The approximate 6.05-acre subject property is situated southerly of the intersection of Arnold Drive and Starflower Drive in a mostly residential area of Martinez in Contra Costa County. The subject property is identified by the Contra Costa County Assessor's Office as parcel numbers (APNs) 161-400-009 and -010. The subject property currently is vacant/unused and undeveloped. The majority of the subject property supports volunteer vegetation (bushes, brush and grasses) as well as a number of mature trees.

A seasonal drainage swale traverses the northeasterly portion of the property, generally draining from west to east. A smaller, concrete-lined, shallow drainage ditch is situated generally parallel to and northerly of the swale. These surface water/drainage features did not contain water at the time of our site reconnaissance. Additionally, a partially exposed concrete pipe (several feet in diameter) and associated manhole cover labeled "storm sewer" trend east to west across the north easterly portion of the site generally along mentioned seasonal drainage swale.

Minor amounts of debris and rubbish were observed locally on the property, including wood debris, a few discarded tires, and minor amounts of concrete rubble. Additionally, a tractor with attached disc implement was stored on the property at the time of our reconnaissance. We understand that the tractor is used for seasonal weed abatement/fire control purposes.

3.2 HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS

No hazardous substances or petroleum products are used/stored on the subject site.

3.3 UTILITIES

Electricity and natural gas service are provided to the vicinity by the Pacific Gas and Electric Company (PG&E). Municipal drinking water is provided to the area by the City of Martinez. The general vicinity is connected to the local sewer utility (Mt. View Sanitary District).

3.4 COMMON SITE-SPECIFIC ENVIRONMENTAL CONCERNS

Potential Environmental Concern	Observations/Comments
Storage Tanks, Vent/Fill Pipes	None revealed by our reconnaissance or research
Petroleum Pipelines or Oil & Gas Wells	None revealed by our reconnaissance or research
Drums	None revealed by our reconnaissance or research
Unidentified Substance Containers	None revealed by our reconnaissance or research
Sumps	None revealed by our reconnaissance or research
Floor Drains	None revealed by our reconnaissance or research
Stains	None revealed by our reconnaissance or research
Septic Systems	None revealed by our reconnaissance or research
Stressed Vegetation	None revealed by our reconnaissance or research
Solid Waste Disposal/Fill Placement	None revealed by our reconnaissance or research
Pools of Liquid/Standing Water	None revealed by our reconnaissance or research
Unusual Odors	None revealed by our reconnaissance or research
Polychlorinated Biphenyls (PCBs)	None revealed by our reconnaissance or research
Pits, Ponds, or Lagoons; Wastewater Treatment	None revealed by our reconnaissance or research
Wells	None revealed by our reconnaissance or research

3.5 RESULTS OF SITE RECONNAISSANCE

We observed no obvious evidence of contamination conditions, improper hazardous substance/petroleum products use or storage, environmentally suspicious dumping or discharge, or significant staining. Our reconnaissance identified no obvious evidence that current use or activities on the subject property have resulted in a significant release of hazardous substances or petroleum products to the environment on the subject property.

4.0 ADJOINING SITE CONDITIONS AND USE

The approximate 6.05-acre subject site is located within a mostly residential area of Martinez in Contra Costa County. The subject site is generally bounded by Arnold Drive and a sanitary sewage pump station to the north, by vacant/undeveloped land to the south, by office property to the east, and by a residential area to the west. Information regarding adjoining and nearby site use is presented below.

Direction	Description
Northerly	Mt. View Sanitary District Pump Station and Arnold Drive, beyond which are single family residences
Southerly	Vacant/unused and undeveloped land, beyond which is Highway 4
Easterly	Commercial/Office Property – Contra Costa County Offices (2530 Arnold Drive)
Westerly	Single-family residences

Our research and visual observations of adjoining and nearby properties did not identify current conditions or activities considered likely to have resulted in a significant release of hazardous substances or petroleum products affecting the environment on the subject property. It is indicated that the Mt. View Sanitary District Pump Station located directly northerly of the property includes a backup diesel generator and associated 125-gallon above ground storage tank. Information obtained during our review of agency listings and records for adjoining and nearby sites is presented in *Section* 8.3 of this report.

5.0 INTERVIEWS AND USER QUESTIONNAIRE

5.1 INTERVIEWS

The following individuals were contacted in person, by phone, or by written communication to obtain information relevant to the environmental status and condition of the subject property.

Relationship to Property	Name/Affiliation	Comments
User Representative/ Owner Representative/Key Site Manager	William F. Schrader, Jr.	See Section 5.2
Agency Official	Alex McMullen, Contra Costa County Health Services Department	See Section 8.3

As a part of our research, we conducted an interview with a current owner representative, William F. Schrader, Jr. Mr. Schrader indicated that he has been familiar with the site since the property was acquired in 2016 and that during that time the site has been undeveloped and unused. Mr. Schrader indicated that there are no environmental liens or environmentally-related activity and use limitations associated with the subject property. He also indicated that there are no known past hazardous substances/petroleum hydrocarbons releases or known contamination conditions on the property, and that there are no activities or features of potential environmental concern (including past or present underground storage tanks, above-ground storage tanks, on-site waste disposal, pits, sumps, oil-water separators, or septic systems) associated with the site.

Additional information obtained from interviews is presented in the relevant sections of this report.

5.2 USER QUESTIONNAIRE

In order to qualify for one of the Landowner Liability Protections offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the user of this report must provide specific information (if available) to the environmental professional. A user representative (William F. Schrader, Jr.) completed a *User Questionnaire* for the subject property; a copy of the completed *User Questionnaire* is presented in Appendix B. The responses presented on the *User Questionnaire* do not reveal any evidence of recognized environmental conditions in connection with the subject property.

6.0 PREVIOUS ENVIRONMENTAL INVESTIGATION

In 2015 Environmental Resource Group, Inc. prepared a *Phase I Environmental Site Assessment* of the subject property. At the time of the 2015 study, the subject property reportedly was vacant/unused and undeveloped land; the site conditions observed during our recent site visit are very similar to those described in the 2015 Environmental Resource Group, Inc. report. The 2015 study did not identify any *recognized environmental conditions* in connection with the subject property. A copy of the 2015 *Phase I Environmental Site Assessment* is included in Appendix E of this report.

7.0 HISTORICAL RESEARCH

7.1 HISTORICAL INFORMATION SOURCES

General

As a part of this *Phase I Environmental Site Assessment*, historical research was performed to determine the past usage of the subject property and to evaluate the potential that past site usage resulted in recognized environmental conditions on the property. In accordance with ASTM Standard E 1527-13, our research has included evaluation of obvious uses of the property back to initial site development, or the 1940s, whichever is earlier. A number of different historical resources have been considered; the historical information sources considered are discussed below. Selected historical information (including aerial photographs and topographic maps) is presented in Appendix C.

Aerial Photographs

We reviewed historical aerial photographs dated 1939, 1946, 1949, 1950, 1958, 1968, 1974, 1982, 1993, 1998, 2005, 2006, 2009, 2010, 2012, and 2018. The aerial photograph dated 1939 shows the subject property as mostly vacant land; a roadway (apparent former alignment of Arnold Drive) extended across the far northeasterly portion of the site at that time. Site conditions generally appear unchanged on the aerial photographs dated 1946, 1949, 1950, 1958, and 1968, except that the property appears to have been farmed for periods of time. On the aerial photograph dated 1974, the roadway (former Arnold Drive) on the easterly portion of the property appears to have been removed and Arnold Drive was realigned along the northerly boundary of the subject site. Additionally, the drainage swale traversing the northeasterly portion of the property is apparent on the 1974 photograph. On the 1982 aerial photograph, the concrete-lined shallow ditch directly northly of the drainage swale is apparent. No significant changes to the subject property are apparent on the subsequent aerial photographs dated 1993, 1998, 2005, 2008, 2009, 2010, 2012, and 2018; the site appears to remain undeveloped and unused.

USGS Topographic Maps

We reviewed U.S. Geological Survey topographic quadrangle maps (Martinez Quadrangle) dated 1897, 1915, 1948, 1949, 1959, 1968, 1973, 1980, 1993, 1995, 2012, 2015, and 2018. The quadrangles dated 1897 through 1968 shows the subject property as vacant and generally undeveloped except that a portion

¹ Environmental Resource Group, Inc.; "Draft Phase I Environmental Site Assessment, Vacant Lot, Martinez, California,"; October 5, 2015.

of a roadway (former alignment of Arnold Drive) trends across the northeasterly portion of the site. On the 1973 quadrangle map Arnold Drive appears to have been realigned along the northerly margin of the property. No structures or features of environmental significance are depicted on the subsequent quadrangle maps dated 1993, 1995, 2012, 2015, and 2018.

Sanborn Fire Insurance Maps

Our research indicates that the area of the subject property is not covered by available Sanborn Fire Insurance Maps.

Local Street Directories

Our historical research of city directories (Cole Information Services and Haines Criss-Cross Directory) revealed no past occupant listings for the subject property.

Oil and Gas Well Maps

Our review of California Department of Conservation Division of Oil and Gas records indicates no evidence of past or present oil or gas wells on the subject property.

EDR Proprietary Listings

Environmental Data Resources (EDR) maintains proprietary databases of historic potential high-risk sites, including dry cleaners, gasoline stations, automotive stations, and manufactured gas plants. The proprietary databases were developed largely from historic business directories. As shown in the database report presented in Appendix D, the subject property does not appear in any of these databases.

Interviews

Interview information is presented in *Section 5.1* of this report.

Previous Environmental Report

Previous environmental investigation of the property was discussed in Section 6.0 of this report.

7.2 SUMMARY OF PAST SITE CONDITIONS AND USAGE

The historical information obtained from the sources described above indicate that the subject property has mostly been vacant and undeveloped since at least the late 1800s. As early as 1897, a portion of the Arnold Drive roadway traversed the far northeasterly portion of the property; it appears that this section of roadway was removed around the early 1970s when Arnold Drive was realigned along the northerly margin of the site. The subject property appears to have been farmed for periods of time prior to the 1970s. The existing drainage swale across the property is apparent as early as the early 1970s, and the smaller concrete-lined shallow drainage ditch was constructed onsite by the early 1980s.

It is indicated that past site activities have not included the use or storage of significant quantities of hazardous substances or petroleum products. Our research and reconnaissance have not revealed evidence indicating the likelihood that past on-site activities would have resulted in a significant release of hazardous substances or petroleum products to the environment on the subject property.

7.3 PAST ADJOINING SITE USAGE

Information obtained from historical sources cited in *Section 7.1* indicates that adjoining and nearby properties historically supported vacant land and farmland, including orchards. The northerly adjoining roadway (currently Arnold Drive) was in place by the late 1890s. Highway 4 southerly of the property was constructed by the 1930s and expanded/widened in later years. The vacant area southerly of the subject site and northerly of Highway 4 has never been developed; however, this area appears to have been farmed for periods of time prior the 1970s. The northerly adjoining property (across Arnold Drive) supported orchards, rural farm structures, and rural single-family residences as early as the 1950s, and more extensive residential development of this area was apparent by the 1970s. Around the early 1980s, the northerly intersecting roadway (Starflower Drive) was in place, and the area northerly of Arnold Drive was redeveloped with the existing single-family residential development by the early 1990s.

The Mt. View Sanitary District Pump Station situated directly northerly of the central portion of the subject property and southerly of Arnold Drive was constructed by the early 1990s. This facility includes a diesel-fueled backup generator and an associated above ground diesel tank.

During the early 1980s, the westerly adjoining property was developed with the existing single-family residences. By the 1990s, the easterly adjoining property was developed with the existing commercial/office building and associated pavements; the easterly adjoining development has been occupied Contra Costa County offices for a number of years.

Our research has not identified past adjoining or nearby site usage considered likely to have resulted in a release of hazardous substances or petroleum products that would have affected the environment on the subject property.

8.0 AGENCY RECORDS REVIEW

8.1 INFORMATION SOURCES

As a part of this *Phase I Environmental Site Assessment*, agency listings and records were reviewed and considered to evaluate the environmental status and condition of the subject property. Agency research has included obtaining an agency listings database report through a third-party provider; the database records search (including search radii) meets and exceeds the agency listings search provisions of ASTM Standard E 1527-13. The database report was obtained from Environmental Data Resources (EDR) and is presented in Appendix D. In addition to review of the agency database report, supplemental

research was performed via online environmental databases (including Geotracker² and Envirostor³), and through direct communications and file review (as warranted) with various agencies (including local agencies not included in the database report).

Federal, State, and Tribal Listings/Records

A partial summary of federal, state, and tribal agency records and listings reviewed/researched, including the *Standard Environmental Record Sources* required by ASTM E 1527-13, is presented below. A significant number of additional lists were reviewed; for a comprehensive listing of the agency sources researched and descriptions of the agency listings, refer to the appended database report.

Federal Databases	Search Radius	Comments
NPL Site List	1 mile	No relevant listings/records identified
Proposed NPL Site List	1 mile	No relevant listings/records identified
NPL Liens List	Subject Property	No relevant listings/records identified
Delisted NPL Site List	1 mile	No relevant listings/records identified
CERCLIS List	0.5 mile	No relevant listings/records identified
CERCLIS Federal Facility List	0.5 mile	No relevant listings/records identified
CERCLIS NFRAP Site List	0.5 mile	No relevant listings/records identified
RCRA CORRACTS Facilities List	1 mile	No relevant listings/records identified
RCRA Non-CORRACTS TSD Facilities List	0.5 mile	No relevant listings/records identified
RCRA Generators List	0.25 mile	No relevant listings/records identified
US Engineering Controls Registry	0.5 mile	No relevant listings/records identified
US Institutional Controls Registry	0.5 mile	No relevant listings/records identified
LUCIS	0.5 mile	No relevant listings/records identified
ERNS List	Subject Property	No relevant listings/records identified

State/Tribal Databases	Search Radius	Comments
CA RESPONSE (equiv. NPL)	1 mile	No relevant listings/records identified
CA ENVIROSTOR (equiv. CERCLIS)	1 mile	No relevant listings/records identified
RWQCB SLIC List	0.5 mile	No relevant listings/records identified
Landfill/Solid Waste Disposal Site Lists	0.5 mile	No relevant listings/records identified
Leaking Storage Tank Lists	0.5 mile	No relevant listings/records identified
Registered Storage Tank Lists	0.25 mile	No relevant listings/records identified
Voluntary Cleanup Sites Lists	0.5 mile	No relevant listings/records identified
Brownfield Sites	0.5 mile	No relevant listings/records identified

² Geotracker (<u>www.geotracker.waterboards.ca.gov</u>); environmental database of regulated facilities in California maintained by the State Water Resources Control Board.

³ Envirostor (<u>www.envirostor.dtsc.ca.gov</u>); online database of contaminated sites, environmental cleanups, and permitted facilities in California maintained by the Department of Toxic Substances Control.

Local Agency Listings/Records

Contra Costa County Health Services Division (CCCHS) is the local *Certified Unified Program Agency (CUPA)* responsible for sites located within Contra Costa County. As the local CUPA, the CCCHS is certified and responsible for oversight of the following consolidated programs: Hazardous Materials Release Response Plans and Inventories (Business Plans); California Accidental Release Program; Underground Storage Tank Program; Aboveground Petroleum Storage Act; Hazardous Waste Generator and Onsite Hazardous Waste Treatment (tiered permitting) Programs; and, California Uniform Fire Code: Hazardous Materials Management Plans and Hazardous Material Inventory Statements. Our research with the CCCHS indicates that they do not maintain any environmentally-relevant records regarding the subject property. Additionally, our research does not indicate that other local agencies maintain any environmentally-relevant records or files pertaining to the subject property.

8.2 SUBJECT PROPERTY LISTINGS/RECORDS

Our research has not revealed that the subject property appears on the federal or state listings reviewed. Additionally, our research with local agencies, including the CUPA, indicates that none of these agencies maintains environmentally-relevant records or files pertaining to the subject property.

8.3 NEARBY SITES LISTINGS/RECORDS

Our research of agency listings and records indicates that a few nearby sites appear on agency listings within the search radii considered (up to one mile from the subject property). We researched and reviewed agency information regarding nearby listed sites to evaluate whether readily available information would suggest the potential for environmental impairment of the subject property from off-site areas. Our research and review of agency information regarding the nearby listed sites included consideration of the following:

- the nature/type of each listing
- the proximity of these sites to the subject site
- the nature of any nearby hazardous materials violations
- the magnitude and character of nearby known contamination conditions (including details regarding contaminant type, contamination extent, affected media, and agency status).

The agency information reviewed does not indicate that any of the nearby listed sites poses a significant threat to the environmental integrity of the subject property. Notable nearby listed sites are discussed below.

Mt. View Sanitary District - #3 Pump Station, Arnold Drive and Starflower Drive, Martinez

The Mt. View Sanitary District - #3 Pump Station site is addressed as Arnold Drive and Starflower Drive and is located directly northerly of the central portion of the subject property and southerly of Arnold Drive. Our review of the appended agency listing database indicates the Mt. View Sanitary District - #3 Pump Station site appears on the *California Environmental Reporting System (CERS)* database. We reviewed records for the Mt. View Sanitary District - #3 Pump Station site maintained by the CCCHSD; the available records dated 2004 through 2019 generally include inspection reports, Hazardous Materials Programs (HMP) records, operation permits and permit renewals, emergency

response plan and compliance documents, safety training records, owner identification forms, inventory reports, remote waste consolidation site notices. Hazardous materials reported onsite have generally included waste oil and antifreeze, batteries, and diesel stored in a 125-gallon above ground storage tank within the building. None of the records or available information indicates any significant violations, contamination conditions, or the past releases to the environment at the Mt. View Sanitary District - #3 Pump Station site. Based on the available information, it does not appear that the Mt. View Sanitary District - #3 Pump Station site presents a significant environmental concern to the subject property.

Contra Costa County Sheriff's Department/CCC Forensic Services Summit Center, 2530 Arnold Drive, Martinez

The Contra Costa County Sheriff's Department/CCC Forensic Services Summit Center site is addressed as 2530 Arnold Drive, Martinez, located directly easterly of the subject property. Our review of the appended agency database listing report indicates the Contra Costa County Sheriff's Department/CCC Forensic Services Summit Center site appears on the *Contra Costa County Site List*; this list includes sites from the underground tank, hazardous waste generator and business plan/2185 programs. Additionally, the Contra Costa County Sheriff's Department/CCC Forensic Services Summit Center site appears on the *California Environmental Reporting System (CERS) HAZ WASTE* listing as well as the RCRA NONGEN listing; non-generators do not presently generate hazardous waste. Information provided in the database report specifies that "less than 5 tons/year" of hazardous waste is generated at the Contra Costa County Sheriff's Department/CCC Forensic Services Summit Center site.

We reviewed records for the Contra Costa County Sheriff's Department/CCC Forensic Services Summit Center site maintained by the CCCHSD; the available records dated 2013 through 2018 generally include operational permits, permit renewal notices, inspection reports, hazardous waste generator forms, business identification forms, Department of Toxic Substances Control (DTSC) forms, Contra Costa County documents, and Hazardous Materials Programs (HMP) records. Small amounts of hazardous materials generally used or stored onsite have included waste flammable, organic, corrosive, and oxidizing liquids, waste mercury, and toxic waste solids. None of the records or available information indicates any significant violations, contamination conditions, or releases to the environment at the Contra Costa County Sheriff's Department/CCC Forensic Services Summit Center site. Based on the available information, it does not appear that the Contra Costa County Sheriff's Department/CCC Forensic Services Summit Center site presents an environmental concern to the subject property.

9.0 SIGNIFICANT DATA GAPS

Environmental assessment data gaps may affect the ability to identify recognized environmental conditions. Data gaps may include the inability to access relevant on-site structures or to communicate with individuals knowledgeable of the subject property or nearby contamination conditions. Lack of adequate historical information sources can also result in data gaps. In general, minor data gaps do not hinder an environmental professional's ability to render an opinion regarding potential environmental conditions associated with the subject property. There were no significant data gaps identified for this study.

10.0 FINDINGS, OPINIONS, AND CONCLUSIONS

Environmental Resource Group, Inc. has performed *Phase I Environmental Site Assessment* in conformance with the scope and limitations of ASTM Standard E 1527-13 of the Arnold Drive Property identified by the Contra Costa County Assessor's Office as APN 161-400-009 and -010. Any exceptions to, or deletions from, this practice are described in *Section 1.4* of this report. This assessment has revealed no evidence of existing, controlled, or historical recognized environmental conditions in connection with the property.

11.0 STATEMENT OF QUALIFICATIONS

Environmental Resource Group, Inc. is a multi-disciplinary geoscience consulting firm serving private and public-sector clients throughout Central and Northern California, and beyond. The firm specializes in environmental assessment and engineering geology consulting related to property acquisition, finance, due diligence, development, and regulatory compliance. Environmental services include: initial site assessment; soil, soil gas, and groundwater investigations; site characterization; groundwater monitoring; remedial feasibility studies; remedial design; and, clean-up oversight.

The Environmental Specialist for this study, Alycia Cridebring, holds a Bachelor of Science degree in Environmental Science and Management from the University of California at Davis, California. Ms. Cridebring has been an Environmental Specialist for Brusca Associates, Inc. since 2017.

Joe Brusca, directly oversaw all aspects of this Phase I. Mr. Brusca holds a Bachelor of Science degree in Geology from the University of California at Davis, California, is a Professional Geologist and Certified Engineering Geologist in the State of California, and has over 30 years of environmental and geological consulting experience spanning a broad range of geographic areas, project types, and client needs. Mr. Brusca and key staff are certified for Hazardous Waste Site Operations training in accord with 29 CFR 1910.120.

12.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professionals as defined in §312.10 of 40 CFR 312. An Environmental Professional is "a person who possesses sufficient specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases on, at, in, or to a property, sufficient to meet the objectives and performance factors in §312.20(e) and (f) of 40 CFR 312."

13.0 CLOSING

If you have any questions or require additional information, please contact the undersigned at (415) 381-6574.

APPENDIX B – User Questionnaire

USER QUESTIONNAIRE

Page 1 of 2

This *User Questionnaire* is part of the *Phase I Environmental Site Assessment* (ESA). To qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments") the user must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete. Attach additional sheets if necessary for further explanation.

User Representative Name:	Signature: Date:
Property Address:	Parcel Number(s):
1. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law? □ No □ Yes, Explain:	
□NO □Tes, Explain:	
2. Are you aware of any activity and use limitations, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law? No Pes, Explain:	
3. Do you have any specialized knowledge or experience	related to the property or nearby properties? For
example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	
□No □Yes, Explain:	
4. Does the purchase price being paid for this property reproperty? If you conclude that there is a difference, have is because contamination is known or believed to be presented in the presentation. □Yes, Explain:	e you considered whether the lower purchase price
5. Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened	
releases?	onutions mulcative of releases of timeatened
□No □Yes, Explain:	
5a. Do you know the past uses of the property? □No □Yes, Explain:	
5b. Do you know of specific chemicals that are present or once were present at the property? □No □Yes, Explain:	
5c. Do you know of spills or other chemical releases	that have taken place at the property?
□No □Yes, Explain:	
5d. Do you know of any environmental cleanups tha ☐No ☐Yes, Explain:	t have taken place at the property?
6. As the user of this ESA, based on your knowledge and obvious indicators that point to the presence or likely property of the presence of likely property. See the presence of likely property of the presence of likely property of the presence of likely property.	

USER QUESTIONNAIRE

Page 2 of 2

ADDITIONAL INFORMATION

Certain information should be collected, if available, and provided to the environmental professional selected to conduct the Phase I ESA. This information is intended to assist the environmental professional but is not necessarily required to qualify for one of the LLPs.

Why is the Phase I ESA required?
What is the nature of the property transaction (sale, purchase, exchange, bank loan, etc.)?
What is the planned use of the property?
Is there any scope of services desired or required beyond ASTM 1527 Phase I ESA 1527?
Identify all parties who will rely on the Phase I ESA report.
Are there any special terms or agreements which must be agreed upon by the environmental professional?
Is there any other knowledge or experience with the property (for example, copies of prior environmental reports or documents relative to the environmental conditions of the property)?
Identify the current owner of the property and how the owner can be reached.
Identify the site contact and how the contact can be reached.

with any questions or comments.

The EDR FieldCheck ®System enables EDR's customers to make certain online modifications to the maps and text contained in EDR Radius Map Reports. As a result, the maps and text contained in this Report may have been so modified. EDR has not taken any action to verify any such modifications, and this report and the findings set forth herein must be read in light of this fact. The EDR FieldCheck System accesses user-modified records from previously submitted reports. Any user-modified record from a previous report that is plotted outside the search radius of this report may not be included in this report.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

Copyright 2020 by Environmental Data Resources, Inc. All rights reserved. Reproduction in any media or format, in whole or in part, of any report or map of Environmental Data Resources, Inc., or its affiliates, is prohibited without prior written permission.

EDR and its logos (including Sanborn and Sanborn Map) are trademarks of Environmental Data Resources, Inc. or its affiliates. All other trademarks used herein are the property of their respective owners.

A search of the environmental records was conducted by Environmental Data Resources, Inc. (EDR). BRUSCA ASSOCIATES, INC. used the EDR FieldCheck System to review and/or revise the results of this search, based on independent data verification by BRUSCA ASSOCIATES, INC.. The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in bold italics are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

An online review and analysis by BRUSCA ASSOCIATES, INC. of the CORRACTS list, as provided by EDR, has revealed that there are 3 CORRACTS sites within approximately 1 mile of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

An online review and analysis by BRUSCA ASSOCIATES, INC. of the ENVIROSTOR list, as provided by EDR, has revealed that there are 4 ENVIROSTOR sites within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

An online review and analysis by BRUSCA ASSOCIATES, INC. of the RCRA NonGen / NLR list, as provided by EDR, has revealed that there are 5 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Evaluation date: 1984-05-25 00:00:00.0 Evaluation: WRITTEN INFORMAL Area of violation: Generators - General Date achieved compliance: 1984-05-25 00:00:00.0

Evaluation lead agency: State

FINDS:

110009530132 Registry ID:

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal

facilities.

HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order

> should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to

represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as

cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as

dairy waste ponds.

Citation: 22 CCR 15 66265.192(h) - California Code of Regulations, Title 22,

Chapter 15, Section(s) 66265.192(h)

Violation Description: Failure of generator to obtain assessment or reassessment every five

(5) years or the remaining service life of the tank system, as stated in the engineer's assessment, whichever is less. This assessment applies to onground or aboveground tank systems containing only non-RCRA hazardous wastes generated onsite, or for a small quantity generator onground or aboveground tank systems containing RCRA

hazardous wastes generated onsite.

Violation Notes: OBSERVATION: A hazardous waste tank reassessment has not been

conducted for the 2500 waste oil tank system within the last 5 years of the previous tank system assessment or within the remaining service life of the tank system as stated in the engineer's report, whichever is less. CORRECTIVE ACTION: Obtain a written hazardous waste tank system reassessment for the waste oil tank system in accordance with

22 CCR 15 66265.192 and submit a copy to the CUPA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order

> should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to

represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as

cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as

dairy waste ponds.

Address: 5019 IMHOFF

City, State, Zip: MARTINEZ, CA 94553

Site ID: 104139 CERS ID: 213875

CERS Description: NPDES Wastewater and Stormwater

Violations:

Site ID: 104139

Site Name: Central Contra Costa SD WWTP

Violation Date: 08-10-1999

Citation: California Water Code Violation Description: Not reported

Violation Notes: 2,500 gal. Untreated wastewater overflowed from the collection system

in Danville. The overflow ended up with a discharge to Sycamore Creek

resulting in the violation of the permit prohibition #2. Cause of

overflow is due to grease & roots in manhole.

Violation Division: Water Boards
Violation Program: NPDMUNILRG
Violation Source: CIWQS

Site ID: 104139

Site Name: Central Contra Costa SD WWTP

Violation Date: 07-02-1996

Citation: California Water Code Violation Description: Not reported

Violation Notes: A 15-20 GALLON SEWAGE SPILL, 5-6 DAYS, UPPER HAPPY VALLEY CREEK, NO

SOLIDS, SOME COLOR, SUGGEST ADDITIONAL SAMPLING.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation
and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database
includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste
as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate
less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services,

a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary

and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities Source: Department of Social Services

Telephone: 916-657-4041

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Activity and Use Limitations (**AULs**) – "activity and use limitations – legal or physical restrictions or limitations on the use of, or access to, a site or a facility: (1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, groundwater, and/or surface water on the Target Property..."

Controlled Recognized Environmental Condition (CREC) – "a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (e.g., as evidenced by the issuance of a NFA [No Further Action] letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (e.g. Target Property use restrictions, AULS, institutional controls, or engineering controls)...a CREC shall be listed in the Findings Section of the Phase I ESA Report, and as a REC in the Conclusions Section of the... report."

Historical Recognized Environmental Condition (HREC) – "a past release of any hazardous substances or petroleum products that has occurred in connection with the Target Property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the Target Property to any required controls (e.g., Target Property use restrictions, AULs, institutional controls, or engineering controls). Before calling the past release an HREC, the EP (Environmental Professional) must determine whether the past release is a REC at the time the Phase I ESA is conducted (e.g., if there has been a change in the regulatory criteria). If the EP considers this past release to be a REC at the time the Phase I ESA is conducted, the conditions shall be included in the conclusions section of the report as a REC."

Migrate/Migration – "refers to the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, or vapor in the subsurface."

Recognized Environmental Condition (REC) – "the presence or likely presence of any hazardous substances or petroleum products, **in**, **on**, **or at** a Target Property: (1) due to any **release** to the **environment**; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment."

Release (CERCLA Definition) 42 U.S.C. §9601(22) defines a "release" as "any spilling, leaking, pumping, pouring, emitting, emptying, discharging, injecting, escaping, leaching, dumping, or disposing into the environment (including the abandonment or discharging of barrels, containers, and other closed receptacles containing any hazardous substance or pollutant or contaminant)."

EXECUTIVE SUMMARY

Environmental Resources Group ("ERG") performed a Phase I Environmental Site Assessment ("ESA") of the Vacant Lot on Arnold Drive, Martinez, California (the "Target Property"), Contra Costa County (CCC) Assessor's Parcel Numbers (APNs) 161-400-010-5 and 161-400-009-7 on behalf of Craig Chiappone (User or Client) (Figure 1).

ERG performed the Phase I ESA following the guidelines in the American Society of Testing and Materials (ASTM) Standard Designation E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process," and the United States Environmental Protection Agency (USEPA) Standards and Practices for All Appropriate Inquiries (AAI), as required under Section 101(35)(b)(ii) and (iii) of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (EPA AAI Rule), and Code of Federal Regulations (40 CFR) 312.

Phase I ESAs are conducted to identify existing or potential Recognized Environmental Conditions (RECs), Historical RECs (HRECs), or Controlled RECs (CRECs) (as defined by ASTM Standard E1527-13 and EPA AAI Rule) in connection with the Target Property, as well as to provide appropriate inquiry into the previous ownership and use of the Target Property (where applicable).

Scope of Services

The Scope of Services includes "All appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice", as defined in 42 USC 9601(35) (B). The Scope of Services includes observations for RECs, as well as a review of *reasonably ascertainable information* in regulatory files provided within reasonable time and cost constraints. Accordingly, it cannot be guaranteed that all files are examined, or that every contingency is investigated. These limitations are in conformance with the stated guidelines of ASTM E1527-13. An evaluation of business environmental risk associated with a parcel of commercial real estate is not included in this assessment. This Phase I ESA included assessment of the Target Property, general reconnaissance of adjacent properties, background research, a review of available and pertinent local, state, and federal regulatory records regarding the presence of hazardous materials and/or petroleum products at the Target Property.

The Scope of Services for this Phase I ESA does not include analysis of Controlled Substances (CS), Asbestos-Containing Materials (ACM), lead-based paint (LBP), or other non-CERCLA related conditions. Licensed professionals should be contacted to assess their potential presence if there is suspicion that these substances or conditions are on the Target Property.

Purpose

ERG understands that this Phase I ESA is being conducted for purposes of a potential sale of the Target Property.

SUMMARY OF PHASE I ESA RESULTS

Target Property Description

The Target Property is located in area of Martinez, California that consists of residences, CCC-governmental offices, and open, undeveloped land. The Target Property consists of two undeveloped parcels, APNs 161-400-010-5 and 161-400-009-7, without assigned addresses along the south side of Arnold Drive.

Current Use of Target Property

The Target Property parcels are open, undeveloped fields with oak trees and poison oak bushes. The parcels appear to be naturally hilly (i.e., not fill-related), and contain an east-west trending drainage swale (with concrete culvert) along the low-lying area on the north. Unpaved gravel paths (with abundant truck tire tracks indicating off-road travel) and apparent walking trails are present throughout the property.

Several upland areas contain small homeless encampments with tents, food preparation areas, and discarded clothing. A limited amount of trash and used propane canisters are observed along the hilltop. Small areas containing concrete debris are present along the base of the hill.

Historical Use of Target Property

Based on a review of available historical documents, the Target Property was first utilized for agricultural purposes as early as the 1940s. Small row crops were observed in aerial photographs until the 1970s, at which time the parcels no longer appeared to be maintained for crops. As the row crops disappeared, the Target Property became open fields with dirt roads that appeared to have been utilized for off-road vehicle traffic. The Target Property does not appear to have been developed at any time with permanent structures.

Summary of Records Review

The CCC Department of Environmental Health (CCCDEH) stated they had no files for Parcel 161-400-009 of the Target Property. Files for 161-400-010 included a permit for installation of four soil borings in October 2009 (drilling conducted by Exploration Geoservices under the direction of consultant Cornerstone Earth Group), and a narrative for the boring file indicating backfilling of the borings and closure of the permit. According to the permit, the borings were 6-inches in diameter and were drilled to a depth of a maximum depth of 39 feet below ground surface (bgs).¹

Review of available environmental databases (i.e., Environmental Data Resources Radius Report [radius report]), and historical aerial photographs, and city directories indicate the Target Property is located in an area of Martinez comprised mostly of residences, governmental offices, and open, undeveloped land. A CCC-government complex lies east of the Target Property.

No sites likely to pose significant environmental risk to the Target Property were identified.

Site Reconnaissance

¹ The purpose of the soil borings is not stated in the permit. However, the borings are believed to be non-environmental, and related to a geotechnical investigation for a potential redevelopment of the Target Property by Hill Valley Oak Apartments.

The Target Property was inspected by the ERG representative on September 1, 2015. No evidence of USTs, ASTs, or other features likely to pose significant environmental concern to the Target Property were observed. See the main body of the report for additional descriptions of site features.

Recognized Environmental Conditions (RECs)

No RECs were identified.

Historical Recognized Environmental Condition (HREC)

An HREC includes chemical releases that occurred in the past, but resulting concentrations of hazardous materials or petroleum products in soil and/or groundwater remain within the regulating agency health criteria, and the site has been closed by said agency *without* land use restrictions (i.e., the property could be redeveloped for *unrestricted residential use*).

No HRECs were identified.

Controlled Recognized Environmental Condition (CREC)

A CREC includes releases of hazardous materials or petroleum products that are allowed to remain in place following closure by a regulating agency, but the site is subject to implementation of required controls (e.g., Target Property use restrictions, Activity Use Limitations [AULs], deed restrictions, engineering controls, or remediation systems, etc.).

No CRECs were identified.

Vapor Encroachment Condition (VEC)

In accordance with ASTM E 1527-13, the potential for a Vapor Encroachment Condition (VEC) must be addressed during standard Phase I ESAs. VECs are evaluated using the Vapor Encroachment Screen (VES), a two-Tier process. The VES process does not evaluate the potential for vapor intrusion (VI) of subsurface vapors into existing buildings. Evaluation of VI conditions requires field sampling, and is not included in ASTM E1527-13.

Using the VES process, no VECs were identified:

De Minimis Conditions

De minimis environmental conditions include:

- Historical agricultural use is considered a de minimis condition. The User should note that former
 agricultural use may indicate the presence of residual pesticides and/or herbicides in the
 subsurface.
- Empty propane canisters in the areas currently or historically occupied by homeless individuals.
- Small quantities of concrete debris are present several low-lying areas, indicating construction debris has been deposited on the Target Property. No stains or distressed vegetation were observed.

Data Gaps

No data gaps deemed significant to the findings, conclusions, and recommendations of this Phase I ESA report were identified.

Conclusions

Available documentation has provided environmental information to support the following conclusions:

- The Target Property historically was utilized for agricultural purposes from as early as the 1940s through the 1970s, and later remained an undeveloped, open field utilized for off-road vehicular traffic.
- No evidence of permanent structures was identified in aerial photographs or other available documentation.
- The Target Property is located in an area with mostly residences, CCC governmental offices, or undeveloped parcels.
- No features of significant environmental concern were identified.
- No environmental sites were identified in the radius report that are likely to pose significant environmental risk to the Target Property. The Target Property is adjacent to a county pump station.

Opinion

It is the opinion of the Environmental Professional that research performed in this Phase I ESA substantially complies with the scope and limitations of ASTM E 1527-13 and EPA AAI Rule. Exceptions and/or limiting conditions (where applicable) are discussed in Section 1.6.

It is the opinion of the Environmental Professional that all environmental reports, including this Phase I ESA, should be submitted to the CUPA for review.

Recommendations

Based on the results of this assessment, ERG recommends no further investigation.

1.0 INTRODUCTION

Environmental Resources Group ("ERG") performed a Phase I Environmental Site Assessment ("ESA") of the Vacant Lot on Arnold Drive, Martinez, California (the "Target Property"), Contra Costa County Assessor's Parcel Numbers (APNs) 161-400-010-5 and 161-400-009-7 on behalf of Craig Chiappone (User or Client) (Figure 1).

ERG performed the Phase I ESA following the guidelines in the American Society of Testing and Materials (ASTM) Standard Designation E1527-13, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process," and the United States Environmental Protection Agency (USEPA) Standards and Practices for All Appropriate Inquiries (AAI), as required under Section 101(35)(b)(ii) and (iii) of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (EPA AAI Rule) and Code of Federal Regulations (40 CFR) 312.

1.1 PURPOSE

The purpose of this Phase I ESA is to identify existing or potential Recognized Environmental Conditions (RECs), Historical RECs (HRECs), or Controlled RECs (CRECs) (as defined by ASTM Standard E1527-13 and EPA AAI Rule) in connection with the Target Property, as well as to provide appropriate inquiry into the previous ownership and use of the Target Property (where applicable).

ERG understands that this Phase I ESA is being conducted for purposes of a sale of the Target Property, and that the proposed future use will remain the same as its historical use as a plant nursery.

1.2 SCOPE OF SERVICES

ERG has performed an ESA on the Target Property in general conformance with the scope and limitations of ASTM Practice E1527-13 and EPA AAI Rule. Any exceptions to or deletions from this practice are described in Section 1.6 of this report.

The Scope of Services includes "All appropriate inquiry into the previous ownership and uses of the Target Property consistent with good commercial or customary practice", as defined in 42 USC 9601(35) (B). The Scope of Services includes observations for RECs, as well as a review of *reasonably ascertainable information* in regulatory files provided within reasonable time and cost constraints. Accordingly, it cannot be guaranteed that all files are examined, or that every contingency is investigated. These limitations are in conformance with the stated guidelines of ASTM E1527-13. An evaluation of business environmental risk associated with a parcel of commercial real estate is not included in this assessment.

In accordance with ASTM E1527-13, the Scope of Services for Phase I ESAs generally consists of the following tasks²:

• Acquiring available site-specific information (e.g., title, environmental lien information, former environmental investigation documentation, etc.) regarding the Target Property from the User.

² Based on availability of documents and key personnel.

- Providing key site personnel (e.g., owner, property manager, etc.) an Environmental Questionnaire to evaluate current and historical uses of the Target Property.
- Reviewing an Environmental Data Resources, Inc. (EDR) Radius Map Report (radius report) with GeoCheck® (Radius Report) to identify potential issues of environmental concern at the Target Property, and within the Target Property vicinity.
- Researching and reviewing readily available Local regulatory agency (i.e., Certified Unified Program Agency [CUPA]) files and online State database files. The records review includes files for the Target Property available at State, County, and/or Local offices or online databases. Where available, records were reviewed for adjacent properties identified in the Radius Report, as appropriate. In some cases, the status of a site may be determined from telephone interviews of staff persons of these offices.
- Reviewing historical aerial photographs, Sanborn Fire Insurance Maps (Sanborn Maps), historical topographic maps, and city directories, where available.
- Performing a site reconnaissance of the Target Property and nearby properties, including photo-documenting current property conditions. The site reconnaissance consists of an inspection of conditions at the Target Property, and identification of nearby property uses. Interviews are conducted of persons associated with the Target Property (e.g., the current owner or occupant) who are reasonably available at the time of the site reconnaissance, and by telephone when such interviews are possible.
- Interviewing readily available persons with knowledge of the Target Property and/or surrounding properties.
- Evaluating the potential for vapor encroachment onto, or within, the Target Property, in accordance with ASTM E1527-13.³
- Preparing a report presenting the findings, conclusions, and recommendations of the Phase I ESA research.

The Scope of Services for this Phase I ESA does not include analysis of Controlled Substances (CS), Asbestos-Containing Materials (ACM), lead-based paint (LBP), or other non-CERCLA related conditions. Licensed professionals should be contacted to assess their potential presence if there is suspicion that these substances or conditions are on the Target Property.

³ The User(s) should be aware that the VES process does not evaluate the potential for vapor intrusion (VI) into existing buildings from subsurface vapors. Evaluation of VI conditions requires field sampling, and is not included in ASTM E1527-13.

1.3 USER RELIANCE

This Phase I ESA report is for the exclusive use of Craig Chiappone, his Agents and Assignees, financing institutions involved in the financing of the sale and/or development of the Target Property, and any relevant and prevailing regulatory agency. Use of this report by any other party shall be at such party's sole risk.

1.4 USER-PROVIDED INFORMATION

ERG was provided a Preliminary Title Report for the Target Property by the User (Client). The Preliminary Report was prepared by First American Title Company, National Commercial Services, of Walnut Creek, California, and is dated July 23, 2015 (Order Number NCS-745192-CC). The owners of the Target Property are listed as Hill Valley Oaks, LLC.

No environmental cleanup liens were identified in the Preliminary Title for the Target Property.

The User has no specialized knowledge and experience related to the history of the site, except as described in the documents shown above.

1.5 SIGNIFICANT ASSUMPTIONS

ERG informs the Client that there is a possibility that even with the proper application of the methodologies employed in this ESA, conditions may exist on the Target Property that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information.

Significant assumptions regarding this Phase I ESA are summarized below:

- This Phase I ESA is intended to assess environmental conditions of the specific parcels of commercial real estate.
- This Phase I ESA reflects a commercially prudent and reasonable inquiry designed to identify RECs in connection with a Target Property.
- ERG believes that the Target Property information obtained from the review of various source records and interviews is reliable. However, ERG cannot and does not warrant or guarantee that the information provided by these sources is accurate or complete.
- All information regarding operations, plans, specifications, conditions, or test data which is
 provided to ERG by Client, owners or third parties (including without limitation, any point of
 contact at the Target Property), is deemed by ERG to be correct and complete without any
 independent verification by ERG. ERG assumes no responsibility for the accuracy of such
 information and shall not be liable if reliance on such information results in incorrect conclusions
 or results.

1.6 LIMITATIONS AND EXCEPTIONS

This Phase I ESA was conducted in a manner consistent with that level of care and skill ordinarily exercised by members of the profession currently practicing in the same locality under similar conditions. The findings and conclusions contain all of the limitations inherent in these methodologies that are

referred to in ASTM E1527-13 and the EPA AAI Rule. It is understood by the parties hereto that the Client who has requested this assessment will use this assessment to provide environmental information to the User(s) for purposes of a potential future sale and redevelopment of the Target Property for light industrial use (i.e., a plant nursery). ERG intends no other use or disclosure.

This report is issued with the understanding that it is to be used only in its entirety. The Scope of Services performed to complete this Phase I ESA was limited in nature. This service has been performed in accordance with generally accepted environmental investigation practices for similar investigations conducted at this time and in this geographic area. ERG must alert the Client that this evaluation may not reveal if hazardous substances or petroleum hydrocarbon releases have occurred on or near the Target Property, and this Phase I ESA does not guarantee the condition of the Target Property. Furthermore, the absence of potential gross contamination sources, historical or present, does not necessarily imply that the Target Property is free of contamination. ERG and its EP representative do not warrant or guarantee that no significant events or releases or conditions could have arisen during time periods with data gaps.

This assessment was not intended to predict future site conditions. A risk assessment was not performed, and the Scope of Services does not include a determination of the extent of business environmental risk, or the public health impact of known or suspected hazardous substances or petroleum hydrocarbons. This assessment does not address whether requirements in addition to All Appropriate Inquiry have been met to qualify for the innocent landowner, contiguous Target Property owner, or bona fide prospective purchaser limitations on liability protections under CERCLA. This assessment does not address any additional requirements or environmental assessment obligations of State or Local laws or Federal laws, other than the All Appropriate Inquiry provisions of the landowner liability protections.

ERG and its EP representative are not responsible for conditions or consequences arising from facts and information that were withheld or concealed, or not fully disclosed at the time this evaluation was performed. In accordance with ASTM E1527-13, to achieve the objectives of this project, ERG based its conclusions and recommendations upon *reasonably available* information obtained during the period the investigation was conducted, including: historical records, maps, aerial photographs, personal interviews, and/or records held by relevant government and private agencies. Consequently, this information is subject to the limitations of historical documentation, including availability, completeness, and accuracy of records, and the personal recollections of those persons contacted. ERG and its EP representative are not responsible for errors or omissions in agency files or public or private databases, or non-disclosure by Target Property owners or representatives.

The content and conclusions provided by ERG in this report are based solely on the information collected during our investigation and activities at the Target Property, our present understanding of the Target Property conditions, and our professional judgment in light of such information at the time this report was prepared. Part of the findings in this investigation is based on data provided by others. This report presents ERG's professional opinion, and no warranty, expressed or implied, is made. The Client has the right to reproduce in full and provide copies of this report to interested parties, including his Agents and Representatives.

The information and opinions rendered in the report are exclusively for use by the Client and its approved User(s). ERG will not distribute or publish this report without the Client's consent, except as required by law or court order. ERG and its Environmental Professional representative have no responsibilities or liability whatsoever to persons or entities other than the Client if they so choose to use this report.

1.7 SPECIAL TERMS AND CONDITIONS

The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting constraints imposed by the User. No subsurface exploratory drilling or sampling was done under the scope of this Phase I ESA. Unless specifically stated otherwise in the report, no chemical analyses have been performed during the course of this Phase I ESA.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This Phase I ESA is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

The content and conclusions provided by ERG in this report are based solely on the information collected during our investigation and activities at the Target Property, our present understanding of the Target Property conditions, and our professional judgment in light of such information at the time this report was prepared. Part of the findings in this investigation is based on data provided by others.

This report presents ERG's professional opinion, and no warranty, expressed or implied, is made. Craig Chiappone has the right to reproduce in full and provide copies of this report to interested parties, including his Agents and Representatives.

1.8 MATTERS KNOWN TO CLIENT

The Client, User(s), Target Property representative(s), or owner(s) should have provided ERG any and all information known to said persons which pertains to: (1) the existence or possible existence at, on, under or in the vicinity of the Target Property, of any hazardous substances or petroleum hydrocarbons; (2) any conditions at, on, under or in the vicinity of the Target Property, which might represent a potential safety hazard or danger to human health or the environment; (3) any permit, manifest, title record, lien or other record of compliance or non-compliance with any Federal, State or Local laws, or court or administrative order or decrees; which could affect the recommendations or conclusions reached by ERG in the performance of its services.

2.0 SITE DESCRIPTION

2.1 LOCATION AND LEGAL DESCRIPTION

The Target Property consists of two irregularly-shaped parcels (Contra Costa County [CCC] Assessor's Parcel Numbers [APNs] 161-400-010-5 and 161-400-009-7, in Martinez, California. The parcels have no specified address, but lie between 2050 Arnold Drive on the west, and 2530 Arnold Drive on the east. The parcels are listed as Vine Hill Homestead TR POR Lot 1 and Lot D-1.

The Target Property is approximately 1,780 feet west of Highway 680.

2.2 TARGET PROPERTY AND VICINITY CHARACTERISTICS

The Target Property is located in area consisting of residences, CCC-governmental offices, and open, undeveloped land. The Target Property consists of two open, undeveloped lots. Parcels 161-400-010-5

and 161-400-009-7 are approximately 183,823 and 37,897square feet, respectively, and are both zoned commercial.

2.3 CURRENT USE OF TARGET PROPERTY

The Target Property parcels are open, undeveloped fields with oak trees and poison oak bushes. The parcels appear to be naturally hilly (i.e., not fill-related), and contain an east-west trending drainage swale (with concrete culvert) along the low-lying area on the north. Unpaved gravel paths (with abundant truck tire tracks indicating off-road travel) and apparent walking trails are present throughout the property.

Several upland areas contain small homeless encampments with tents, food preparation areas, and discarded clothing. A limited amount of trash and used propane canisters are observed along the hilltop. Small areas containing concrete debris are present along the base of the hill.

2.4 HISTORICAL USE OF TARGET PROPERTY

Based on a review of available historical documents, the Target Property was first utilized for agricultural purposes as early as the 1940s. Small row crops were observed in aerial photographs until the 1970s, at which time the parcels no longer appeared to be maintained for crops. As the row crops disappeared, the Target Property became open fields with dirt roads that appeared to have been utilized for off-road vehicle traffic. The Target Property does not appear to have been developed at any time with permanent structures.

2.5 DESCRIPTION OF TARGET PROPERTY IMPROVEMENTS

The Target Property is undeveloped.

2.6 CURRENT USE OF ADJOINING PROPERTIES

Parcels adjacent to the Target Property are used for residential and CCC-government purposes:

- The Target Property is bounded on the north by Arnold Drive, followed by single- and multi-family residences.
- The Target Property is bounded on the east by the CCC Assessor's Office.
- The Target Property is bounded on the south by U.S. Highway 4 (John Muir Parkway).
- The Target Property is bounded on the west by single-family residences.

2.7 PHYSICAL SETTING SOURCES

2.7.1 Topography

The topography in the Target Property vicinity is hilly. The Target Property occurs at elevations ranging from approximately 112 to 145 feet above mean sea level (Google Earth Pro and EDR topographic maps; EDR, 2015). The lowest elevation occurs on the north side of the Target Property along Arnold Drive.

2.7.2 Geology

The geology in the vicinity of the Target Property consists of a stratified sequence of Cenozoic Age (Eocene) bedrock (EDR radius report). Soils consist of sandy loam (Gaviota), loam (Positas), clay loam (Lodo), loamy sand (Briones), and loam (Tierra).

2.7.3 Hydrogeology and Hydrology

According to the EDR radius report, groundwater is reported to flow to the north-northwest at one location within one mile of the Target Property. However, local variations in groundwater flow are expected to occur based on topography and pumping. Based on the immediate topography of the Target Property, groundwater is expected to flow from the highlands on the north (off property) and south, toward the low-lying swale drainage ditch on the north side of site. Groundwater beneath the Target Property vicinity is expected to occur at approximately 13 to 15 feet bgs, except along ridges, where it is expected to occur at deeper depths.

The Target Property is approximately 3.5 miles south of San Pablo Bay. According to the EDR radius report, the Target Property is outside the 500-year flood zone.

3.0 RECORDS REVIEW

As part of this assessment, ERG reviewed available agency files and records for the Target Property, environmental reports, and online regulatory databases (Appendices B-1 through B-7). A summary of historical use information obtained in this Phase I ESA is presented below, followed by summaries of the findings from environmental sources reviewed for the ESA.

3.1 REGULATORY AGENCY FILE REVIEW

The following sections summarize the review of available regulatory agency files.

3.1.1 State Water Resources Control Board (SWRCB) Geotracker Website

The SWRCB Geotracker website was developed primarily to document activities (i.e., investigation and remediation) at Leaking Underground Storage Tank (LUST) sites.

The Target Property is not listed on Geotracker.

3.1.2 Envirostor

Envirostor sites represent sites under the Department of Toxic Substances Control (DTSC; or CalEPA) (i.e., State and Tribal equivalents to Federal CERCLIS [Superfund]).

The Target Property is not listed on Envirostor.

3.1.3 CUPA – Contra Costa County Department of Health Services (SMCDHS)

The Certified Unified Program Agency (CUPA) is the consolidation of six state environmental programs into one program. This program was established under the amendments to the California Health and Safety Code made by SB 1082 in 1994. The six programs are the Hazardous Materials Business Plan/Emergency Response Plan, Hazardous Waste, Tiered Permitting, Underground Storage Tanks,

Aboveground Storage Tanks (SPCC only) and the Uniform Fire Code Hazardous Materials Management Plan.

The CUPA is a local agency that has been certified by DTSC to implement the six state environmental programs within the local agency's jurisdiction. The Contra Costa County Department of Environmental Health (CCCDEH) is the CUPA for the Target Property. The CCCDEH stated they had no files for the Target Property and referred ERG to the CCCDEH Hazardous Materials Division (CCCHMD).

The CCCDEH stated they had no files for Parcel 161-400-009 of the Target Property. Files for 161-400-010 included a permit for installation of four soil borings in October 2009 (drilling conducted by Exploration Geoservices under the direction of consultant Cornerstone Earth Group), and a narrative for the boring file indicating backfilling of the borings and closure of the permit. According to the permit, the borings were 6-inch diameter and were drilled to a depth of a maximum depth of 39 feet below ground surface (bgs).⁴

3.2 STANDARD ENVIRONMENTAL RECORD SOURCES

Standard environmental record sources reviewed in this Phase I ESA included aerial photographs and historical topographic maps, Sanborn Fire Insurance Maps, Richmond City Directories, an Environmental Data Resources, Inc. (EDR) Radius Report, and an EDR Environmental Lien and AUL Search Report. The reports are presented in Appendices B-2 through B-6.

3.2.1 Aerial Photographs

For this Phase I ESA, historical aerial photographs from EDR and Google Earth (GE) between 1939 and the present were reviewed to identify areas of potential environmental concern. The aerial photographs are presented in Appendix B-2. The aerial photograph review is summarized below:

- 1939, 1946, 1949, 1950, and 1958 The Target Property is agricultural, with small row crops extending through both parcels. Adjacent properties to the north appear to contain orchards and a ranch house. The property to the east is undeveloped, and appears to have off-road vehicle tracks. U.S. Highway 4 is present to the south, followed by undeveloped land. The property to the west appears to contain open land and a ranch house. By 1958, a small area containing unidentifiable objects appear along the boundary with the adjoining property to the west of the Target Property.
- 1968 By this year, the row crops on the Target Property appear to be less organized, and overgrowth with trees has occurred in some areas. The property to the north appears more developed with structures.
- 1974 By this year, the Target Property no longer appears to have maintained crops. A small structure or vehicle is present on the north (the photograph is not clear enough to discern the structure).
- 1982 The Target Property appears the same as the previous year. Residences have been constructed to the west.

_

⁴ The purpose of the soil borings is not stated in the permit. However, the borings are assumed to be non-environmental, and related to a geotechnical investigation for a potential redevelopment of the Target Property by Hill Valley Oak Apartments.

- 1993 The Target Property appears the same as the previous year. The small pump house on the north (situated between the Target Property parcels) has been constructed. The surrounding properties appear the same as today.
- 1998, 2005, 2006, 2009, 2010, and 2102 The Target Property and surrounding properties appear the same as today.

No evidence of development, dumping, or filling was observed in the aerial photographs reviewed.

3.2.2 Historical Topographic Maps

Select historical topographic maps from 1897 to 1980 were reviewed to identify significant changes in ground surface elevations that may indicate fill areas, and other pertinent features of potential environmental concern (Appendix B-3).

No features likely to pose significant environmental risk to the Target Property were identified.

3.2.3 Sanborn Fire Insurance Maps

No Sanborn Fire Insurance Map coverage was located for the Target Property. The Sanborn Map Report of No Coverage is included in Appendix B-4.

3.2.4 City Directories

No city directories were obtained for the subject Target Property because there is no official address associated with the parcels, and the site has never been occupied by a business or entity.

3.2.5 Environmental Radius Report

An EDR Radius Map (radius report) was reviewed for the Target Property and surrounding sites within up to a one-mile radius of the Target Property. This information was reviewed for local, state, and federal listings for cases pertaining to leaking USTs and ASTs, hazardous waste sites, and abandoned sites within the standard radii established by the ASTM. Results of the major database searches are discussed below. Minor databases are discussed if deemed relevant by the EP. In some cases, location information supplied by the regulatory agencies is insufficient to allow the database companies to identify facility locations. These facilities are listed as "un-locatable" sites in the database report. A copy of the radius report is included in Appendix B-6.

3.2.5.1 Subject Target Property

The Target Property is listed not listed on any environmental databases in the radius report.

3.2.5.2 Surrounding Properties

The following paragraphs summarize the findings of the EDR radius report search. Surrounding properties that pose potential environmental risk to the Target Property based on their hydrogeologic locations and proximity to the Target Property are discussed in greater detail beneath the radius report summary. In this area, the predominant groundwater flow direction is expected to be toward the San Pablo Bay (i.e., to the northwest). For purposes of this evaluation, sites that are located southeast of Target Property are considered "upgradient".

State and Federal Regulatory Review

Federal NPL

The National Priorities List (NPL) is the EPA's database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the Superfund Program. No NPL sites are located within one mile of the Target Property.

Federal CERCLIS and CERCLIS NFRAP Lists (CERCLIS)

The Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) list is a compilation of sites that the EPA has investigated or is currently investigating for a release or threatened release of hazardous substances. The CERCLIS No Further Remedial Action Planned (NFRAP) list is a compilation of sites that the EPA has investigated and has determined that the facility does not pose a threat to human health or the environment, under the CERCLA framework. No CERCLIS or CERCLIS NFRAP sites are listed within one-half mile of the Target Property.

Federal Resource Conservation and Recovery Act (RCRA) CORRACTS Facilities List

The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The CORRACTS database is the EPA's list of treatment storage or disposal (TSD) facilities subject to corrective action under RCRA. One RCRA CORRACTS site is listed within one mile of the Target Property.

Federal Resource Conservation and Recovery Act (RCRA) Non-CORRACTS Treatment Storage and Disposal (TSD) Facilities List

The RCRA TSD database is a listing of reporting facilities that treat, store or dispose of hazardous waste. A listing in this database does not imply a release has occurred at the site, or that there are corrective actions required at a facility. No RCRA TSD sites are listed within one-half mile of the Target Property.

Federal RCRA Generator List

The RCRA program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Generator database is a compilation by the EPA of reporting facilities that generate hazardous waste, and includes Large Quantity Generators (LQG) and Small Quantity Generators (SQG). A listing in this database does not imply a release has occurred at the site, or that corrective actions are required at a facility. No LQG or CESQG facilities are within one-quarter mile of the Target Property.

Federal Institutional Control/Engineering Controls Registry (Controls)

The U.S. EPA maintains an Engineering Controls and Institutional Controls Site List. No Controls sites listed are listed within one-half mile of the Target Property.

Federal Emergency Response Notification System (ERNS)

The Emergency Response Notification System (ERNS) is a national database used to track incidents where there has been a reported release of oil or hazardous substances to the environment. The Target Property is not listed on the ERNS database.

Response

Response sites are State and Tribal equivalents to National Priority List (NPL) sites. No Response sites are located within one mile of the Target Property.

Envirostor

Envirostor sites are DTSC State and Tribal equivalents to CERCLIS sites. Three (3) Envirostor sites are listed within one mile of the Target Property.

SWF/LF

SWF/LF is a database that documents State and tribal landfill and solid waste disposal sites. No SWF/LF sites are located within one-half mile of the Target Property.

State Leaking Underground Storage Tank List (LUST)

The SWRCB compiles lists of sites at which leaks of hazardous substances from USTs have occurred. One Completed-Case Closed LUST case is listed within one-half mile of the Target Property.

In fuel leak cases, research conducted in the State of California by Lawrence Livermore National Laboratory (LLNL) in 1996 indicates that attenuation and degradation of the product in groundwater play major roles in reducing the hydrocarbon contamination to non-detectable levels within several hundred feet of the contaminant source. Moreover, this research indicates that in over 90% of the hydrocarbon contamination cases, with the possible exception of MTBE or other fuel oxygenates, groundwater contaminant plumes do not extend more than 250 feet from the source. Solvent/toxic contamination plumes may extend farther from the source.

Based on the discussion above, fuel leak LUST sites that are within one-eighth mile in the upgradient direction, and upgradient solvent or toxic leak sites are considered to have potential risk to the subsurface soils and/or groundwater of the Target Property.

No LUST sites are located within one-eighth mile of the Target Property.

Spills, Leaks, Investigations, and Cleanups (SLIC)

The SLIC database lists sites with known spills, leaks, investigations, and cleanups within one-half mile of the Target Property. No SLIC sites are located within one-half mile of the Target Property.

State Underground Storage Tank List (UST)

The SWRCB compiles a list of UST locations. One UST site is located within one-quarter mile of the Target Property. No spills or releases associated with the site were identified.

State Above-ground Storage Tank List (AST)

This database includes permitted active, inactive and closed AST facilities recorded with the state. The Target Property is not listed on this database, as this database does not include compressed gas tanks. No AST sites were listed within one-quarter mile of the Target Property.

Local Brownfields Cleanup and Reuse Database (US BROWNFIELDS)

The California Department of Toxic Substance Control (DTSC) maintains the Brownfields Cleanup and Reuse Database of sites that have known contamination or sites for which there may be reasons for further investigation. No US BROWNFIELDS sites were listed within one-half mile of the Target Property.

Additional Environmental Records

Local Lists of Landfill/Solid Waste Facilities (Local SWF/LF)

A database of landfill facilities is prepared by the California Integrated Waste Management Board. No SWRCY/LF facilities are listed within one-half mile of the Target Property.

Deed Restriction Sites (DEED)

Deed Restriction sites are typically sites within other regulatory programs that have achieved closure through a deed restriction process. No DEEDs sites are listed within one-half mile of the Target Property.

Other Ascertainable Records

There are several other ascertainable records in the EDR radius report, but many of them overlap with the records stated above (see EDR Radius Report). Database listings that are considered relevant for this evaluation are discussed further below.

Toxic Pits

There are three Toxic Pit sites within one mile of the Target Property. The pits are located downgradient of and/or at a distance proximal to the Target Property that spills or releases associated with the sites are not expected to pose significant environmental risk to the Target Property.

Formerly Used Defense Site List (FUDS)

The California Department of Toxic Substance Control (DTSC) maintains a list of Formerly Used Defense Sites (FUDS) and Department of Defense (DOD) sites. No FUDS sites are listed within one mile of the Target Property.

Contra Costa County Site List (CCCSL), HAZNET, and EMI

These databases include businesses that maintain Hazardous Materials Business Plans, are Hazardous Waste Generators, and/or maintain USTs. Three CCCSL sites are listed within one-quarter mile of the Target Property.

EDR US Historical Auto Stations

This is a proprietary database under EDR's High Risk Historical Records. No Historical Auto Stations are located within one-eighth mile of the Target Property.

EDR US Historical Cleaners

This is a proprietary database under EDR's High Risk Historical Records. No Historical Cleaners site are located within one-quarter mile of the Target Property.

Discussion

The Target Property lies within an area that historically and currently is mostly residential, CCC-government offices, or undeveloped, open or agricultural land. The nearest environmental site is the CCC Sheriff Forensic Muir Lab, approximately 943 feet southwest of the Target Property, across U.S. Highway 4. The site is listed as a CCCSL and on HAZNET. No spills or releases associated with the site have been identified. Therefore, the site is not expected to pose significant environmental risk to the Target Property. Similarly, the next nearest site is the CCC Forensic Services Summit Center, located east of the Target Property. The site is listed as a CCCSL site. No spills or releases associated with the site have been identified. Therefore, the site is not expected to pose significant environmental risk to the Target Property.

No environmental sites were identified in the radius report that are likely to pose significant environmental risk groundwater beneath the Target Property.

3.3 SPECIALIZED KNOWLEDGE, EXPERIENCE, AND ACTUAL KNOWLEDGE OF THE USER

According to the ASTM standard, it is the User's responsibility to communicate any information that is pertinent to the identification of RECs at the Target Property based on specialized knowledge, experience, and actual knowledge of the User. User-provided environmental reports, if available, are discussed in Section 3.9.

3.4 COMMONLY KNOWN AND REASONABLE ASCERTAINABLE INFORMATION

According to the ASTM standard, it is the User's responsibility to communicate any information that is reasonably known or ascertainable regarding RECs at the Target Property. The User provided no additional environmental information for the Target Property.

3.5 CHAIN-OF-TITLE

According to ASTM E1527-13 standard, the EP is not responsible for review of recorded land title records or judicial records for environmental liens or AULs. The User did not provide this documentation, and a 50-year chain-of-title was not requested by the User for this investigation.

3.6 ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

According to the ASTM E1527-13 standard, the User is required to provide and/or report to the EP any environmental liens or AULs identified for the Target Property. The EP was not provided lien or AUL documentation for this Phase I ESA. The current owner, Mr. Victor Sasuga, President of Colorvue Growers, stated in his environmental questionnaire that he was unaware of any environmental liens on the Target Property.

The User provided a Preliminary Title Report, as discussed previously. No environmental liens were identified in the report (Appendix B-7).

3.7 ADDITIONAL ENVIRONMENTAL RECORD SOURCES

The User provided no environmental documents for the Target Property.

4.0 INTERVIEWS AND ENVIRONMENTAL QUESTIONNAIRES

An environmental questionnaire was submitted to the current owner of the Target Property, Mr. Charles Clark. Mr. Clark stated he was unaware of any:

- . Environmental issues associated with the Target Property.
- . Environmental liens or AULs associated with the Target Property.
- . Chemical use at the Target Property.
- . Underground storage tanks at the Target Property.
- . Signs of contamination on the Target Property.

Mr. Clark stated: (1) the Target Property is a vacant lot, and (2) the price being paid reasonably reflects the value of the Target Property (Appendix C)

.5.0 SITE RECONNAISSANCE

The Target Property was inspected by the ERG representative on September 1, 2015.

5.1 GENERAL SITE CHARACTERISTICS

The Target Property consists of two undeveloped parcels, 161-400-010-5 and 161-400-009-7, along Arnold Drive in Martinez. The parcels are open fields with oak trees and poison oak bushes. The parcels appear to be naturally hilly (i.e., not fill-related), and contain an east-west trending drainage swale (with concrete culvert) along the low-lying area on the north. Several upland areas contain small homeless encampments with tents, food preparation areas, and clothing. Trash and used propane canisters are observed along the hilltop. Small areas containing concrete debris are present along the base of the hill. Unpaved gravel paths (with abundant truck tire tracks indicating off-road travel) and apparent walking trails are present throughout the property.

Target Property features are described below:

5.2 TARGET PROPERTY FEATURES, UTILITIES, AND MECHANICAL SYSTEMS

Significant property features at the Target Property are summarized below:

FEATURES	COMMENTS	
Roads	The Target Property is accessed from Arnold Drive on the north. Evidence of off-road vehicular traffic is present throughout the site, with abundant truck tracks along dirt paths.	
Wells and Cisterns	None identified.	
Aboveground Storage Tanks (ASTs)	No evidence of ASTs at the Target Property was identified, either in the site visit, or historical documents	
Underground Storage Tanks (USTs)	No evidence of USTs at the Target Property was identified, either in the site visit, or historical documents.	
Surface Water Drainage and Storm Drains	Surface water at the Target Property drains toward low-lying areas along the north side of the Target Property. Storm drains are present along Arnold Drive on the north of the Target Property. A drainage swale with a	

	(partial) concrete culvert is present in the low-lying area along the north side of the site.			
Utilities	Electricity and gas is not provided to the Target Property.			
Chemical and Waste Chemical Storage and Disposal	No evidence for waste storage disposal was identified.			
Sewage Treatment	None identified.			
Potable Water Source	None identified.			
Wastewater Treatment	No indications of onsite industrial wastewater disposal or treatment facilities were observed during the onsite reconnaissance.			
Transformers	No transformers were observed.			

5.3 POTENTIAL ENVIRONMENTAL CONDITIONS

Potential environmental conditions at the Target Property are summarized below:

CONDITION	COMMENTS	
Hazardous Materials or	None identified.	
Petroleum Products	Empty propane canisters associated with vagrant food preparation are present along the ridge at various locations.	
Evidence of Releases	No excessively stained areas, stressed vegetation, or other evidence of surface chemical releases was observed during the site reconnaissance.	
Polychlorinated Biphenyls (PCBs)	None identified.	
Landfills	None identified.	
Pits, Ponds, Lagoons, Sumps, Catch Basins	None identified.	
Radiological Hazards	None identified.	
Additional Hazard Observations	None identified.	
Lead-Based Paint (LBP)	A LBP survey was not conducted for this investigation.	
Potential Asbestos- Containing Materials	An asbestos survey was not conducted for this investigation.	

6.0 EVALUATION OF POTENTIAL FOR VAPOR ENCROACHMENT CONDITIONS

In accordance with ASTM E1527-13, Phase I ESAs should include evaluation of vapor encroachment conditions (VECs) at a Target Property. Thus, a Vapor Encroachment Screening (VES) was performed in general accordance with ASTM E2600-10, Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions to evaluate if a VEC is present, or likely present, at the Target Property. Volatile organic compounds (VOCs) of potential VEC concern include, but are not limited to: chlorinated solvents (CVOCs such as tetrachloroethylene [PCE], trichloroethylene [TCE], vinyl chloride, etc.) and aromatic petroleum hydrocarbons (e.g., benzene and ethylbenzene).

6.1 VAPOR ENCROACHMENT SCREENING PROCESS

The ASTM E2600-10 VES process may include a two-tiered screening process. Initially, the Tier 1 VES focuses on known or suspected contaminated properties located within the area of concern (AOC). According to ASTM E2600-10, "the AOC is one third of a mile around the TP [Target Property], unless the use of a shorter distance (such as for petroleum hydrocarbon constituents of concern [COCs]) is appropriate. The AOC is measured from the TP to a contaminated property with known or suspect COC contamination of soil or groundwater or both." "If there are known or suspect property sources of contamination within the AOC, the environmental professional should evaluate whether COC may be present at the TP.

"For a contaminated property identified in Tier 1 located cross-gradient from the TP, the AOC will be the area within the critical distance plus one half of a reasonable estimation of the contaminated plume width (at the point nearest the closest TP boundary) that might be associated with the nearby known or suspect contaminated property (that is, the contaminated property where the groundwater contamination originated)."

ASTM E2600-10 states that if a VEC cannot be ruled out in the Tier 1 screen, the user can undertake more refined screening, as provided in Tier 2. "Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to evaluate whether or not a VEC can be ruled out. Tier 2 has two data collection components: one non-invasive and one invasive.

The objective of the non-invasive Tier 2 process is to identify through documentation, information regarding plume lengths and contaminants, remediation status, etc. The non-invasive Tier 2 VES uses a plume test and critical distance determination to evaluate whether vapors from the contaminated property might migrate to and encroach upon the Target Property. The critical distance between the Target Property and a contaminated plume is defined by E2600-10 as 30 feet (9 meters) for dissolved petroleum hydrocarbons, and 100 feet (30.5 meters) for separate-phase product petroleum hydrocarbons and non-petroleum chemicals of concern ("COCs") such as CVOCs). Contaminated groundwater plumes within these distances may constitute a VEC to the Target Property.

The User should be aware that:

- The presence of a VEC does not necessarily constitute a REC. The EP is to determine if the VEC represents a REC for the Target Property.
- The VES process does not evaluate the potential for vapor intrusion (VI) of subsurface vapors into existing buildings. Evaluation of VI conditions requires field sampling, and is not included in ASTM E1527-13.

6.2 EVALUATION

No sites with VOCs were identified within the VES critical distances discussed in Section 6.1. No evidence of VOCs on the Target Property was identified in either historical documents, regulatory agency documents, or during the site reconnaissance.

6.3 VEC CONCLUSIONS

Based this evaluation, no evidence for a VEC was identified.

7.0 FINDINGS AND CONCLUSIONS

ERG has performed this Phase I ESA in conformance with the scope and limitations of ASTM E 1527-13 and EPA AAI Rule for the Target Property located along Arnold Drive, in Martinez, California. Any exceptions to or deletions from this practice are described in Section 1.6 of this report.

7.1 RECOGNIZED ENVIRONMENTAL CONDITIONS (RECS)

No RECs were identified.

7.2 HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITION (HRECS)

HRECs include chemical releases that occurred in the past, but resulting concentrations of hazardous materials or petroleum products in soil and/or groundwater remain within the regulating agency health criteria, and the site has been closed by said agency *without* land use restrictions (i.e., the property could be redeveloped for *unrestricted residential use*).

No HRECs were identified.

7.3 CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITION (CRECS)

A CREC includes releases of hazardous materials or petroleum products that are allowed to remain in place following closure by a regulating agency, but the site is subject to implementation of required controls (e.g., Target Property use restrictions, Activity Use Limitations [AULs], deed restrictions, engineering controls, or remediation systems, etc.).

No CRECs were identified.

7.4 VAPOR ENCROACHMENT CONDITIONS (VECS)

In accordance with ASTM E 1527-13, the potential for a Vapor Encroachment Condition (VEC) must be addressed during standard Phase I ESAs. VECs are evaluated using the Vapor Encroachment Screen (VES), a two-Tier process. The VES process does not evaluate the potential for vapor intrusion (VI) of subsurface vapors into existing buildings. Evaluation of VI conditions requires field sampling, and is not included in ASTM E1527-13.

Using the VES process, no VECs were identified.

7.5 DE MINIMIS ENVIRONMENTAL CONDITIONS

De minimis environmental conditions include:

- Historical agricultural use is considered a de minimis condition. The User should note that former
 agricultural use may indicate the presence of residual pesticides and/or herbicides in the
 subsurface.
- Empty propane canisters in the areas currently or historically occupied by homeless individuals.
- Small quantities of concrete debris are present several low-lying areas, indicating construction debris has been deposited on the Target Property. No stains or distressed vegetation were observed.

7.6 DATA GAPS

No data gaps deemed significant to the findings, conclusions, and recommendations of this Phase I ESA were identified:

7.7 OPINION

It is the opinion of the Environmental Professional that research performed in this Phase I ESA substantially complies with the scope and limitations of ASTM E 1527-13 and EPA AAI Rule. Exceptions and/or limiting conditions (where applicable) are discussed in Section 1.6. It is the opinion of the Environmental Professional that all environmental reports, including this Phase I ESA, should be submitted to the CUPA for review.

7.8 DEVIATIONS

This Phase I ESA substantially complies with the scope of services and ASTM E 1527-13 and EPA AAI RULE, except for exceptions and/or limiting conditions as discussed in Section 1.6.

7.9 CONCLUSIONS

Available documentation has provided environmental information to support the following conclusions:

- The Target Property historically was utilized for agricultural purposes from as early as the 1940s through the 1970s, and later remained an undeveloped, open field used for off-road vehicular traffic.
- No evidence of permanent structures was identified in aerial photographs or other available documentation.
- The Target Property is located in an area with mostly residences, CCC governmental offices, or undeveloped parcels.
- No features of significant environmental concern were identified.

8.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

Professional as defined in §312.10 of 40C	FR Part 312.
of the nature, history, and setting of the s	n education, training and experience to assess a Target Propertubject Target Property. I have developed and performed the a the standards and practices set forth in 40 CFR Part 312.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of Env. Resource Group, Inc on Aug 20, 2015.

TARGET PROPERTY

ARNOLD DR

Martinez, CA 94553

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

GLOSSARY

General Building Department concepts

- ICC: The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections): This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- Jurisdiction: This is the geographic area representing the properties over which a Permitting Authority has
 responsibility.
- GC: General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- Journeymen: Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- HVAC (Mechanical, Heating & Air companies): HVAC = Heating, Ventilation, and Air Conditioning.
- ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release): Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- "Pull" a permit: To obtain and pay for a building permit.
- CBO: Chief Building Official
- Planning Department: The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- Zoning Department: The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- Zoning District: A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- PIN (TMS, GIS ID, Parcel#): Property Identification Number and Tax Map System number.
- State Card (Business license): A license card issued to a contractor to conduct business.
- Building Inspector (Inspector): The inspector is a building department employee that inspects building construction for compliance to codes.
- C.O.: Certificate of Occupancy. This is the end of the construction process and designates that the owners
 now have permission to occupy a structure after its building is complete. Sometimes also referred to as a
 Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000 Permit Type: Bldg -

New Permit Number: 101000000405 Status: Valuation: \$1,000,000.00 Contractor Company: OWNER-BUILDER

Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

The EDR Aerial Photo Decade Package

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Env. Resource Group, Inc were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

<u>Year</u>	Target Street	Cross Street	<u>Source</u>

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/10/2015 has revealed that there is 1

CORRACTS site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
IT CORP ENVIRON SERV	4575 PACHECO BLVD	NNW 1/2 - 1 (0.960 mi.)	B10	41

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 05/04/2015 has revealed that there are 3 ENVIROSTOR sites within approximately 1 mile of the target property.

Status: Refer: RCRA

date9: 1/8/2002

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 06/15/2015 has revealed that there is 1 LUST site within approximately 0.5 miles of the target property.

Facility Status: Case Closed				
Global Id: T0601300283				

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 06/15/2015 has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

Toxic Pits: The Toxic Pits Cleanup Act Sites database identifies sites suspected of containing hazardous substances where cleanup has not yet been completed. The data come from the State Water Resources Control Board.

A review of the Toxic Pits list, as provided by EDR, and dated 07/01/1995 has revealed that there are 3 Toxic Pits sites within approximately 1 mile of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there is

1 SWEEPS UST site within approximately 0.25 miles of the target property.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order

should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to

represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as

cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as

dairy waste ponds.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Version Date: 2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

WALNUT CREEK

YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

	LOCATION	GENERAL DIRECTION
MAP ID	FROM TP	GROUNDWATER FLOW
1	1/2 - 1 Mile ESE	Not Reported
2	1/2 - 1 Mile ENE	Not Reported
3	1/2 - 1 Mile NNW	NNW

For additional site information, refer to Physical Setting Source Map Findings.

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: GAVIOTA

Soil Surface Texture: sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high

water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 43 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information									
	Вои	ındary		Classification		Saturated hydraulic			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		Soil Reaction (pH)		
1	0 inches	16 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.3 Min: 6.1		
2	16 inches	20 inches	unweathered bedrock	Not reported	Not reported	Max: 14 Min: 1.4	Max: Min:		

Soil Map ID: 2

Soil Component Name: POSITAS

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high

water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EDR Environmental Lien and AUL Search

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- · search for parcel information and/or legal description;
- · search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.

Please contact EDR at 1-800-352-0050 with any questions or comments.
